Australian Medicines Terminology v3 – Common v1.6

Release Note

30 November 2015
Approved for external information

Summary

EP-2192:2015 Australian Medicines Terminology v3 – Common v1.6

This end product contains product components that are related to the Australian Medicines Terminology (AMT) v3 model.

Release rationale

This release updates the following documents:

- *Australian Medicines Terminology v3 Model - Technical Implementation Guide,* which specifies the data model for the AMT (v3 model), giving special attention to how the concepts, relationships, and descriptions are structured in the AMT. It provides implementation guidance to software developers and technical consumers implementing AMT v3 for common use cases.
    - Added Section 3.3 Dose Based Prescribing and associated reference sets.
    - Added Section 7.20 SNOMED CT®-AU[1] and AMT integration.
    - Amended Section 7.15 Identifying versions of AMT releases and Section 7.19 Duplicate metadata concepts.
- *Clinical Terminology – Guidance for Use of Medical Nomenclatures in Information Exchange,* which provides guidance for healthcare software systems that produce and consume clinical messages containing medical nomenclatures. This guidance also helps software developers to manage risks when developing systems using medical nomenclatures.
    - Updates to:
        - Section 2.1.1:

            Requirement 022525 SNOMED CT-AU and AMT version 3 coding system versions in CDA documents; and

        - Section 2.1.2:

            Requirement 022527 SNOMED CT AU and AMT version 3 coding system versions in non-CDA messages.

Package inclusions

New

None
