1. Introduction

1.1 Purpose

The purpose of this document is to define the message interface for notifying patient administration events to the Healthcare Identifier and PCEHR¹ Services (eHISC).

Please note that this version of the HL7 profile for eHISC has originated from a detailed HL7 profile and may contain more information than required in forming HL7 messages for loading to eHISC.

It can be used by jurisdictions to understand the information passed in the HL7 messages and the portions relevant to eHISC.

This document describes the message and segment definitions that are required, expected and processed by the eHISC application.

eHISC uses the standard message format described herein. The standard message format in use is HL7 2.3.1².

Special attention needs to be paid to the interpretation of the A34 Merge Enterprise ID, A43 Move MRN to Enterprise ID and A36 Merge MRN messages, and the use of patient identifiers.

1.2 Scope

This profile covers all messages / message segments that have been standardised. The document currently describes messages that originate from Patient Administration systems, but in time can cover standardised messages from any source.

This profile does not describe any functional requirements, such as archiving or error reporting, as these are to be covered by other documentation.

1.3 Assumptions

The following assumptions have been made in the development of this profile:

- HL7 message segments will be sent in the order shown under "Message Definition" below;
- HL7 message continuation standard will **not** be used and therefore each message sent/received must be complete;
- Confidential information sent across the interface will be accepted "as is";
- HL7 Sequence Numbering is not used.

¹ **Disclaimer:** PCEHR means the My Health Record, formally the "Personally Controlled Electronic Health Record", within the meaning of the *My Health Records Act 2012* (Cth), formerly called the *Personally Controlled Electronic Health Records Act 2012* (Cth).

² Variations to HL7 2.3.1 are denoted in appendix B

1.4 Special Rules

The following rules have been made in the development of this profile:

- The AL1 (Alerts & Allergies) segment is ignored by eHISC.
- The NTE segment is ignored by eHISC.

1.5 Definitions and Acronyms

Item	Definition
ADT	Admission, Discharge, Transfer. Class of HL7 message types. ADT is also an Application Code used in MSH.3 and MSH.5
ESB	Enterprise Service Bus – integration hub for routing and transforming messages within and between healthcare facilities.
HL7	Health Level Seven
eHISC	eHealth Integration Sample Code
PMI	Patient Master Index – often used to describe an informal class of HL7 ADT messages – includes updates to patient demographics and merge/unmerge message types. PMI is also an Application Code used in MSH.3 and MSH.5
MRN	Medical Record Number, identified by the code “MR” in PID-3. Ideally one MRN is allocated by the hospital for each patient, though it is common to temporarily allocate a new MRN for emergency patients until their identity is confirmed. These temporary MRNs should be merged back to the original MRN for the patient using an A36 Merge MRN message. This number stored in HospitalPatient.Mrn and is the primary identifier used to find the existing patient records in the eHISC database.
OPD	Outpatient Department – often used to describe an informal class of HL7 message types – such as appointment/booking/scheduling messages. OPD is also an Application Code used in MSH.3 and MSH.5
StatePatientID	Unique Health Identifier – this code is used in PID-3 or PID-2 to identify the enterprise ID for the patient, which determines which PatientMaster the patient is attached to. HospitalPatient records will move from one PatientMaster to another if their StatePatientID changes. See the eHISC Merging specification for more details. It is perfectly acceptable to operate eHISC using only the MRN and not to send in enterprise IDs.

1.6 Current Environment

The message segments defined herein are the segments used in the eHISC application and cover only the essential PMI / ADT message segments. The current environment is as follows:

