Complex Type: CdaHeaderMetadata

Description

CDA Header Metadata DTO. This object contains the metadata that is required to be used within a generated CDA Document, such as the CDA Header and other data within the CDA Document that is not gathered from HL7 messages passed into eHISC from the DatabaseLoader. Some data may be available from an HL7 feed, however it may not be sent to eHISC before it is actually required when generating the CDA document and thus this information is also required in this metadata.

2.3.1 Methods: ConsentService**Methods**

Name	Description
CheckConsent	Finds out whether eHISC has recorded an explicit request to upload or a withdrawal of consent to upload clinical documents for a specified episode.
GetPatientParticipationStatus	Gets the participation status for a single hospital patient record. This involves checking both the HI Service and the PCEHR System, as well as local consent records. If we do not have a valid IHI then the patient is not considered participating. We cannot upload a discharge summary for a patient without a valid IHI. If the patient has explicitly consented to the upload of any of the discharge summaries from a hospital then they are considered participating in that hospital only. If the patient has an advertised PCEHR, then we assume they do want their discharge summary to be uploaded to PCEHR. With no advertised PCEHR and no explicit consents in the hospital, we assume the patient will not expect that hospital to upload the discharge summary.

Name	Description
GetRecentPatientParticipationStatus	For patients in hospitals that have a code in the given hospital code system (e.g. those which use a particular PAS or CIS), This service will obtain the participation status for all patients with changes to their episodes since the given date/time.
RecordConsent	Record the withdrawal of consent to upload a discharge summary for a particular episode, or reverse that action. In order to check or record the consent to upload the discharge summary to PCEHR for an episode, the clinical system must specify the admission date/time of the episode within a configured tolerance. If there is no unique match to an episode then an error will be returned and the situation may be investigated by the system administrator.
RecordDisclosure	Record whether the patient has disclosed the existence of a PCEHR.

Enumeration

Value	Description
SystemError	The application failed. Details recorded within the application database.
OK	The request executed correctly
InvalidPatient	The patient was not found with the specified search data
InvalidHospital	The hospital was not found with the specified search data
InvalidEpisode	The episode was not found with the specified search data
InvalidDocument	The document was not found with the specified search data
InvalidUser	The user was not correctly specified
HiServiceError	The HI service returned an error
PcehrServiceError	The PCEHR service returned an error
InvalidIhi	The patient's IHI could not be found or validated
ConsentWithdrawn	The document could not be uploaded because consent was withdrawn
CouldNotAddToQueue	eHISC could not add the operation (upload or remove) to the MSMQ queue. This can happen if the queue is full. The calling system should retry the operation.
InvalidAccessCode	The Access Code is invalid.
DemographicMismatchWarning	Demographics in the downloaded document did not match those in the local system. This will occur when the Date of Birth, Sex or Family Name are different.
UnresolvedIhiAlert	The IHI for this patient has an unresolved alert. This patient's PCEHR cannot be accessed until the alert has been resolved.
DatabaseError	The operation could not be completed because the local SQL Server database is unavailable. The calling system should retry the operation.
InvalidDateOfBirth	The date of birth stored for the patient does not match the date of birth that was specified in the request.
PcehrServiceWarning	The action was successful but returned one or more warnings that should be investigated as available resources permit.
PcehrServiceUnavailable	The PCEHR Service is temporarily unavailable. The action should be tried again later. In the case of an upload or remove operation, the queue transaction will be rolled back so that the MSMQ will handle retrying.
PatientUnderAge	The document was not uploaded because the patient was under the configured minimum age at the time of admission. This is a patient safety initiative.

Value	Description
CouldNotFindQueueItem	This queue item could not be found - it may have been removed from the list or the ID is invalid

IncorrectStatePatientId	The state patient id is incorrect
IncorrectMrn	The supplied MRN is incorrect
UnresolvedHpiiAlert	The HPI-I for this health provider has an unresolved alert. This health provider cannot be used to access the PCEHR until the alert has been resolved.
HpiiWarningRaised	The HPI-I for this health provider has a warning raised against it. This health provider can be used to access the PCEHR but the warning must be logged for this HPI_I.

This code, qualified by the hospital code system, is used to determine: a) Which hospital allocated the MRN, if the Mrn subclass is used. b) Which hospital the episode occurred in, for consent, upload and remove calls. c) Which authorised employee is identified, if the user.Role is AuthorisedEmployee. d) Which health provider organisation (HPI-O) is making the calls to HI Service and PCEHR B2B Gateway.
HospitalCodeSystem	string	0..1	Gets or sets the hospital code system. This is necessary because different systems may use different codes to identify the same hospital. For example, "NOA" or "NHS" for Noarlunga Health Service, where "NOA" is the LAB Facility Code and "NHS" is the PAS Facility Code.
DateOfBirth	dateTime	0..1	The date of birth that was used to obtain or validate the IHI with the HI Service.

Ihi	string	0..1	The value of the IHI.
IhiLastValidated	dateTime	0..1	The date and time when the IHI was last validated with the HI Service. If this value is within the configured period then eHISC will not attempt to revalidate the IHI before use in a PCEHR service call.
IhiRecordStatus	IhiRecordStatus	0..1	The IHI record status Note: In this release eHISC only supports Verified IHIs. It is an error to provide an IHI with any record status apart from Verified.
IhiStatus	IhiStatus	0..1	The IHI status.

