### Product or document version history

Product or document version	Date	Release comments
1.0	20 Dec 2011	Draft for limited release
1.1	18 Jan 2012	Update to reflect Tiger Team feedback
1.2	18 April 2012	<p>Added conformance points 31 to 40.</p> <p>Added Transmission Timestamp and Signature. Table 14 is now Timestamp Header. Table 15 is now Transmission Signature in SOAP Header</p> <p>Changed all XSD and WSDL files to latest version as of 11 April 2012.</p> <p>Added reference for ATS 5821</p> <p>Added reference W3C-XML-1.1</p> <p>PCEHR Header changed from section 4.1.1.3 to 4.1.1.5</p> <p>Updates related to document exchange:</p> <ul style="list-style-type: none"> <li>Section 3.2.5, Table 5 replaced with new Document Metadata to XDS.b Document Entry mapping</li> <li>Table 9 replaced with new Document Metadata to XDS.b Document Entry mapping</li> <li>VIEW-T 8 Changed documentid from document unique identifier to entryUUID.</li> </ul>
1.3	30 May 2012	<p>Added getRepresentativeListView operation</p> <p>Added conformance points 41 to 43</p>
1.4	6 Sept 2012	<p>Added getIndividualDetailsView operation.</p> <p>Updated schemas and WSDLs</p>
1.5	5 April 2013	See details in <i>PCEHR B2B Gateway Service Release Note v1.4</i>

Product or document version	Date	Release comments
1.6	13 November 2014	<p>Update for PCEHR Release 5 to include Pathology, Diagnostic Imaging, Advance Care and Health Record Overview capabilities.</p> <p>Update to Health Record Overview section in both the getView and the Appendix section of the document.</p>
1.6.1	31 December 2014	Minor editorial changes.
1.7	22 July 2015	Updated to reflect new version of Health Record Overview.
1.8	23 September 2019	Refer to <i>My Health Record B2B Gateway Services - Release Note v1.8</i> for details.
1.9	22 January 2020	<p>Revert the section 4.2.7 'Health Record Overview' back to as documented in version 1.7 of this document. Remove the entire section 4.2.8 'Advance Care View'. HRO V1.2 and the 'Advance Care View' are only intended for use by the My Health Record's National Provider Portal and not by third-party developers.</p> <p>Add a new 'OtherLink' link named 'AdvanceCareInformationList' to the reverted section 4.2.7 'Health Record Overview' as part of the 'Goals of Care' work package.</p>

# 1 Introduction

## 1.1 Purpose

This document provides an implementable technical interface specification for the My Health Record View Service.

This document must be read in conjunction with the *My Health Record View Service Logical Service Specification* [PCEHR-VS-LSS] and the *My Health Record Document Exchange Technical Service Specification* [PCEHR-DE-TSS].

## 1.2 Intended audience

This document is intended for use by implementers of systems interfacing with the My Health Record System, formally known as the Personally Controlled Health Record System (PCEHR), such as clinical information systems (CIS) and conformant portals.

This includes:

- Developers and implementers of software products which seek to interact with the My Health Record System (normative)
- Jurisdictional digital health programs (informative)
- The Australian Health Informatics Standards development community (informative).

This is a technical document which makes use of the UML 2.3 standard [UML2010].

This document assumes that the reader is familiar with:

- UML and service-oriented architecture concepts and patterns
- RM-ODP (Reference Model of Open Distributed Processing) reference model [RM-ODP]
- XDS.b (Cross-Enterprise Document Sharing-b) [XDS.b]
- *PCEHR View Service - Logical Service Specification* [PCEHR-VS-LSS]
- *ATS 5820-2010 E-health Web Services Profile* [ATS 5820-2010]
- *ATS 5821-2010 E-health XML Secured Payload Profiles* [ATS 5821-2010].

## 1.3 Context

The *PCEHR View Service - Logical Service Specification* [PCEHR-VS-LSS] presents a platform-independent specification of the My Health Record System View Service. This technical service specification presents an implementable interface that is supported by the My Health Record System and can be used by systems integrating to the My Health Record System.

Figure 1 shows how the set of operations addressed within this specification fit into the broader set of My Health Record System functionality.

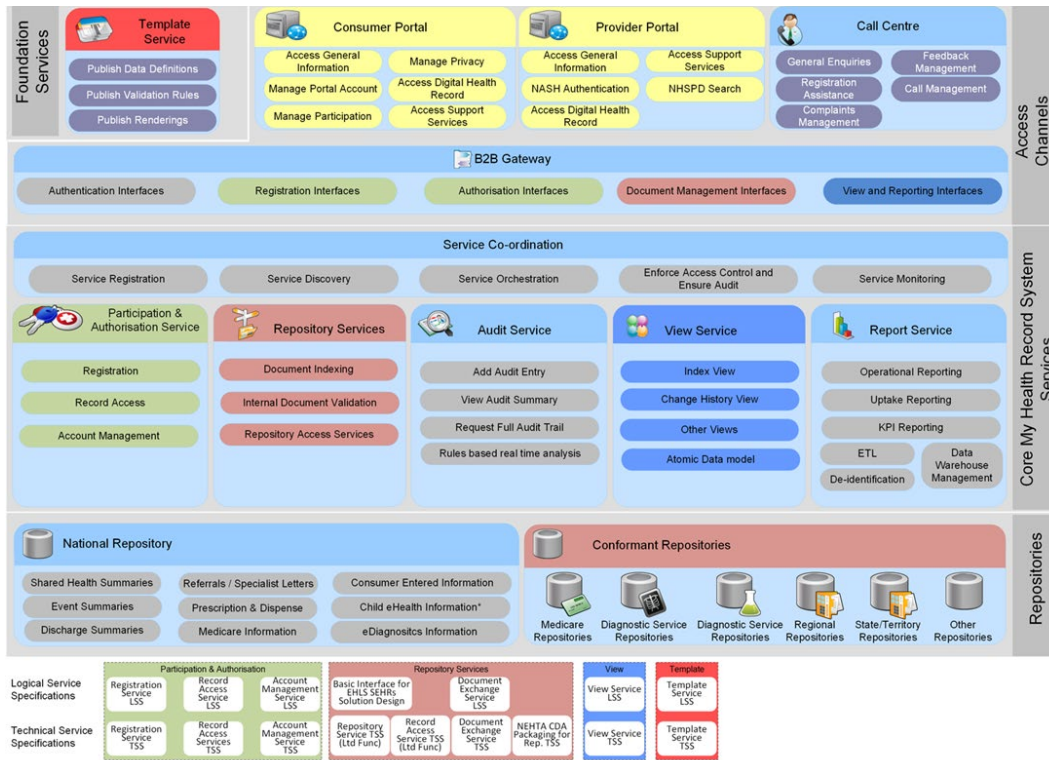

Figure 1 - My Health Record System functions addressed

## 1.4 Scope

This technical service specification binds the services, services interfaces and operations defined in the logical service specification onto a technology platform to a level of detail sufficient to support the implementation of external interfacing systems.

### 1.4.1 In scope

The scope of this specification is to provide implementation level detail of the interfaces that external systems will use to interact with the My Health Record View Service.

The main scope of this specification can be summarised as:

- interface technical details (e.g. communication protocol, encoding)
- request and response message layouts
- message interactions
- error messages expected
- message transmission security
- operational details.

### 1.4.2 Out of scope

This document does not cover any user interaction via an integrated system or specify any user interface. This document deals solely with machine-level interactions.

## 1.5 Conformance points

This specification contains conformance points that identify normative requirements that are to be met by identified members of the View Service interface user system roles (as described in the logical service specification) in order to comply with this specification when interacting with the View Service interface.

Conformance points include requirements on a party (Service Invoker) invoking the service and the party (Service Provider) providing the service.

Any capability required to meet a conformance point **SHALL** be considered part of the requirements to be met under this specification.

Conformance points are identified within this document by the means of the following notation:

---

<b>VIEW-T 0</b>	This is an example only. Conformance points <b>SHALL</b> be numbered and contain an identifier of VIEW-T which identifies them as being applicable to the View Service technical service specification.
-----------------	---

---

The keywords **SHALL**, **SHALL NOT**, **SHOULD** and **SHOULD NOT** in this document are to be interpreted as described in IETF's RFC 2119 [RFC2119].

Note that the conformance point numbering is non-consecutive in some sections; however, numbers remain uniquely assigned to each conformance points.

## 1.6 Document map

Figure 2 shows how this document and other My Health Record System artefacts are grouped according to the eHealth Interoperability Framework layers of abstraction and viewpoints.