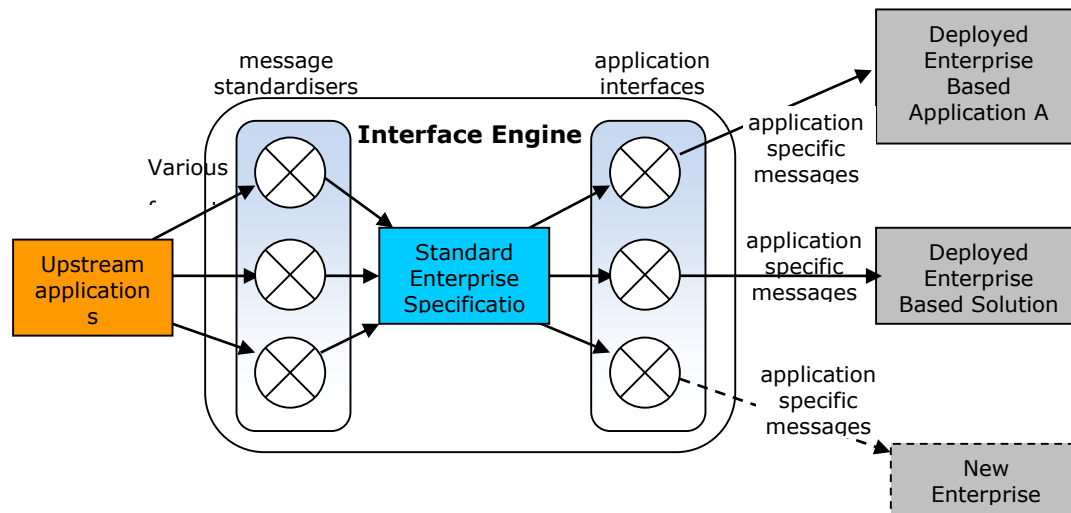

Figure 1: Standardisation transformations

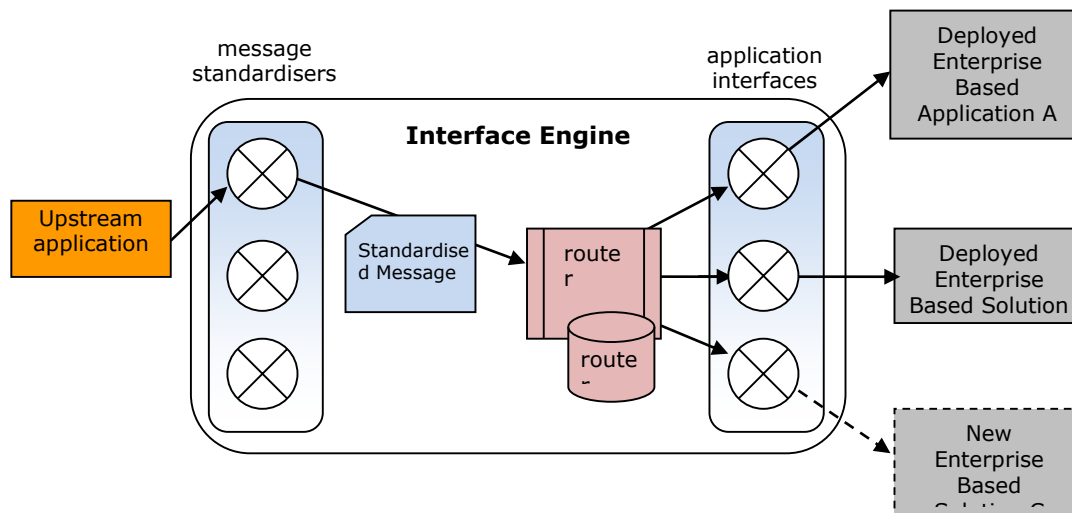

Figure 2: Message instance

2. High Level HL7 – eHISC Usage

eHISC may be used in one of the following models:

- No PAS events notified: all IHIs are obtained by a separate application. The ValidatedIhi parameter is used on all calls to eHISC services (including IsPcehrAdvertised, UploadOrSupersedeDocument and Remove), and eHISC creates stub patient and stub episode records.
- Only patient related (PMI) events are notified. On receipt, eHISC performs IHI search and validation, and checks for advertised PCEHR. The GetValidatedIhi method is used to retrieve the IHI from eHISC. No episode related events are notified. When uploading or removing a document, the ValidatedIhi parameter is used and eHISC creates stub episode records.
- Both patient (PMI) and episode (ADT) related events are notified. When uploading or removing a document, the MRN or SAUHI (StatePatientId) parameters may be used. eHISC will not create any stub records.

