

# SNOMED CT-AU – Common v1.1

## Release Note

31 May 2014

Approved for external information

### Summary

#### **EP- 1683:2014 SNOMED CT-AU – Common v1.1**

This end product contains product components that are relevant across SNOMED CT-AU releases.

#### **Release rationale**

This release includes:

- The *NCTIS Reference Set Library v20140531*, which lists all available reference sets produced by the NCTIS, as well as reference sets provided by license holders or other relevant bodies that may be useful for implementation and use in Australia.
- The *SNOMED CT-AU Development Approach For Reference Sets v20140531*, which describes the development approach used in creating reference sets for use by the SNOMED CT-AU community of practice. The reference sets have been developed by the National Clinical Terminology and Information Service (NCTIS) within NEHTA.
- The *SNOMED CT-AU Australian Implementation Guidance v20140531*, intended for software developers, technical consumers and the general SNOMED CT-AU community of practice. It seeks to provide practical guidance for Australian implementations and is used in conjunction with the [IHTSDO Technical Implementation Guide](#).
- The *SNOMED CT-AU - Mapping Guidelines and Requirements v1.0*, which describes a mapping methodology that should be followed when mapping local and proprietary coding systems to SNOMED CT-AU. The audience of this document is expected to have an understanding of both SNOMED CT-AU and the theories and practices of mapping.
- The *SNOMED CT-AU - Reference Set Implementation Toolkit v1.0*, which provides a short introduction or 'quick start' reference for developers wishing to work with SNOMED CT-AU Reference Sets (Refsets). It includes sample applications built on Oracle's Java platform and the Microsoft .NET Framework that demonstrate the importing and use of reference sets.

Please note that this release contains documents that follow different versioning patterns. Documents from the SNOMED CT-AU release that are made available outside of the release are still required to comply with the release versioning pattern.

The release documents were previously provided as part of the SNOMED CT-AU Release end product. They have been moved into the SNOMED CT-AU – Common end product to allow users who are not primary license holders to access them. Other relevant resources will also be published this way in the future.

## Package inclusions

### New

Identifier	Name
NEHTA-1632:2014	<i>SNOMED CT-AU – Common Release Note v1.1 (this document)</i>
NEHTA-1670:2014	<i>NCTIS Reference Set Library v20140531</i>