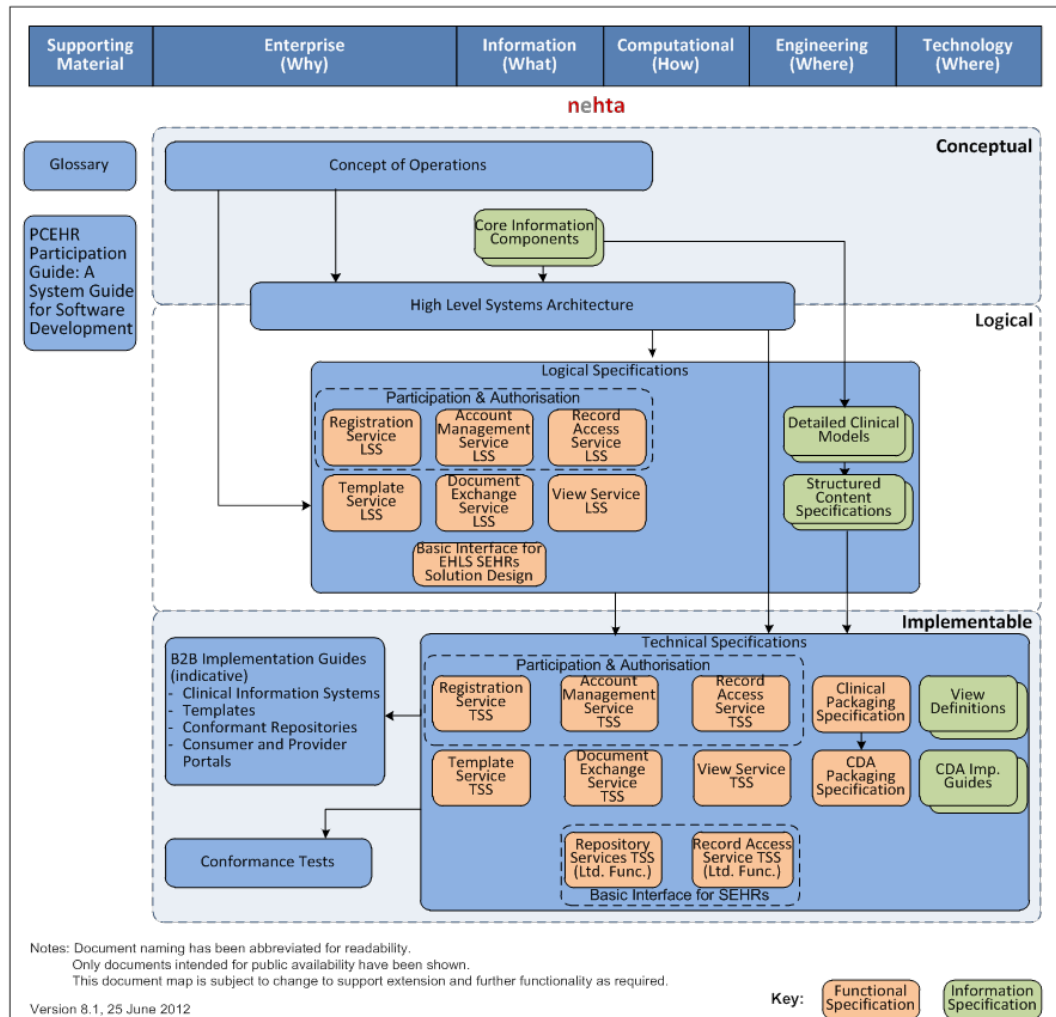

Figure 2 - Document map

## 1.7 Usages

This document uses the following conventions to denote special terms.

Convention	Meaning
<i>Italicised Initial Capitals</i>	System role
<code>courier new typeface</code>	Parameter

## 2 Standards and technology platform

A standards and technology platform is a collection of standards and technologies that may be used collectively to realise an implementation of one or more service interfaces specified within a logical service specification.

A single service interface within a logical specification must be realised fully by a single technology platform. However, each service interface specified within a logical specification may be realised wholly on different standards and technology platforms.

The technology platform for this specification is comprised of interaction through web service interfaces that conform to the relevant elements of the Australian Technical Specification *E-health Web Services Profile* [ATS 5820-2010] and the IHE *Cross-Enterprise Document Sharing Implementation, IHE XDS.b Cross Document Exchange* for related operations. The technical specification for document exchange using XDS.b interface is defined in the *My Health Record System Document Exchange Technical Service Specification* [PCEHR-DE-TSS].

This specification depends on the following infrastructure services:

- Healthcare Identifiers (HI) Service for identification of healthcare provider organisations (HPI-O), healthcare provider individuals (HPI-I) and the subject of care (an individual identified by an IHI).
- The National Authentication Service for Health (NASH) for the provision of X.509 certificates used for signing and encryption.

### *Conformance points*

The following conformance points define the application of the *E-health Web Services Profile* [ATS 5820-2010] to service interactions:

<b>VIEW-T 1</b>	All implementations <b>SHALL</b> conform to the Web Services Base Profile from ATS 5820-2010 for all web service invocations.
<b>VIEW-T 2</b>	All implementations <b>SHALL</b> implement the TLS Security Profile from ATS 5820 2010 for all web service invocations.

### 3 Computational viewpoint

The computational viewpoint addresses how the service interfaces and service operations defined in the logical service specification map onto the operation and transport specifications provided by the standards and technology platform.

#### 3.1 Security

<b>VIEW-T 3</b>	View Users <b>SHALL</b> use NASH certificates for authentication when implementing TLS Security Profile from ATS 5820-2010.
<b>VIEW-T 31</b>	The <i>Service Invoker</i> and <i>Service Provider</i> <b>SHALL</b> include a Transmission Signature (section 4.1.1.4) containing a signed attestation of elements contained within the SOAP message on all SOAP Request and Response messages, except where the response contains a SOAP Fault.
<b>VIEW-T 32</b>	The <i>Service Invoker</i> and <i>Service Provider</i> <b>SHALL</b> create the signature using a certificate that asserts the same identity as that asserted in the TLS connection.
<b>VIEW-T 33</b>	The <i>Service Provider</i> <b>SHOULD</b> respond to an invalid Transmission Signature by rejecting the entire message and responding with an error defined in ATS 5820 2010.

#### 3.2 Service interface realisation

This section shows the service interfaces defined in the *PCEHR View Service - Logical Service Specification* [PCEHR-VS-LSS] and specifies how these are realised on the chosen technology platform.

Table 1 below shows how the logical operations are realised in this technical service specification.

*Table 1 - Logical to technical service specification mapping table*

Logical Service Specification (LSS)	Technical Service Specification (TSS)
getView	getView
getChangeHistoryView	getChangeHistoryView
getAuditView	getAuditView
getDocumentList	registryStoredQuery (ITI-18)
getRepresentativeList	getRepresentativeList
getIndividualDetailsView	getIndividualDetailsView

### *Conformance points*

---

**VIEW-T 4** All implementations **SHALL** comply with applicable conformance points specified in the *PCEHR View Service - Logical Service Specification* [PCEHR-VS-LSS]

---

### **3.2.1 getView**

This operation returns the requested My Health Record System view to the healthcare provider.

#### **3.2.1.1 Actors and roles**

##### ***Role 1: getView Service Invoker***

The *getView Service Invoker* represents the party responsible for obtaining views from the My Health Record System. This role will typically be realised by a conformant portal, a clinical information system or a contracted service provider.

##### ***Role 2: getView Service Provider***

The *getView Service Provider* role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by authorised *Service Invoker*. This role will be fulfilled by the national My Health Record System.

#### **3.2.1.2 Pre-condition**

### *Conformance points*

---

**VIEW-T 5** The *Service Invoker* **SHALL** set the digital health record individual IHI to the *ihiNumber* in the PCEHR Header.

---

#### **3.2.1.3 Post-conditions**

### *Conformance points*

---

**VIEW-T 6** The *Service Provider* **SHALL** return a response containing the digital health record assembled view based on the access level of the healthcare provider organisation for the provided IHI.

---

#### **3.2.1.4 Interaction**

### *Conformance points*

---

**VIEW-T 7** This operation **SHALL** be realised as a synchronous call between the *Service Invoker* and the *Service Provider*.

---

#### **3.2.1.5 Inputs, outputs and faults**

This section details the data which is submitted to the service as an input, the response returned and the details of any faults. The data types are realised as XML Schema Definitions (XSD) (referenced in Appendix A).

The service interfaces will use the WSDLs referenced in Appendix A.

**Input message**

*Table 2 - getView Input Message*

Element Name	Type	Cardinality	Remarks
<b>GetView</b>		<b>1..1</b>	The schema elements are used to automatically determine what view it is
view	xs:any	1..1	Refer to individual view parameters below for each type of view

**/GetView**

The schema elements are used to automatically determine which view is being requested by the Service Invoker. The XSD has a strongly typed schema. This includes all of the views under a single choice element. When parsing the XML data against this, it will automatically determine which view it is.

For details on the different views' input parameters, please refer to section 4.2.