Within each class, the following messages represent the minimal set of PMI and ADT events that must be notified to eHISC, to support IHI searching and uploading documents to PCEHR.

Class	Event description	Typical message
PMI	When registering a new patient, to trigger an IHI search and check whether PCEHR exists.	ADT^A28
PMI	When changing the name, sex, DOB, MCN or DVA, to validate the IHI with the new details and check whether a PCEHR exists.	ADT^A31
PMI	When merging two MRNs, to ensure the right episode is matched for a later document upload or removal.	ADT^A36
ADT	When an inpatient is admitted, to record the admission date/time and check whether a PCEHR exists.	ADT^A01
ADT	When changing the admission date/time, to ensure the right episode is matched for a later document upload or removal.	ADT^A08

Other PAS events, such as transfers (A02) or discharges (A03) are not required for correct operation of eHISC Core, but are required for eHISC UI to show where patients are located, and when they have been discharged.

2.1 Episode Lifecycle Mappings

eHISC will determine the current status of an episode using a set of conditional rules. These rules are documented in the table below. The resulting ID is stored in the EpisodeLifecycleId column of the Episode table.

Note that the episode lifecycle is not critical to the normal operation of eHISC Core but is used by eHISC UI and may assist with identifying which patients are currently in hospital for targeting the reconciliation of IHI lookups or for reporting purposes.

Events	Conditions	ID	Description
Event "A01" - Admit Patient	Always	11	Admitted
Event "A03" - Discharge Patient	Always	13	Discharged
Event "A05" - Pre-Admit	Always	9	Pre-admit
Event "A11" - Cancel Admission	Always	12	Cancelled Admission
Event "A13" - Cancel Discharge	Always	11	Admitted
Event "A38" - Cancel Pre-Admit	Always	10	Cancelled Pre-admit
Other events including: Event "A02" - Transfer Patient Event "A08" - Update Episode	If the admission date is in the future.	9	Pre-admit
	If the admission date is in the past, and there is either no discharge date or the discharge date is in the future.	11	Admitted
	If the discharge date is in the past.	13	Discharged
Any case that does not match a condition above		-1	Unknown

2.2 Medical Record Numbers

When processing HL7 messages, eHISC uses the Medical Record Number (MRN) as the primary identifier to find existing patient records in the database. The MRN must be represented in the PID-3 Patient Identifier List by an entry such as:

- "000123456^^^RNH^MR"

Where "000123456" is the MRN itself, "RNH" is a code for the hospital that allocated this MRN, and "MR" is a code that indicates that this is an MRN.

The maximum MRN length that eHISC can handle is 20 characters.

The hospital codes for use in PAS HL7 messages must be configured in the eHISC HospitalCode table and have a CodeSystemId of 2 which corresponds to a code system "pasFacCd".

2.2.1 Zero Padding of MRNs

Jurisdictions operate various patient administration systems that allocate MRNs of various lengths. Some PAS systems allocate MRNs of a variable length with no zeros on the left, while others automatically add zeros on the left to pad to either 6 or 8 digits.

The functional design specifies that eHISC will standardise on an MRN length of 9 digits. To achieve this, any MRN from a PAS must have zeros added to the beginning, until it reaches 9 digits in length.

eHISC can handle both numeric and non-numeric MRNs from 1 to 20 characters in length. To meet the requirement, any MRN that is input via the HL7 interface will have '0' characters added to the beginning until the length reaches 9 characters. This applies equally to numeric and non-numeric MRNs.

If the MRN is already 9 or more characters in length, then no further padding is added.

