Australian Medicines Terminology v3 – Common v1.2
Release Note

22 July 2014
Approved for external information

Summary

EP-1729:2014 Australian Medicines Terminology v3 – Common v1.2

This end product contains product components that are common to the Australian Medicines Terminology (AMT) v3 model.

Release rationale

This release updates the format of the *Australian Medicines Terminology Development Approach for Reference Sets* from a monthly release document to a document published separately from the AMT v3 release files. This version features a number of editorial changes, but only minor changes to content. Further updates to this document will be provided if and when additional reference sets are released and/or modifications to the existing development approach content occur.

The *Australian Medicines Terminology Development Approach for Reference Sets* describes the development approach used by the NCTIS in creating reference sets for use by the AMT community of practice. The reference sets have been developed by the National Clinical Terminology and Information Service (NCTIS) within NEHTA.

Please note that the version of this document included in the 20140360 AMT release is effectively v1.0, so the version included in this release is incremented to v1.1.

This material includes SNOMED Clinical Terms® (SNOMED CT®) which is used by permission of the International Health Terminology Standards Development Organisation (IHTSDO®).

Future releases

Updates to the *Australian Medicines Terminology v3 Model - Technical Implementation Guide* and *Australian Medicines Terminology v3 Model - Technical Implementation Guide Scripts* are scheduled to be released in August 2014.

Previous releases

Date	Version
08 July 2014	EP-1719:2014 Australian Medicines Terminology v3 – Common v1.1
	Release rationale:
	This release updates the *Australian Medicines Terminology v3 Model - Editorial Rules* (hereafter: AMT v3 ER) from v1.0 to v2.0. The AMT v3 ER focuses on the naming conventions and rules associated with all description types for concepts in the AMT v3 model, and provides a practical understanding of the rules applied in the creation of the AMT v3 descriptions. The modifications in this update have been undertaken to:
	• ensure compliance with the AMT v3 model; and to
	• incorporate changes as a result of stakeholder and NEHTA feedback.