**Output message**

*Table 3 - getView output message*

Element Name	Type	Cardinality	Remarks
<b>GetViewResponse</b>		<b>1..1</b>	
<b>ResponseStatus</b>		<b>1..1</b>	
code	String	1..1	Status Code for the result of the transaction
description	String	1..1	Brief status description
details	String	0..1	Additional detail of the response

**/ResponseStatus**

<b>View</b>		<b>0..1</b>	
templateID	String	1..1	Template identifier for template used to display the CDA view
data	xs:Any (Base64Binary custom XML or ZIP)	1..1	Use MTOM/XOP to optimise transmission. For a details on the different views <data> returned, see section 4.2.

**/View**

**/GetViewResponse**

For details on the different view <data> returned please refer to section 4.2. The view data in the output message will depend on the getView input message <view> parameters.

*Informative note*

With the exception of naming conventions and explicit support for MTOM-XOP, this technical service specification is closely aligned with the specification provided within ATS 5820-2010 *E-health Web Services Profiles*.

The Message Transmission Optimization Mechanism (MTOM) is used to separate out binary data, which is otherwise base64-encoded, and send it in separate binary attachments using a MIME Multipart/Related message.

Sending the data in binary format significantly reduces its size, thus optimising the transmission of the SOAP message.

XOP processing is used to serialise it into a MIME Multipart/Related message. The XOP processing extracts the base64Binary data from the SOAP message and packages it as separate binary attachments.

**Service fault**

Please refer to the error codes in section 4.1.2.2.

**3.2.2 getChangeHistoryView**

This operation returns the list of document metadata that has been registered to the My Health Record System for a specific document.

XDS.b AdhocQueryResponse object is used to represent the list of document metadata.

**3.2.2.1 Actors and roles**

**Role 1: getChangeHistoryView Service Invoker**

The *getChangeHistoryView Service Invoker* role represents the party responsible for obtaining views from the My Health Record System. This role will typically be realised by a conformant portal, a clinical information system or a contracted service provider.

**Role 2: getChangeHistoryView Service Provider**

The *getChangeHistoryView Service Provider* role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by authorised users. This role will be fulfilled by the national My Health Record System.

**3.2.2.2 Pre-condition**

*Conformance points*

---

<b>VIEW-T 8</b>	The <i>Service Invoker</i> <b>SHALL</b> set the documentId to the document unique identifier for which the document change history information is being requested.
-----------------	--

---

**3.2.2.3 Post-conditions**

*Conformance points*

---

<b>VIEW-T 9</b>	The <i>Service Provider</i> <b>SHALL</b> return sets of document change history information for the specified document.
<b>VIEW-T 10</b>	The <i>Service Provider</i> <b>SHALL NOT</b> return sets of document change history information when the healthcare provider organisation does not have access to the specified document.

---

### 3.2.2.4 Interaction

#### Conformance points

<b>VIEW-T 11</b>	This operation <b>SHALL</b> be realised as a synchronous query between the <i>Service Invoker</i> and the <i>Service Provider</i> . The response <b>SHALL</b> be returned on the same software communication connection.
------------------	--

### 3.2.2.5 Inputs, outputs and faults

This section details the data which is submitted to the service as an input, the response returned and the details of any faults. The data types are realised as XSDs (reference in Appendix A).

The WSDLs and service interfaces for this service are referenced in Appendix A.

#### Input message

Table 4 - *getChangeHistoryView* Input Message

Element Name	Type	Cardinality	Remarks
<b>getChangeHistoryView</b>		<b>1..1</b>	
documentID	String	1..1	The identifier for a document
<b>/getChangeHistoryView</b>			

#### Output message

This operation returns IHE XDS.b AdhocQueryResponse, which contains a list of document metadata from the document registry.

Please refer to query.xsd for AdhocQueryResponse. The query.xsd is in the XDS.b supporting material [XDS.b SM] (/schema/ebRS).

Table 5 is the mapping table for the DocumentMetadata realisation to the XDS.b document registry.

Table 5 - Logical Document Metadata Mapping Table

LSS field	Description	XDS.b field name
Authoring Organisation	The identifier of the organisation that authored the document.	XSDDocumentEntry. authorInstitution
Authoring Individual	The identifier of the individual that authored the document.	XSDDocumentEntry. authorPerson
Document Type Code	A code relating to the type of document being retrieved.	XSDDocumentEntry. classCode
Document Type Display Name	A display friendly name for the document type.	XSDDocumentEntry. classCodeDisplayName

<b>LSS field</b>	<b>Description</b>	<b>XDS.b field name</b>
PCEHR Template Identifier	The identifier of the template this document conforms to.	XDSDocumentEntry. formatCode
Document ID	A unique object identifier relating to the document. This must be unique within the My Health Record System and must be equivalent to the identifier of the root CDA Document within the CDA Package.	XDSDocumentEntry. uniqueId
Title	An optional title for the given document.	XDSDocumentEntry. title
Document Creation Time	The time the document was created.	XDSDocumentEntry. creationTime
Service Start Time	The datetime the service being performed, which caused the document to be created, started.	XDSDocumentEntry. serviceStartTime
Service Stop Time	The datetime the service being performed, which caused the document to be created, stopped.  The Service Stop Time may be set to the same value as the Service Start Time in order to indicate the datetime of an event.	Service Stop Time serviceStopTime
Document Hash	A SHA-1 hash representation of the document.	XDSDocumentEntry.hash
Keyword	One or more keywords that are related to the document submission.  Both these fields must be excluded from submission.	XDSDocumentEntry. eventCodeList  XDSDocumentEntry. eventCodeListDisplayName
Healthcare Facility Type Code	A code identifying the type of healthcare facility where the event relating to this document submission request initiated.	XDSDocumentEntry. healthcareFacilityTypeCode
Healthcare Facility Type Name	A display friendly name for the above code.	XDSDocumentEntry. healthcareFacilityTypeCodeDisplayName.
Clinical Speciality Code	A code identifying the clinical specialty where the event relating to this document submission request initiated.	XDSDocumentEntry. practiceSettingCode

LSS field	Description	XDS.b field name
Clinical Specialty Display Name	A display friendly name for the above specialty.	XSDSDocumentEntry. practiceSettingCodeDisplayName
N/A	This field is not present in the LSS definition of the Document Metadata as it is in the Common Header.  The value from the common header should be replicated into this field.	XSDSDocumentEntry. sourcePatientId
N/A	This mandatory XDS.b field is not supported by My Health Record System.  It shall be set to a value of 'NA'.	XSDSDocumentEntry. confidentialityCode
N/A	This field is not required by the logical model presented within the LSS but is a mandatory field within XDS.  This field shall be set to the same value as that provided in the classCode field.	XSDSDocumentEntry. typeCode
N/A	This field is not required by the logical model presented within the LSS but is a mandatory field within XDS.  This field shall be set to the same value as that provided in the classCodeDisplayName field.	XSDSDocumentEntry. typeCodeDisplayName
Common Header. IHI Number	This value <b>SHALL</b> be set to the same value as the XSDSDocumentEntry.sourcePatientId.	XSDSDocumentEntry. patientId
N/A	This field is not required by the logical model presented within the LSS but is a mandatory field within XDS.  Set to a fixed value of 'en-AU'.	XSDSDocumentEntry. languageCode
N/A	The MIME type of the document provided.  This field is set to a fixed value of 'application/zip'.	XSDSDocumentEntry. mimeType

LSS field	Description	XDS.b field name
N/A	This will be the entryUUID allocated to the XDS Document Entry object within the digital health record registry.	XSDSDocumentEntry. entryUUID
N/A	The size of the CDA document. This field is mandatory for ITI-42 document registrations.	XSDSDocumentEntry. size

### **Service fault**

Please refer to section 4.2.6 of the *My Health Record System Document Exchange Technical Service Specification* [PCEHR-DE-TSS] for the XDS Service Faults.

### **3.2.3 getAuditView**

This operation returns an audit trail from the My Health Record System for organisations and individuals. The organisation may be either a healthcare provider or, in an exceptional case, a non-healthcare provider. Healthcare providers obtain their identification (HPI-O) from the HI Service to access and view audit trails. However, organisations that are not healthcare providers receive a special identifier from the My Health Record System operator to access and view audit trails. Individuals, on the other hand, obtain their identification number IHI from the HI Service to access and view audit trails of their own digital health record.

The getAuditView operation returns information based on the type of identifier supplied, as follows:

- If the getAuditView service receives a request from a healthcare provider organisation with an HPI-O, then the getAuditView returns the audit events of the provider across multiple digital health records.
- If the getAuditView service receives a request for a non-healthcare organisation with a specially issued identifier from the My Health Record System operator, then the getAuditView returns the audit events of the non-healthcare provider across multiple digital health records.
- If the getAuditView service receives a request from an individual with an IHI, then only the audit events for the digital health records that the individual owns will be returned.

The audit view data presented to the requestor will contain data appropriate for the requestor's access rights and role in the system.

Organisation requestors are able to access only a subset (a limited section) of audit events, while consumers (the owners of digital health records) can access all their audit events.