For example:

- "123456" (6 digits) will be padded with 3 zeros and stored as "000123456"
- "123456789" (9 digits) will not be padded
- "1234567890123456" (16 digits) will not be padded
- "ABCD" (4 letters) will be padded with 5 zeros and stored as "00000ABCD"

2.3 A01 – Admit a Patient

The following HL7 message can be used to load a patient into the eHISC system:

```

```

Only the following segments are used by eHISC:

Segment	Name	Required/Optional	Freq. of Occurrence
MSH	Message Header	R	1
PID	Patient Identification	R	1
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1

Mappings

The structures of the following segments remain constant across message types:

- [MSH](#) – message header
- [PID](#) – patient identification
- [PV1](#) – patient visit
- [PV2](#) – patient visit additional information

e.g. MSH parts used by eHISC:

```
MSH|^~&|ADT|MCH|ESB|TEST
HEALTH|20130304015453||ADT^A03|2013030401545318172354|P|2.3||AL|AL|AUS|ASCII|ENG|
```

2.5 A28 – Add Person Information

The A28 message adds patient demographic information to eHISC. Only the following segments are required:

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
PID	Patient Identification	R	1

Sample message:

```
MSH|^~\&|ADT|RNH|ESB|RCH|20130304022019||ADT^A28|10795388133402191769|P|2.3.1|||AL|NE|AU|ASCII|

3. Low Level Protocol

3.1 Communications

The preferred communication method with eHISC is via SOAP web services. The details of the SOAP communication are as follows.

Summary	
Connectivity:	SOAP 1.2 on HTTP 1.1 (optionally on TLS 1.0)
Connection Type:	Single Message (est. by sending system)
End of Segment:	Carriage Return
Character Set:	ASCII

3.2 Character Encoding/Standard

All messages should comply with the ISO-1 (ASCII) character set.

3.3 Message Framing

The message framing convention used will be SOAP Version 1.2. The web service description (WSDL) and XML schemas (XSD) are in the *Message framing WSDL and XML schemas* folder (included in the same zip file as this document).

The "messageForm" parameter should be represented with a CDATA tag. Each HL7 segment will end with a carriage return; the final segment in the message will end with a carriage return, followed by the end of CDATA tag.

For Example:

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS/Services/2012/01"
  xmlns:hps="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas">
  <soap:Header xmlns:wsa="http://www.w3.org/2005/08/addressing">
    <wsa:Action>http://schemas.HIPS/Services/2012/01/DatabaseLoaderService/NotifyPasEvent</wsa:Action>
    <wsa:To>http://localhost:52500/DatabaseLoaderService/HIPS.Service.DatabaseLoaderService</wsa:To>
  </soap:Header>
  <soap:Body>
    <ns:NotifyPasEvent>
      <ns:messageForm><![CDATA[MSH|^~\&|ADT|WCH|ESB|ESB|20130617130500||ADT^A28|1240|P|2.3.1|||AL|NE|AU|ASCII|EN
PID||100012345678^^^^StatePatientID|000123456^^^WCH^MR~56789123451^^^^MC||ROSE^JOAN^T^^MISS^^L^A||20130614|F|
]]>
      </ns:messageForm>
      <ns:user>
        <hps:Role>AuthorisedEmployee</hps:Role>
      </ns:user>
    </ns:NotifyPasEvent>
  </soap:Body>
</soap:Envelope>
```

4. Application Level Protocol

4.1 Message Events/Triggers

The following HL7 messages represent the standard messages and segments that can be sent to eHISC. Those messages in yellow represent the minimal set of messages to support IHI searching and uploading documents to PCEHR on eHISC, if using the MRN model of eHISC operation, and not the Validated IHI model.

The A36 Merge message is only necessary if the source of MRNs can merge MRNs, moving episodes from one MRN to another.

