

HIPS

Product Data Sheet

7 November 2016 v6.1
Approved for external information
Document ID: DH-2446:2016

Key features

- Middleware for seamless integration with national digital health infrastructure
 - Healthcare Identifiers (HI) Service
 - My Health Record system
 - Secure Message Delivery (SMD)
 - National directory services (NHSD, NEPS)
- Packaging, upload, download and display of CDA™¹ documents
- Generation of pathology and diagnostic imaging report CDA documents from HL7™v2 messages
- Source code, binary code and comprehensive documentation

Usage (internal, external)

- Large-scale digital health implementations
- Vendors of digital health systems

Format

- Sample code, SQL scripts, WSDL and XML schema
- Binary code (excludes UI component)
- Comprehensive documentation

Overview

The HIPS product enables the seamless integration of digital health systems with national digital health infrastructure services, such as the Healthcare Identifiers Service, the My Health Record system, Secure Message Delivery (SMD) systems and national directory services (NHSD, NEPS).

HIPS is a middleware product offering standards-based interfaces for seamless integration with systems like patient administration systems, clinical information systems, and laboratory and radiology information systems. It is aimed primarily at supporting large-scale digital health environments typically found in organisations such as hospitals and diagnostic service providers; however, it is also suitable for direct integration with digital health products.

¹ HL7 and CDA are trademarks of Health Level Seven International and are registered with the United States Patent and Trademark Office.

Key features of HIPS include:

Infrastructure service	HIPS features
Healthcare Identifiers Service	<ul style="list-style-type: none"> • Search healthcare identifiers • Retrieve healthcare identifiers • Cache healthcare identifiers
My Health Record system	<ul style="list-style-type: none"> • Assisted registration of patients • Determine whether a patient has a My Health Record • Upload of clinical documents • Packaging and digital signing of clinical documents • Conversion of HL7v2 pathology and diagnostic imaging reports: <ul style="list-style-type: none"> ○ HL7v2 ORU messages to CDA documents ○ ORU messages with attached PDF reports only ○ Seamless MLLP protocol for ORU message exchange • Displaying a patient’s My Health Record • Download and display of clinical documents
Point-to-point (P2P) messaging using Secure Message Delivery (SMD)	<ul style="list-style-type: none"> • Provider address lookup from the Local Health Service Directory (LHSD) • Sending and receiving of messages between providers based on Secure Message Delivery (SMD) specifications.
National directories	<ul style="list-style-type: none"> • Maintenance and automatic synchronisation of a LHSD with information from the National Health Service Directory (NHSD) and associated data sources provided by the National Endpoint Proxy Service (NEPS).

Background

The Australian Digital Health Agency has a strategic objective to support and facilitate the adoption of national digital health services across the health sector. A key element of delivering on this objective is supporting the implementation of solutions that integrate with the national Healthcare Identifiers Service, the My Health Record system and national directory services, and that facilitate the secure exchange of clinical information based on Secure Message Delivery specifications.

The Agency also seeks to collaborate through its implementations projects. This includes the compilation of targeted information for implementers, particularly the sharing of lessons learnt from previous implementation projects.

One result of this work is the development of the HIPS middleware solution, which has successfully been used by both jurisdictional and private implementation projects.

Product components

The HIPS end product consists of the following product components:

Component	Description
Binary Software Package	Binary code for the Core component of HIPS: <ul style="list-style-type: none"> • Core component: <ul style="list-style-type: none"> ○ Binary code ○ SQL database scripts • Documentation: <ul style="list-style-type: none"> ○ Installation Guide (Core, P2P) ○ Patient Administration HL7 Message Profile ○ Pathology Report HL7 Message Profile ○ Diagnostic Imaging Report HL7 Message Profile ○ Patient Record Merging Profile ○ Service Catalogue (Core, P2P) ○ Module Guide (Core, P2P) ○ Evaluation Guide • HIPS Binary Software - Software Licence Terms and Conditions • Third-Party Software Licences
Source Code Software Package	Sample code for all components of HIPS: <ul style="list-style-type: none"> • Core component: <ul style="list-style-type: none"> ○ Source code (predominantly C#) ○ WSDL and schema files ○ SQL database scripts • UI component: <ul style="list-style-type: none"> ○ Source code (predominantly C#) ○ SQL database scripts • Documentation: <ul style="list-style-type: none"> ○ Build Guide ○ Installation Guides (Core, P2P and UI) ○ Patient Administration HL7 Message Profile ○ Pathology Report HL7 Message Profile ○ Diagnostic Imaging Report HL7 Message Profile ○ Patient Record Merging Profile ○ Service Catalogue (Core, P2P) ○ Module Guides (Core, P2P and UI) ○ Evaluation Guide • Source Code Licence and Production Disclaimer • Third-Party Software Licences