#### **3.2.3.1 Actors and roles**

##### **Role 1: getAuditView Service Invoker**

The *getAuditView Service Invoker* role represents the party responsible for obtaining views from the My Health Record System. This role will typically be realised by a conformant portal, a clinical information system or a contracted service provider acting on behalf of one of those system types.

**Role 2: getAuditView Service Provider**

The *getAuditView Service Provider* role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by authorised users. This role will be fulfilled by the national My Health Record System.

**3.2.3.2 Pre-condition**

Conformance points

---

<b>VIEW-T 12</b>	The <i>Service Invoker</i> <b>SHALL</b> set the Date To and Date From.
------------------	--

---

**3.2.3.3 Post-conditions**

*Conformance points*

---

<b>VIEW-T 13</b>	The <i>Service Provider</i> <b>SHALL</b> return an audit trail applicable to the My Health Record System role within the specified period of time defined in the input message.
------------------	---

---

**3.2.3.4 Interaction**

*Conformance points*

---

<b>VIEW-T 14</b>	This operation <b>SHALL</b> be realised as a synchronous query between the <i>Service Invoker</i> and the <i>Service Provider</i> . The response <b>SHALL</b> be returned on the same software communication connection.
------------------	--

---

**3.2.3.5 Inputs, outputs and faults**

This section details the data which is submitted to the service as an input, the response returned and the details of any faults. The data types are realised as XSDs as referenced in Appendix A.

The WSDLs and service interfaces for this service are also referenced in Appendix A.

***Input message***

*Table 6 - getAuditView Input Message*

**Service fault**

Please refer to the error codes in section 4.1.2.2.

**3.2.4 registryStoredQuery**

The getDocumentList operation is realised using registryStoredQuery operation defined in the *My Health Record Document Exchange Service Technical Service Specification v1.6* section 3.3.3.

This operation returns a list of XDS.b XDSDocumentEntry objects that can be realised to derive document list within the client system.

**3.2.4.1 Actors and roles**

**Role 1: registryStoredQuery Service Invoker**

The *registryStoredQuery Service Invoker* role represents the party responsible for obtaining views from the My Health Record System. This role will typically be realised by a conformant portal, a clinical information system or a contracted service provider acting on behalf of one of those system types.

**Role 2: registryStoredQuery Service Provider**

The *registryStoredQuery Service Provider* role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by authorised users. This role will be fulfilled by the national My Health Record System.

### 3.2.4.2 Pre-conditions

#### Conformance points

---

<b>VIEW-T 15</b>	The <i>Service Invoker</i> <b>SHALL</b> comply with all the pre-condition conformance points defined in the <i>My Health Record System Document Exchange Technical Service Specification</i> , section 3.3.3 ITI-18 Registry Stored Query.
------------------	--

---

### 3.2.4.3 Post-conditions

#### Conformance points

---

<b>VIEW-T 16</b>	The <i>Service Invoker</i> <b>SHALL</b> comply with all the post-condition conformance points defined in the <i>My Health Record System Document Exchange Technical Service Specification</i> , section 3.3.3 ITI-18 Registry Stored Query.
------------------	---

---

### 3.2.4.4 Interaction

#### Conformance points

---

<b>VIEW-T 17</b>	The <i>Service Invoker</i> <b>SHALL</b> comply with all the interaction conformance points defined in the <i>My Health Record System Document Exchange Technical Service Specification</i> , section 3.3.3 ITI-18 Registry Stored Query.
------------------	--

---

### 3.2.4.5 Inputs, outputs and faults

All inputs, outputs and faults data types are defined in the *My Health Record System Document Exchange Technical Service Specification*, section 3.3.3.

#### Input message

Please refer to query.xsd in Appendix A for AdhocQueryRequest.

---

<b>VIEW-T 18</b>	The <i>Service Invoker</i> <b>SHALL</b> comply with the query id defined in <i>My Health Record System Document Exchange Technical Service Specification</i> , section 3.3.3 ITI-18 Registry Stored Query.
------------------	--

---

<b>VIEW-T 19</b>	The <i>Service Invoker</i> <b>SHALL</b> comply with the query parameter defined in <i>My Health Record System Document Exchange Technical Service Specification</i> , section 3.3.3 ITI-18 Registry Stored Query.
------------------	---

---

#### Output message

Please refer to query.xsd or AdhocQueryResponse. The query.xsd is in the XDS.b supporting material [XDS.b SM] (/schema/ebRS) and the *My Health Record System Document Exchange Technical Service Specification*.

#### Service fault

Please refer to the *My Health Record System Document Exchange Technical Service Specification*.

### 3.2.5 getRepresentativeList

This operation returns the list of representatives associated with a particular individual's digital health record.

#### 3.2.5.1 Actors and roles

##### **Role 1: getRepresentativeListView Service Invoker**

The *getRepresentativeListView Service Invoker* role represents the party responsible for obtaining views from the My Health Record System. This role will be typically realised by a conformant portal, a clinical information system or a contracted service provider.

##### **Role 2: getRepresentativeList Service Provider**

The *getRepresentativeList Service Provider* role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by the authorised *Service Invoker*.

#### 3.2.5.2 Pre-condition

##### *Conformance points*

---

**VIEW-T 41** The *Service Invoker* **SHALL** set the digital health record individual IHI to the *ihiNumber* in the PCEHR Header.

---

#### 3.2.5.3 Post-conditions

##### *Conformance points*

---

**VIEW-T 42** The *Service Provider* **SHALL NOT** return the list of Nominated Representatives when the request is from a healthcare provider organisation or individual.

---

#### 3.2.5.4 Interaction

##### *Conformance points*

---

**VIEW-T 43** This operation **SHALL** be realised as a synchronous call between the *Service Invoker* and the *Service Provider*. The response **SHALL** be returned on the same software communication connection.

---

#### 3.2.5.5 Inputs, outputs and faults

This section details the data which is submitted to the service as an input, the response returned and the details of any faults. The data types are realised as XML Schema Definitions (XSD) (referenced in Appendix A).

The WSDLs and service interfaces for this service are also referenced in Appendix A.

<b>/address</b>			
<b>/representative</b>			
<b>/representativeList</b>			
<b>/PCEHRRRecord</b>			
<b>/getRepresentativeListResponse</b>			

**Note:** The address is optional—it will not be populated. It is provided for future use.

**Service fault**

Please refer to the error codes in section 4.1.2.2.

**3.2.6 getIndividualDetailsView**

This operation `getIndividualDetailsView` returns the details about the individual consumer, including information such as name, date of birth, age, emergency contact and carer information. It does not return the individual consumer’s mailing address when a provider requests to view an individual’s details.

**3.2.6.1 Actors and roles**

**Role 1: `getIndividualDetailsView Service Invoker`**

The `getIndividualDetailsView Service Invoker` role represents the party responsible for obtaining views from the My Health Record System. This role will be typically realised by a conformant portal, a clinical information system or a contracted service provider.

**Role 2: *getIndividualDetailsView* Service Provider**

The *getIndividualDetailsView* Service Provider role represents the party responsible for supplying views of information relating to digital health record stored information, so that it may be accessed by an authorised Service Invoker.

**3.2.6.2 Pre-condition**

*Conformance points*

---

VIEW-T 44	The <i>Service Invoker</i> <b>SHALL</b> set the digital health record individual IHI to the <i>ihiNumber</i> in the PCEHR Header.
-----------	---

---

**3.2.6.3 Post-conditions**

*Conformance points*

---

VIEW-T 46	The <i>Service Provider</i> <b>SHALL NOT</b> return the mailing address of the individual consumer when the request is from a healthcare provider.
-----------	--

---

**3.2.6.4 Interaction**

*Conformance points*

---

VIEW-T 45	This operation <b>SHALL</b> be realised as a synchronous call between the Service Invoker and the Service Provider. The response <b>SHALL</b> be returned on the same software communication connection.
-----------	--

---

**3.2.6.5 Inputs, outputs and faults**

This section details the data that is submitted to the service as an input, the response returned and the details of any faults. The data types are realised as XML Schema Definitions (XSD) (referenced in Appendix A).

The WSDLs and service interfaces for this service are also referenced in Appendix A.

Please refer to the error codes in section 4.1.2.2.

<sup>1</sup> See <http://meteor.aihw.gov.au> from Australian Institute for Health and Welfare.

## 4 Information viewpoint

The information viewpoint addresses common information models that are used in the service operations defined in the computational viewpoint.

### 4.1 Information data type realisation

This section describes the information data type realisation from the logical service specification [PCEHR-VS-LSS] into this technical specification.