HL7 Event	Message Type	Description	Originating system
A01	ADT^A01	Admit a patient	ADT
A02	ADT^A02	Transfer a patient	ADT
A03	ADT^A03	Discharge a patient	ADT
A05	ADT^A05	Pre-admit a patient (For theatres, maternity etc)	ADT
A08	ADT^A08	Update patient information	ADT
A11	ADT^A11	Cancel admit	ADT
A12	ADT^A12	Cancel transfer	ADT
A13	ADT^A13	Cancel discharge	ADT
A16	ADT^A16	Pending Discharge	ADT
A20	ADT^A20	Bed Status Update	ADT
A21	ADT^A21	Leave of absence – out (leaving)	ADT
A22	ADT^A22	Leave of absence – in (returning)	ADT
A25	ADT^A25	Cancel pending discharge	ADT
A28	ADT^A28	Add person information	PMI
A31	ADT^A31	Update person information	PMI
A34	ADT^A34	Merge Enterprise numbers	PMI
A35	ADT^A35	Merge visit numbers	PMI
A36	ADT^A36	Merge MRNs	PMI
A38	ADT^A38	Cancel Pre-admit	ADT
A43	ADT^A43	Move MRN to Enterprise number	PMI
A45	ADT^A45	Move visit number	PMI
A51	ADT^A51	Move visit to another Patient	ADT

Table 1 Messages Supported by eHISC

4.2 Message combinations

Various PAS actions can result in multiple messages being emitted from the one business event. The PAS-related events are shown in the following table:

Description	Messages Sent
Register an inpatient	A28
Register and admit into Emergency Dept.	A28 + A01
Create an inpatient visit	A01 + A31
Discharge from Emergency Dept.	A03
Cancel discharge from Emergency Dept.	A13 + A02
Swap inpatient locations	A02 + A02
Merge Enterprise Numbers	[{A45}] + A36 + {A43} + A34

Table 2 Compound message sequences

4.3 Message Definitions

Below is a list of the message segments that may be included in the HL7 message. Some of these segments have not been standardised. Consult the source system documentation to determine the segment detail.

Please note:

- Those segments with an "R/O" value of "R" are always sent.
- The segments which are optional in HL7 and will NOT be sent have been deleted from the listing.
- Any application that interfaces to this profile must support the receipt of any valid HL7 segment that can be sent in the HL7 message. Receiving and ignoring segments that are not applicable to the application is the expected approach.
- Grey segments are accepted but ignored by eHISC.
- Any PD1 segments must be removed from a normal A01, A02, A03 and A05, otherwise the message will be treated as a pure demographic update.

4.3.1 ADT – A01 Admit

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
AL1	Allergies	O	Multiple
IN1	Insurance Information	O	Multiple

ZVI	Visit Information – Additional	O	1
ZPD	Person Details – Additional	O	1

4.3.2 ADT – A02/A12 Transfer/Cancel Transfer

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
ZVI	Visit Information – Additional	O	1
ZPD	Person Details – Additional	O	1

4.3.3 ADT – A03/A13 Discharge/Cancel Discharge

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
AL1	Allergies	O	Multiple
IN1	Insurance Information	O	Multiple
ZVI	Visit Information – Additional	O	1
ZPD	Person Details – Additional	O	1

4.3.4 ADT – A05 Pre-Admit

Note: Typically used to notify of addition to Waiting List for elective surgery, maternity etc.

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1	Patient visit information	R	1
PV2	Patient visit – Additional	O	1
AL1	Allergies	O	Multiple
IN1	Insurance Information	O	Multiple

Segment	Name	R/O	Freq. of Occurrence
ZVI	Visit Information – Additional	O	1
ZPD	Person Details – Additional	O	1

4.3.5 ADT – A11 Cancel Admit

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
IN1	Insurance Information	O	Multiple
ZVI	Visit Information – Additional	O	1

4.3.6 ADT – A08 Update Patient Information

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
AL1	Allergies	O	Multiple
DG1	Diagnosis Information	O	Multiple(1/Diagnosis)
DRG	Diagnoses Related Group Information	O	1
IN1	Insurance Information	O	Multiple
ZVI	Visit Information - Additional	O	1
ZPD	Person Details - Additional	O	1

4.3.7 ADT – A21/A22 Go for leave, Return from leave

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
ZVI	Visit Information - Additional	O	1

4.3.8 ADT – A16/A25 Pending/Cancel patient discharge

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
PV1	Patient Visit	R	1
PV2	Patient Visit – Additional	O	1
ZVI	Visit Information - Additional	O	1

4.3.9 ADT - A28/A31 Add/Update Patient information

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification	R	1
NK1	Next of Kin	O	Multiple
PV1 ⁴	Patient visit information	O*	1
AL1	Allergies	O	Multiple
	Insurance Information	O	Multiple
ZPD	Person Details - Additional	O	1

4.3.10 ADT – A34 Merge Enterprise IDs

eHISC will interpret this message to move all MRNs from one Enterprise ID (MRG-4) to another (PID-2), making the old Enterprise ID inactive.