Value	Description
Active	The IHI status is Active.
Deceased	The IHI status is Deceased.
Retired	The IHI status is Retired.
Expired	The IHI status is Expired.

Unknown	The IHI status is unknown or not applicable (including when no IHI was found).
DuplicateIhi	The patient has an unresolved alert because another patient record in the same hospital had the same IHI number.
DuplicatePatient	The patient has an unresolved alert because another patient record in the same hospital had demographic information identical to that used to obtain the IHI for this patient.
MergeConflict	The patient has an unresolved alert because it was merged with another patient record that had a different IHI number.
ServiceUnavailable	The IHI or PCEHR lookup failed and will be retried by the background IHI cleanup service.
MedicareDvaChangeMismatch	The patient has an unresolved alert because the Medicare or DVA number was changed, resulting in an IHI search that returned no IHI or returned a different IHI to that which was assigned to the patient.

Simple Type: IhiStatus**Description**

DuplicateIhi	Represents an unresolved alert due to obtaining an IHI when the same IHI is assigned to another patient record from the same hospital. The administrator must determine whether the two records represent the same person, if so then merge the two records, if not then report a potential replica to Medicare Australia.
DuplicatePatient	Represents an unresolved alert due to obtaining an IHI using the same demographic details that are assigned to another patient record from the same hospital. The administrator must determine whether the two records represent the same person, if so then merge the two records, if not then report a potential replica to Medicare Australia.
MergeConflict	Represents an unresolved alert due to merging two patient records that have different IHI numbers. The administrator must choose the correct IHI to resolve this alert.

MedicareDvaChangeMismatch	Represents an unresolved alert due to changing the Medicare card number or DVA file number of the patient, if the patient already had an IHI assigned, and a search using the new Medicare or DVA number found no IHI or found a different IHI to the one that was assigned to the patient.
DemographicMismatch	Represents an unresolved alert due to changing the date of birth of the patient, if the patient already had an IHI assigned, and a search using the current IHI with the new date of birth found no IHI.

Simple Type: QueueOperation

Description

This is used to match the QueueOperation table to code.

Derived By

Restricting string

Enumeration

Value	Description
UploadOrSupersede	The queued operation is to upload a document to a PCEHR, possibly superseding an older version of the same document.
Remove	The queued operation is to remove a document from a PCEHR.

Simple Type: QueueStatus

Description

This is used to match the QueueStatus table to code.

Derived By

Restricting string

Enumeration

Value	Description
Pending	The queued operation is currently in progress or waiting to be processed.
Success	The queued operation was successful. This status is not typically found because the default behaviour is to remove queued items after successful processing.
Failure	The queued operation was not successful. The system administrator should review and correct the reason for failure and resubmit the request.

Simple Type: RemovalReason

Description

This enum is used to match the removal reason id in the RemovalReason table to code. The values of the IDs should also be kept in sync with the NEHTA enum `Nehta.VendorLibrary.PCEHR.RemoveDocument.removeDocumentReasonForRemoval`. Note: The NEHTA enum has an extra item "ElectToRemove", which is omitted from this enum because that is defined for consumer use only.

Derived By

Restricting string

Enumeration

Value	Description
Withdrawn	The provider organisation withdraws the document from the PCEHR. Withdrawn documents will be reinstated if a new version of the document is uploaded.
IncorrectIdentity	The document is removed because it relates to the wrong consumer. Documents removed with this reason cannot be reinstated by the provider or the consumer.

Simple Type: ResponseStatus**Description**

Represents the outcome of a service operation.

Derived By

Restricting string

Enumeration

Value	Description
None	No status has been defined.
OK	The service operation was successful.
Warning	The service operation may have been successful, with associated warning messages.

Simple Type: Sex**Description**

Represents the sex of a person. The valid codes are defined by AS 5017-2006 in table "Health Care Client Identifier Sex".

Derived By

Restricting string

Enumeration

Value	Description
None	No value has been supplied. Where a value for Sex is required, this represents an invalid invocation of the web service. If the IHI search was successful with the Sex not stated, send the value "NotStatedOrInadequatelyDescribed".
Male	Represents male. Mapped to CDA code "M".
Female	Represents female. Mapped to CDA code "F".
IntersexOrIndeterminate	Represents intersex or indeterminate. Mapped to CDA code "I".

Represents the status of this version of the document as communicated by the source system. The valid codes are defined by NCTIS titled "Admin Codes - Document Status".

Derived By

Restricting string

Enumeration

Value	Description
None	No value has been supplied. This represents an invalid invocation of the web service.

Final	Represents a final version of the document. This may be the first final version or an amendment.
Withdrawn	Represents a notification that the document has been withdrawn by the authoring organisation. Withdrawn versions are intended for delivery to point-to-point (P2P) recipients of the document and are not normally uploaded to the PCEHR system. Instead the document can be removed from the PCEHR system with a separate web service invocation.