#### 4.1.1 Common Header

Common Header is realised into the SOAP Header on web service calls as:

- WS-Addressing Header
- Timestamp
- Signature
- PCEHRHeader

##### 4.1.1.1 WS-Addressing header (Request)

Table 12 - WS-Addressing Header (Request)

Element Name	Type	Cardinality	Remarks
<b>WS-Addressing</b>		<b>1..1</b>	
MessageId	UUID	1..1	Unique id for the message. E.g. uuid:95b48e68-5dfc-4dbd-ab05-aaa855cec03f
To	anyURI	1..1	Value: e.g. <a href="http://www.w3.org/2005/08/addressing/anonymous">http://www.w3.org/2005/08/addressing/anonymous</a>
Action	anyURI	1..1	Identifier (full namespace) of the virtual service being invoked.
<b>/WS-Addressing</b>			

#### Conformance points

<b>VIEW-T 20</b>	The <i>Service Invoker</i> <b>SHALL</b> set these values in accordance with <i>ATS 5820-2010 E-health Web Services Profile</i> , Section 6 - Metadata.
------------------	--

#### 4.1.1.2 WS-Addressing header (Response)

Table 13 - WS-Addressing Header (Response)

Element Name	Type	Cardinality	Remarks
<b>WS-Addressing</b>		<b>1..1</b>	
MessageId	UUID	1..1	Unique id for the message. E.g. uuid:95b48e68-5dfc-4dbd-ab05-aaa855cec03f
RelatesTo	UUID	1..1	MessageId of the original service request.
Action	anyURI	1..1	Identifier (full namespace) of the virtual service being invoked.
<b>/WS-Addressing</b>			

#### Conformance points

<b>VIEW-T 21</b>	The <i>Service Provider</i> <b>SHALL</b> set these values in accordance with ATS 5820-2010, Section 6 - Metadata.
------------------	---

#### 4.1.1.3 Transmission timestamp

Table 14 - Timestamp Header

Element Name	Type	Cardinality	Remarks
<b>timestamp</b>		<b>1..1</b>	
created	dateTime	1..1	Time at SOAP message creation. Inclusive of Date, Time and UTC Timezone. E.g. 2011-10-25T03:06:13Z
expires	dateTime	0..1	For future use.
<b>/timestamp</b>	-	-	-

#### 4.1.1.4 Transmission signature

Table 15 - Transmission Signature in SOAP Header

Element Name	Type	Cardinality	Remarks
signature		1..1	
signature	ds:signature	1..1	A signed attestation of key SOAP message elements using the ATS 5821 specification.
/signature	-	-	-

#### Conformance points

<b>VIEW-T 34</b>	The element signed by the Transmission Signature by all parties <b>SHALL</b> include a SOAP Body Element.
<b>VIEW-T 36</b>	The elements signed by the Transmission Signature by the <i>Service Invoker</i> <b>SHALL</b> also include PCEHR Header element (as defined in section 4.1.1.5).
<b>VIEW-T 38</b>	The elements signed by the Transmission Signature <b>SHOULD</b> include the Transmission Timestamp element (as defined in section 3.1).
<b>VIEW-T 39</b>	The <i>Service Invoker</i> and <i>Service Provider</i> <b>SHALL</b> calculate the ds:DigestValue as specified in “section 4. XML Signature Profile” of ATS 5821-2010 prior to the application of MTOM/XOP.
<b>VIEW-T 40</b>	The ds:SignedInfo element type <b>SHALL</b> be realised in conformance with “section 4. XML Signature Profile” as specified in ATS 5821-2010.
<b>VIEW-T 47</b>	The fragment identifier used within the ds:Reference element, specified in “section 4. XML Signature Profile” of ATS 5821-2010, <b>SHALL</b> refer to the “ID” attribute specified in section 3.3 of W3C-XML-1.1 of the element referenced [W3C-XML].
<b>VIEW-T 48</b>	As specified in ATS 5821-2010, the ds:signature element type <b>SHALL</b> be realised in conformance with section 4. XML Signature Profile”.

#### 4.1.1.5 PCEHRHeader

PCEHRHeader is used for all interactions with the My Health Record System.

Figure 3 - PCEHRHeader

Table 16 - PCEHRHeader

Element Name	Type	Cardinality	Remarks
<b>PCEHRHeader</b>		<b>1..1</b>	
<b>User</b>		<b>1..1</b>	
iDType	IdentifierType	1..1	Values ("HPII", "PortalUserIdentifier", "LocalSystemIdentifier")
ID	String	1..1	Digital health record identity, 16 digit HPI-I number or Other User ID
role	String	0..1	Optional User Role
userName	String	1..1	Username
useRoleForAudit	Boolean	1..1	If true, My Health Record System will use sourceSystemUserRole as the user name for audit, else My Health Record System will use sourceSystemUserName as the user name for audit
<b>/User</b>			
iHINumber	String	0..1	Digital health records individual's 16-digit IHI number
<b>productType</b>		<b>1..1</b>	
vendor	String	1..1	Client system's vendor name
productName	String	1..1	Client system's product name
productVersion	String	1..1	Client system's product version

Element Name	Type	Cardinality	Remarks
platform	String	1..1	Client system's platform
<b>/productType</b>			
clientSystemType	String	1..1	Values ("CCP","CPP", "CIS", "CSP", "CRP", "HI", "Medicare", "Other")
<b>accessingOrganisation</b>		<b>0..1</b>	
organisationID	String	1..1	The 16-digit Healthcare Organisation Identifier (HPI-O) or approved alternative (a unique identifier issued by the My Health Record System Operator e.g. a PAI-O)
organisationName	String	1..1	Organisation Name
alternateOrganisationName	String	0..1	Alternate Organisation Name
<b>/accessingOrganisation</b>			
<b>/PCEHRHeader</b>			

*Conformance points*

<b>VIEW-T 22</b>	The <i>Service Invoker</i> <b>SHALL</b> set the ihiNumber to the IHI of the individual who owns the digital health records.
<b>VIEW-T 23</b>	The <i>Service Invoker</i> <b>SHALL</b> set the accessingOrganisation to the accessing organisation attempting to query the My Health Record System.
<b>VIEW-T 24</b>	The <i>Service Invoker</i> <b>SHALL</b> set the User.ID to either: <ul style="list-style-type: none"> <li>preferably, if known, the 16-digit of HPI-I of the provider attempting to access the My Health Record System;</li> <li>or alternatively, a local identifier of the provider/support operator attempting to access the My Health Record System.</li> </ul>
<b>VIEW-T 25</b>	The <i>Service Invoker</i> <b>SHALL</b> set the User.IDType to the relevant value to identify the type of User.ID.
<b>VIEW-T 26</b>	The <i>Service Invoker</i> <b>SHALL</b> set the productType.vendor to the vendor name of the client system.
<b>VIEW-T 27</b>	The <i>Service Invoker</i> <b>SHALL</b> set the productType.productName to the product name of the client system.
<b>VIEW-T 28</b>	The <i>Service Invoker</i> <b>SHALL</b> set the productType.productVersion to the product version of the client system.
<b>VIEW-T 29</b>	The <i>Service Invoker</i> <b>SHALL</b> set the productType.platform to the client system vendor.

## 4.1.2 Output message data types

### 4.1.2.1 Common response status

All My Health Record System operations will return common response field.

Figure 4 – ResponseStatus

Table 17 - ResponseStatus Responses

Element Name	Type	Cardinality	Remarks
<b>ResponseStatus</b>		<b>1..1</b>	
code	String	1..1	Status Code for the result of the transaction
description	String	1..1	Brief status description
details	String	0..1	Additional detail of the response
<b>/ResponseStatus</b>			

#### Conformance points

<b>VIEW-T 30</b>	The <i>Service Provider</i> <b>SHALL</b> set the appropriate code from Table 18 for any business failure.
------------------	---

### 4.1.2.2 Error codes

The My Health Record System success and error codes in Table 18 are applicable to the View Service.

**Note:** The error code tables may be subject to extension as the development of the My Health Record System progresses.

Table 18 - Response Codes

Code	Description	View web service
PCEHR_SUCCESS	SUCCESS	All
PCEHR_ERROR_0004	Authorisation denied (e.g. insufficient privileges to retrieve the view)	All
PCEHR_ERROR_0011	Unexpected service exception error (e.g. in case view cannot be generated)	All

Code	Description	View web service
PCEHR_ERROR_0015	IHI is required	All
PCEHR_ERROR_0016	Invalid service version	getView
PCEHR_ERROR_0138	Invalid start date	getView
PCEHR_ERROR_0139	Invalid end date	getView
PCEHR_ERROR_0506	Invalid request	All
PCEHR_ERROR_1600	Too many entries found (more than 500 entries)	getAuditView
PCEHR_ERROR_3002	Document metadata failed validation	getChangeHistoryView, getDocumentList
PCEHR_ERROR_5101	eHealth Record Not Found	getIndividualDetailsView
PCEHR_ERROR_6001	No representatives found	getRepresentativeList
PCEHR_ERROR_6002	Invalid observation type	getView (Observation View)
PCEHR_ERROR_6003	Invalid document source	getView (Observation View)

For Common Header Status codes and descriptions, please refer to *My Health Record Document Exchange Technical Service Specification [PCEHR-DE-TSS]* and ATS 5820-2010.