Documentation structure

The HIPS end product contains a substantial number of guidance documents. To ensure optimum benefit from this documentation, the Agency recommends to access the documents in a particular sequence, depending on the particular use case.

Use case	Recommended reading sequence
Product overview	<ol style="list-style-type: none"> 1 Product Data Sheet 2 Release Note 3 Module Guide (Core) 4 Module Guide (P2P) 5 Module Guide (UI)
Product evaluation	<ol style="list-style-type: none"> 1 Build Guide 2 Initial and Clean Installation Guide (Core) 3 Initial and Clean Installation Guide (P2P) 4 Initial and Clean Installation Guide (UI) 5 Evaluation Guide
Integration with existing systems	<ol style="list-style-type: none"> 1 Pathology Results HL7v2 Profile 2 Diagnostic Imaging Results HL7v2 Profile 3 Patient Administration HL7v2 Profile 4 Patient Record Merging Profile 5 Service Catalogue (Core) 6 Service Catalogue (P2P)
Legal terms and licences	<ol style="list-style-type: none"> 1 Source Code Licence and Production Disclaimer 2 HIPS Binary Software – Software Licence Terms and Conditions 3 Third-Party Software Licences

System requirements

HIPS is based on a number of underlying platform software products and frameworks. This release of HIPS has successfully been tested against the products and product versions listed in the sections below.

Usage of HIPS with product versions other than those listed may require retesting of the product. This may include the need to repeat all required conformance and notice-of-connection tests.

HIPS incorporates a number of third-party libraries that are listed in the *Third-Party Software Licences* document included in this release. These libraries are distributed as part of the HIPS product.

For the build of the HIPS components from its source code version, a number of software development tools are required. These tools are listed in the *Build Guide* included in this release.

HIPS Core component

The HIPS Core component is a server running on the following software platforms:

Operating system	Windows Server 2008 R2 or Windows Server 2012 R2
Framework	.NET 4.5 or higher
Database Management System	Microsoft SQL Server 2008 R2 or Microsoft SQL Server 2012

HIPS UI component

The HIPS UI component is running on a dedicated server or equivalent virtual machine based on the following software platforms:

Operating system	Windows Server 2008 R2 or Windows Server 2012 R2
Framework	.NET 4.5 or higher
Database Management System	Microsoft SQL Server 2008 R2 or Microsoft SQL Server 2012

The HIPS UI component is designed to interact with web browsers for the rendering of the user interface. The user interface has been tested on the following software platforms:

Operating system	Windows 7 or Windows 8
Web browser	Microsoft Internet Explorer 11; Google Chrome 43; Mozilla Firefox 39

Licence

The HIPS Binary Software is licensed under the HIPS Binary Software – Software Licence Terms and Conditions (included in the HIPS Binary Software Package).

The HIPS Source Code is licensed under the Source Code Licence and Production Disclaimer (included in the HIPS Source Code Software Package).

Downloads

HIPS is available from the Agency website:

Support

The HIPS product represents sample code that implementers are free to modify, customise and integrate with their own software implementations. For this reason, the Agency's ability to provide technical support is limited. Third-party technical support is available from commercial partner organisations. Implementers are encouraged to take out support contracts with suitable support providers to ensure the successful implementation and operation of HIPS.

For further information about the product or to provide feedback, please email the Agency Help Centre at help@digitalhealth.gov.au or phone 1300 901 001. Your views on the scope and usability of HIPS will inform future releases.