## 4.2 My Health Record System views

This section describes different request and response data for the My Health Record System views provided by the getView web service. The subsections outline the request parameters and response data for the different views.

### 4.2.1 Prescription and Dispense View

The parameters for the Prescription and Dispense View getView request are given in Table 19.

Table 19 - prescriptionAndDispenseView parameters

Element Name	Type	Cardinality	Remarks
<b>prescriptionAndDispenseView</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version. Version <b>1.0</b> is the CURRENT version of the Prescription and Dispense View.
fromDate	Date	1..1	Filter the view by start date value. Prescription or dispense clinical event date (serviceStopTime).

Element Name	Type	Cardinality	Remarks
toDate	Date	1..1	Filter the view by end date value. Prescription or dispense clinical event date (serviceStopTime).

**/prescriptionAndDispenseView**

Please refer to Appendix A for the Prescription and Dispense View XDS schema.

This view data is returned as a CDA package.

For specific details of the view's data element returned in the getView response, also refer to the clinical document specifications defined for Prescription and Dispense View [PCEHR-PDV].

#### 4.2.2 Observation View

The parameters for the Observation View getView request are given in Table 20.

*Table 20 - observationView parameters*

Element Name	Type	Cardinality	Remarks
<b>observationView</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version. Version 1.0 is the CURRENT version of the Observation View.
fromDate	Date	1..1	Filter the view by start date value
toDate	Date	1..1	Filter the view by end date value
observationType	String	1..1	Values: 'HEADCIRCUMFERENCE', 'HEIGHT', 'WEIGHT', 'BMI'
documentSource	String	1..1	Values: 'PROVIDER', 'PERSONAL', 'ALL'
referenceData	String	1..1	Simple element reference data 'WHO' or 'CDC'

**/observationView**

Please refer to Appendix A for the Observation View XDS schema.

This view data is returned as a CDA package.

For further details of the view, see the Observation View – PCEHR Conformance Profile [PCEHR-OBS].

### 4.2.3 Health Check Schedule View

The parameters for the Health Check Schedule View getView request are given in Table 21.

Table 21 - healthCheckScheduleView parameters

Element Name	Type	Cardinality	Remarks
<b>healthCheckScheduleView</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version.
jurisdiction	String	1..1	Individual state's health check schedule. Enumerations: 'NSW', 'QLD', 'ACT', 'NT', 'VIC', 'WA', 'TAS' and 'SA'
<b>/healthCheckScheduleView</b>			

Please refer to Appendix A for the Health Check Schedule View XDS schema.

This view data is returned as a CDA package. For further details of the view, see the *Health Check Schedule View – PCEHR Conformance Profile* [PCEHR-HCSV].

### 4.2.4 Medicare Overview

The parameters for the Medicare Overview getView request parameters are given in Table 22.

Table 22 - Medicare Overview parameters

Element Name	Type	Cardinality	Remarks
<b>medicareOverview</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version. Two versions are available: Version <b>1.0</b> EXCLUDES document links in the narrative; Version <b>1.1</b> INCLUDES document links in the narrative,
fromDate	Date	1..1	Filter the view by start date value for PBS/MBS service items
toDate	Date	1..1	Filter the view by end date value for PBS/MBS service items
<b>/medicareOverview</b>			

#### **Informative note**

The information from the Australian Childhood Immunisation Register (ACIR) and Australian Organ Donor Register (AODR) will not have date range filtering applied in the view.

Please refer to Appendix A for the Medicare Overview XDS schema.

This view data is returned as a CDA package. For specific details of the view data element returned in the getView response, please refer to the specifications defined for Medicare Overview.

## 4.2.5 Pathology Report View

### 4.2.5.1 Request

The parameters for the Pathology Report View getView request parameters are given in Table 23.

Table 23 - pathologyReportView parameters

Element Name	Type	Cardinality	Remarks
<b>pathologyReportView</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version  Version <b>1.0</b> is the CURRENT version of the Pathology Report View.
fromDate	Date	1..1	Filter the view by start date value for the Pathology Report items based on the Specimen Collection Date
toDate	Date	1..1	Filter the view by end date value for Pathology Report items based on the Specimen Collection Date.
<b>/pathologyReportView</b>			

#### **Informative note**

Please refer to Appendix A for the Pathology Report View XDS schema.

This view data is returned as a XML document which is Base64 encoded in the response object.

### 4.2.5.2 Response

Please refer to Appendix A for the Pathology Report View Response XDS schema.

The data returned from in the Pathology Report View getView payload is provided in Table 24.

Table 24 - pathologyReportViewResponse Data

Element Name	Type	Cardinality	Remarks
<b>pathologyReportViewResponse</b>		<b>1..1</b>	
<b>viewMetadata</b>		<b>1..1</b>	
<b>individualProfile</b>		<b>1..1</b>	
ihiNumber	ihiNumber	1..1	A 16-digit string representing the individual's IHI

Element Name	Type	Cardinality	Remarks
individual	individualTypeSupp		
<b>/individualProfile</b>			
<b>viewParameters</b>		<b>1..1</b>	
dateFromFilter	date	1..1	The Date to Filter by Start Date which was passed by the parameter to the getView Service
dateToFilter	date	1..1	The Date to Filter by End Date which was passed by the parameter to the getView Service
viewVersionNumber	string	1..1	The version of the View Service which was returned in the View Response
<b>/viewParameters</b>			
informationAvailable	boolean	1..1	Indicates whether any Pathology Reports are available within the provided parameters
<b>/viewMetadata</b>			
<b>pathologyReport</b>		<b>0..*</b>	
dateAvailableToConsumer	string	1..1	The date on which the Pathology Report will be available to the consumer. (If this date is in the past, then the report is already available to the consumer.)  Note: If this report is superseded, than the dateAvailableToConsumer will also be superseded.  See Appendix C.2 for more information regarding date and time formats.
reportInformation	pathologyReportInformationDT	1..1	Report information such as a dates, status, document Identifiers.  See pathologyReportInformationDT and the Pathology Report Structured Content Specification [PATH-SCS] for further detail.
clinicalDocumentAuthor	providerInformationDT	1..1	The details of the author of the clinical document.  See providerInformationDT
reportingPathologistInformation	providerInformationDT	1..1	Pathologist who is responsible for the pathology test result.
testRequesterInformation	requesterInformationDT	1..1	Party that arranges provision of a service.

Element Name	Type	Cardinality	Remarks
<b>pathologyTestResult</b>		<b>1..*</b>	
specimenCollectionDate	string	1..1	See the Pathology Report Structured Content Specification for further detail.  See Appendix C.2 for more information regarding date and time formats.
pathologyDiscipline	CodedType	1..1	See the Pathology Report Structured Content Specification for further detail.
testResultName	CodedType	1..1	See the Pathology Report Structured Content Specification for further detail.
overallTestResultStatus	CodedType	1..1	See the Pathology Report Structured Content Specification for further detail  Also note that this element is being shortened as described in the informative note below and in Table 25.
pathologyReportViewResponse			
<b>/pathologyTestResult</b>			
<b>/pathologyReport</b>			
<b>/pathologyReportViewResponse</b>			

**Informative note**

This view data is returned as an XML document which is base64 encoded in the response object. For further details of the view, see the *eHealth Pathology Report View* [PATH-PG].

The *eHealth Pathology Report View* shortens the displayName for the overallTestResultStatus value. See Table 25 for details on how the HL7 0123 table is being shortened in the View Service.

*Table 25 - View Service HL7 0123 Table displayName shorting*

displayName as it appears in the document	Code	codeSystemName	codeSystem	Shortened Displayname for view
Correction to results	C	HL7 result Status	2.16.840.1.113883.12.123	Corrected

displayName as it appears in the document	Code	codeSystemName	codeSystem	Shortened Displayname for view
Final results; results stored and verified. Can only be changed with a corrected result.	F	HL7 result Status	2.16.840.1.113883.12.123	Final
Preliminary: A verified early result is available, final results not yet obtained.	P	HL7 result Status	2.16.840.1.113883.12.123	Preliminary
Correction to results	C	HL7 result Status	2.16.840.1.113883.12.123	Corrected

## 4.2.6 Diagnostic Imaging Report View

### 4.2.6.1 Request

The parameters for the Diagnostic Imaging Report View getView request parameters are given in Table 26.

Table 26 - diagnosticImagingReportView parameters

Element Name	Type	Cardinality	Remarks
<b>diagnosticImagingReportView</b>		<b>1..1</b>	
versionNumber	String	1..1	Version number of the view corresponding to the namespace version Version 1.0 is the CURRENT version of the Diagnostic Imaging Report View.
fromDate	Date	1..1	Filter the view by start date value for the Diagnostic Imaging Report items based on imaging date.
toDate	Date	1..1	Filter the view by end date value for Diagnostic Imaging Report items based on imaging date.
<b>/diagnosticImagingReportView</b>			

#### **Informative note**

Please refer to Appendix A for the Diagnostic Imaging Report View XDS schema.

This view data is returned as an XML document which is base64 encoded in the response object.

#### 4.2.6.2 Response

The data returned from in the Diagnostic Imaging Report View getView payload is provided in Table 27.

Table 27 - diagnosticImagingReportViewResponse data

Element Name	Type	Cardinality	Remarks
<b>diagnosticImagingReportViewResponse</b>		<b>1..1</b>	
<b>viewMetadata</b>		<b>1..1</b>	
<b>individualProfile</b>		<b>1..1</b>	
ihiNumber	ihiNumber	1..1	A 16-digit string representing the individual's IHI.
individual	individualTypeSupp	1..1	The individual who is the subject of this view payload.
<b>/individualProfile</b>			
<b>viewParameters</b>		<b>1..1</b>	
dateFromFilter	date	1..1	The Date to Filter by Start Date which was passed by the parameter to the getView Service.
dateToFilter	date	1..1	The Date to Filter by End Date which was passed by the parameter to the getView Service.
viewVersionNumber	string	1..1	The version of the View Service which was returned in the View Response.
<b>/viewParameters</b>			
informationAvailable	boolean	1..1	Indicates whether any diagnostic imaging reports are available within the provided parameters
<b>/viewMetadata</b>			
<b>diagnosticImagingReport</b>		<b>0..*</b>	

Element Name	Type	Cardinality	Remarks
dateAvailableToConsumer	string	1..1	The on date which the Diagnostic Imaging Report will be available to the consumer. (If this date is in the past, then the report is already available to the consumer.) Note: If this report is superseded, then the dateAvailableToConsumer will also be superseded.
reportInformation	diagnosticReportInformationDT	1..1	Report information such as dates, status, document identifiers. See diagnosticReportInformationDT and the Diagnostic Imaging Report Structured Content Specification [DIAG-SCS] for further detail.
clinicalDocumentAuthor	providerInformationDT	1..1	The details of the author of the clinical document. See providerInformationDT
reportingRadiologistInformation	providerInformationDT	1..1	Radiologist who is responsible for the report.
imagingRequesterInformation	requesterInformationDT	1..1	Party that arranges provision of a service.
<b>imagingExaminationResult</b>		<b>1..*</b>	
imagingServiceDateTime	string	1..1	See the Diagnostic Imaging Report Structured Content Specification [DIAG-SCS] for further detail See Appendic C.2 for more information regarding date and time formats

examinationResultName	CodedType	1..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
modality	CodedType	1..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
<b>anatomicalSiteDetails</b>		<b>0..*</b>	
anatomicalRegion	CodedType	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
<b>anatomicalLocation</b>		<b>0..*</b>	
anatomicalLocationName	CodedType	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
anatomicalLocationName	CodedType	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
laterality	CodedType	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
<b>/anatomicalLocation</b>			
<b>/anatomicalSiteDetails</b>			
overallTestResultStatus	CodedType	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail
imageLocationInformation	String	0..1	See the Diagnostic Imaging Report Structured Content Specification for further detail

Element Name	Type	Cardinality	Remarks
/imagingExaminationResult			
/diagnosticImagingReport			
/diagnosticImagingReportViewResponse			

**Informative note**

Please refer to Appendix A for the Diagnostic Imaging Report View Result XDS schema.

This view data is returned as a XML document which is base64 encoded in the response object. For further details of the view, see the *eHealth Diagnostic Imaging Report View* [DIAG-PG].

**4.2.7 Health Record Overview**

**4.2.7.1 Request**

The parameters for the Health Record Overview getView request parameters are given in Table 28.

*Table 28 – healthRecordOverview parameters*

Element Name	Type	Cardinality	Remarks
<b>healthRecordOverview</b>		<b>1..1</b>	
versionNumber	String	<b>1..1</b>	Version number of the view corresponding to the namespace version. Version <b>1.0</b> has been DEPRECATED. No new implementations should use this version of the Health Record Overview. If you require further detail please consult the previous version of this document [ <a href="#">MHR-VS-TSS-1.6.1</a> ]. Version <b>1.1</b> is the CURRENT version of the Health Record Overview.
clinicalSynopsisLength	Int	<b>1..1</b>	Specifies the character length of the Clinical Synopsis that is to be returned for Event Summary Documents. If '0' is supplied the full clinical synopsis will be returned.
<b>/healthRecordOverview</b>			

**Informative note**

Please refer to [Appendix A](#) for the Health Record Overview XDS schema.

**4.2.7.2 Response**

The data returned from in the Health Record Overview getView payload is provided in Table 29.

Table 29 – healthRecordOverview Data

Element Name	Type	Card - inality	Remarks
<b>healthRecordOverviewResponse</b>		<b>1..1</b>	
<b>viewMetadata</b>		<b>1..1</b>	
<b>individualProfile</b>		<b>1..1</b>	
ihiNumber	ihiNumber	<b>1..1</b>	A 16-digit string representing the individual's IHI
individual	<a href="#">individualType</a> <a href="#">Supp</a>	<b>1..1</b>	The individual who is the subject of this view payload
indigenousStatus	String	<b>0..1</b>	Will return a single integer in the string which represents the following: <ul style="list-style-type: none"> <li>• "1" - Aboriginal but not Torres Strait Islander origin</li> <li>• "2" - Torres Strait Islander but not Aboriginal origin</li> <li>• "3" - Both Aboriginal and Torres Strait Islander origin</li> <li>• "4" - Neither Aboriginal nor Torres Strait Islander origin</li> <li>• "9" - indigenous status not stated/inadequately described</li> </ul>
veteranAndADFStatus	String	<b>0..1</b>	Will return a single integer in the string which represents the following: <ul style="list-style-type: none"> <li>• "1" - Never an Australian Defence Force (ADF) member</li> <li>• "2" - Current or former serving ADF member who is a Department of Veterans' Affairs (DVA) client</li> <li>• "3" - Current or former serving ADF member who is not a DVA client</li> <li>• "9" - Veteran status not stated/inadequately described</li> </ul>

Element Name	Type	Card - inality	Remarks
<b>/ individualProfile</b>			
<b>viewParameters</b>		<b>1..1</b>

<b>/ recentDocuments</b>			
<b>/ healthRecordOverviewResponse</b>			

**Informative note**

Please refer to [Appendix A](#) for the Health Record Overview Result XDS schema.

This view data is returned as an XML document which is base64 encoded in the response object.

For further details of the view, see the Health Record Overview – Presentation and Data Usage Guide [\[HRO-PG\]](#).

The format for [XSDDocumentEntry.uniqueId] is described in conformance point DEXS-T 56 in the *PCEHR Document Exchange Technical Service Specification*.

## 5 Engineering viewpoint

The engineering viewpoint includes definitions of mechanisms and functions to support distributed interactions between computational objects as a series of templates (i.e. patterns) for computational interactions. These, in turn, are parameterised to support a range of different policies defined in the enterprise, information or computational specifications.

### 5.1 Discovery services

The location of the services exposed by the My Health Record System will be shared between parties before interaction. Dynamic discovery mechanisms will not be provided.

## Appendix A XSD and WSDL

### View Service schemas

The following XML schema defines the XSD for IHI ITI-58 Registry Store Query messages. The query.xsd can be found in the XDS.b supporting material [XDS.b SM] (/schema/ebRS).

Table 32 provides the name and description of the XML schema relevant for this specification. The schemas (XSD files) are published in the Australian Digital Health Agency's *My Health Record B2B Client Library - Schema WSDL v4.0.0* [MHR-B2B-LIB].

Table 30 - View XML Schemas

XML schema	Schema description
PCEHR_GetChangeHistoryView.xsd	Defines the data type for getChangeHistoryView operation.
PCEHR_GetView.xsd	Defines the data type for getView operation.
PCEHR_GetAuditView.xsd	Defines the data type for getAuditView operation.
PCEHR_CommonTypes.xsd	Defines the XSD for common data associated with all the WSDLs interface.
PCEHR_GetRepresentativeList.xsd	Defines the data type for the getRepresentativeList
PCEHR_GetIndividualDetailsView.xsd	Defines the data type for the GetIndividualDetailsView
PCEHR_PrescriptionAndDispenseView.xsd	Defines the data type for the PrescriptionAndDispense View
PCEHR_ObservationView.xsd	Defines the data type for the Observation View
PCEHR_HealthCheckScheduleView.xsd	Defines the data type for the HealthCheckSchedule View
PCEHR_MedicareOverview.xsd	Defines the data type for the MedicareOverview
PCEHR_PathologyReportView.xsd	Defines the data type for the PathologyReport View
PCEHR_PathologyReportView_Response.xsd	Defines the data type of the response from the PathologyReport View.
PCEHR_DiagnosticImagingReportView.xsd	Defines the data type for the PathologyReport View
PCEHR_DiagnosticImagingReportView_Response.xsd	Defines the data type of the response from the PathologyReport View.
PCEHR_HealthRecordOverview.xsd	Defines the data type for the HealthRecordOverview
PCEHR_HealthRecordOverview_Response.xsd	Defines the data type of the response from the HealthRecordOverview.

XML schema	Schema description
PCEHR_AdvanceCarePlanningView.xsd	Defines the data type for the AdvanceCarePlanningView
PCEHR_AdvanceCarePlanningView_Response.xsd	Defines the data type of the response from the AdvanceCarePlanningView.

## Web service interfaces

The following WSDLs specification defines the My Health Record System View Service SOAP interface. They are published in the Australian Digital Health Agency’s *My Health Record B2B Client Library - Schema WSDL v4.0.0* [MHR-B2B-LIB].

*Table 31 - Web Service Interfaces*

Element Name	Type	Cardinality	Remarks
<b>contactDetailsDT</b>	<b>Complex</b>	<b>1..1</b>	
use	String (“WP”, “H”, “HP”, “HV”, “AS”, “EC”, “MC”, “PG”)	1..1	<ul style="list-style-type: none"> <li>• Workplace</li> <li>• Home</li> <li>• Primary Home</li> <li>• Vacation Home</li> <li>• Answering Service</li> <li>• Emergency Contact</li> <li>• Mobile Contact</li> <li>• Pager</li> </ul>
value	anyURI	1..1	Communication Details URI The prefix of the URI indicates the type of contact detail, such as ‘tel’ being a telephone number.

**/contactDetailsDT**

### timeStampDT

Element Name	Type	Cardinality	Remarks
<b>timeStampDT</b>	<b>Complex</b>	<b>1..1</b>	In most cases, only some of the time fields will be populated, depending on whether the time being represented is a single specific time, or a time range.
Value	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0 [HL7-CDA]

Element Name	Type	Cardinality	Remarks
low	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0
high	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0
width	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0
center	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0
width	dateTime	0..1	See the XML Implementation Technology Specification – Data Types from the CDA® Release 2.0

**/timeStampDT**

**documentDT**

Element Name	Type	Cardinality	Remarks
<b>documentDT</b>	<b>None</b>	<b>1..1</b>	
effectiveDateTime	dateTime	1..1	See the CDA® R MIM ClinicalDocument.effectiveTime Section from CDA® Release 2.0 [HL7-CDA]
documentLink	anyURI	1..1	A My Health Record document link format to the document
documentTypeName	String	1..1	The Type Name of the Document.
documentTypeCode	CodedType	1..1	The Type Code of the Document
documentAuthorPersonName	nameTypeSupp	1..1	The Name of the Person Author.
documentAuthorPersonIdentifier	String	1..1	The identifier of the Person Author.
documentAuthorRole	String	1..1	The Role of the Author.
documentAuthorOrganisationName	String	1..1	The Organisation Name.
documentAuthorOrganisationIdentifier	String	1..1	The Organisation’s HPI-O.

Element Name	Type	Cardinality	Remarks
clinicalSynopsis	String	0..1	The Clinical Synopsis from Event Summaries.  Note: This field is a String. Each character should be rendered 'as is'. No formatting or HTML characters is permitted in this field.

**/documentDT**

**nameTypeDT**

Element Name	Type	Cardinality	Remarks
<b>nameTypeDT</b>		<b>1..1</b>	
nameTitle	String	0..*	See the Participation Data Specification [PAR-DS]
familyName	String	1..1	See the Participation Data Specification
givenName	String	0..*	See the Participation Data Specification
nameSuffix	String	0..*	See the Participation Data Specification
usage	Usage ("M", "N", "O", "B", "L", "R")	0..1	<ul style="list-style-type: none"> <li>• Maiden Name (Name at birth)</li> <li>• Newborn Name</li> <li>• Other Name (Alias)</li> <li>• Professional or Business Name</li> <li>• Registered Name (Legal Name)</li> <li>• Reporting Name</li> </ul> See the Participation Data Specification for further details.

**/nameTypeDT**

**pathologyReportInformationDT**

Element Name	Type	Cardinality	Remarks
<b>pathologyReportInformationDT</b>		<b>1..1</b>

#### **/diagnosticReportInformationDT**

#### **requesterInformationDT**

Element Name	Type	Cardinality	Remarks
<b>requesterInformationDT</b>		<b>1..1</b>	
testRequestId	String	0..1	The Test Request Identifier.
dateTimeRequested	String	1..1	The Date and Time that the request was made. (Note: Time may not always be available.)
providerOrganisationName	String	0..1	The Requesting Organisation's Name.
providerOrganisationIdentifier	String	0..1	The Requesting Organisation's HPI-O.
providerName	nameTypeDT	1..1	The Requesting Healthcare Provider's Name.
providerIdentifier	String	0..1	The Requesting Healthcare Provider's Identifier.

Element Name	Type	Cardinality	Remarks
<b>/requesterInformationDT</b>			

### providerInformationDT

Element Name	Type	Cardinality	Remarks
<b>providerInformationDT</b>		<b>1..1</b>	
healthcareProviderOrganisationName	String	1..1	The healthcare provider's organisation name
healthcareProviderOrganisationIdentifier	String	1..1	Minimum Length = 16 Maximum length = 6
healthcareProviderName	nameTypeDT	1..1	The healthcare provider's name
healthcareProviderIdentifier	String	0..1	The healthcare provider's unique identifier
healthcareProviderRole	String	0..1	The healthcare provider's role
<b>/providerInformationDT</b>			

### individualTypeSupp

Element Name	Type	Cardinality	Remarks
<b>individualTypeSupp</b>		<b>1..1</b>	
name	nameTypeSupp	1..1	Individual's name
sex	String	1..1	See element in Common Types schema, which is referenced in Appendix A.
dateOfBirth	Date	1..1	The individual's date of birth
<b>/individualTypeSupp</b>			

## Appendix C My Health Record formats

### My Health Record document link format

A document link is denoted by a URI of the following format:

```
pcehr:1.2.36.1.2001.1007.10.[PAI-R]/[doc-id]
```

Where PAI-R is a My Health Record system Assigned Identifier for a Repository and doc id is the identifier of a clinical document stored within the repository. The PAI-R may identify the My Health Record system Repository or it may identify a Registered Repository.

The format for [doc-id] is “[root]^[extension]” when an extension is present, otherwise it is “[root]”, as shown by the following mappings:

**Example 1** if doc-id is 013d5c25-1682-45bc-8984-ce0773df9a0d then document id is represented as:

```
<id root="013d5c25-1682-45bc-8984-ce0773df9a0d"/>
```

**Example 2** if doc-id is 2.25.295835386144617648525177275513132113508 then document id is represented as:

```
<id root="2.25.295835386144617648525177275513132113508"/>
```

**Example 3** If doc-id is 2.25.295835386144617648525177275513132113508^1 then document id is represented as:

```
<id root="2.25.295835386144617648525177275513132113508" extension="1"/>
```

### Date format

The My Health Record system returns most dates as a UTC formatted date (and optionally time) as a string.

Below are the possible formats:

- YYYY-MM-DD
- YYYY-MM-DDThh:mm
- YYYY-MM-DDThh:mm:ss
- YYYY-MM-DDThh:mmTZD (With the TZD Fixed to 'Z' representing Zulu time)
- YYYY-MM-DDThh:mm:ssTZD (With the TZD Fixed 'Z' representing Zulu time)
- YYYY-MM-DDThh:mm:ss.sTZD (With the TZD Fixed 'Z' representing Zulu time)

## Acronyms

Acronym	Description
CIS	clinical information system
CSP	contracted service provider
HI	Healthcare Identifiers
PCEHR	personally controlled electronic health record (Now known as the My Health Record system)
SCS	structured content specification
WSDL	Web Service Definition Language
WSP	Web Service Profile – Commonly used to refer to the <i>ATS 5820-2010 E-health Web Services Profile, March 2010</i> [ATS 5820-2010].
XDS	Cross-Enterprise Document Sharing (XDS.b) IHE Integration Profile as specified in [ITITF-1], Chapter 10 and extended by material relevant to XDS.b in [ITITF-2A], [ITITF-2B], [ITITF-2x], [ITITF-3].
XSD	XML schema definition

## Glossary

Note: The core set of terms used within the My Health Record system are specified in the *Glossary* [MHR-GLS].

---

<b>Term</b>	<b>Meaning</b>
NASH certificate	A NASH certificate is a digital certificate that is compliant with the NASH certificate policies.
Service	A service encapsulates the collaboration which occurs between two or more parties to achieve a goal. Each participant in the service may offer multiple Service Interfaces.
Service interface	A service interface is a logical grouping of operations which be offered by a participant within the context of a service.
Service operation	A service operation is a specific function which supports communication between two participants.

---