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification (Merge-to person)	R	1
MRG	Merge Information	R	1

⁴ Removed in Corporate Standard, although a Required field in HL7 2.3.1 ADT_28/31

4.3.11 ADT – A35 PAS Merge Person Information – Visits

eHISC will interpret this message to merge one visit with another.

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification (Merge-to person)	R	1
MRG	Merge Information	R	1

4.3.12 ADT – A36 PAS Merge Person Information - MRNs

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification (Merge-to person)	R	1
MRG	Merge Information	R	1

4.3.13 ADT – A43 Move patient information - identifier list

This message moves a hospital MRN from one Enterprise ID to another.

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification (Merge-to person)	R	1
MRG	Merge Information	R	1

4.3.14 ADT – A45 Move visit information

eHISC will interpret this message to move a visit (MRG-5) from one MRN (MRG-1) to another (PID-3).

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
EVN	Event	R	1
PID	Patient Identification (Merge-to person)	R	1
MRG	Merge Information	R	1

4.3.15 ADT – A51 (Move visit to another patient)

eHISC will interpret this message to move a visit (PV1-18) from one MRN (MRG-4) to another (PID-3).

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1

EVN	Event	R	1
PID	Patient Identification	R	1
MRG	Merge Information	R	1
PV1	Patient Visit Information	O ⁵	1

4.3.16 ADT - ACK (Acknowledgment)

Segment	Name	R/O	Freq. of Occurrence
MSH	Message Header	R	1
MSA	Message Acknowledgment	R	1

4.4 Segment Definition Notes

The format for the standardised message segments is defined in the tables below.

Please note:

- Shaded fields are not used by eHISC.
- Literal values for specific fields are enclosed in quotes (e.g. "2.3.1").
- Those fields with an "R/O" value of "R" are always sent.
- Those fields with an "R/O" value "R*" or "O*" are a deviation from the HL7 2.3.1 standard with respect to optionality.
- Field lengths (for each repetition) are assumed to be as per HL7 2.3.1 standard unless otherwise noted in the 'Format/Ref/Notes' column.
- Please read section 5.4 regarding the use of the CE data type and non-standardised values prior to reading the segment definitions.

⁵ Variance to HL7 v2.3.1 which states this is a Required Segment.

4.5 Common Segment Definitions

4.5.1 MSH – Message Header

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref/Notes
1	00001	Field Separator	R		ST	" "
2	00002	Encoding Characters	R		ST	"^~\&"
3	00003	Sending Application	R*		HD	Enterprise Standard Table 'Application Codes' eHISC stores this in HL7MessageLog.SendingApplication
4	00004	Sending Facility	R*		HD	Enterprise Standard Table 'Facility Codes' eHISC stores this in HL7MessageLog.SendingFacility This value is not used to determine which hospital for the episode. Rather the assigning authority of the MRN (in PID-3) is used.
5	00005	Receiving Application	R*		HD	Enterprise Standard Table 'Application Codes'
6	00006	Receiving Facility	R*		HD	Enterprise Standard Table 'Facility Codes'
7	00007	Message date/time stamp	O		TS	Table 4 TS Data Type – Date set to 14 characters eHISC stores this in HL7MessageLog.DateTimeOfMessage
8	00008	Security	O		ST	Not Populated
9	00009	Message type	R		MSG	MessageType^Event type^messagestructure MessageType^Event type as defined in Message Type column of Table 1 Messages Supported. Message structure is optional. eHISC will use the message type to determine the Episode Lifecycle. See 2.1 Episode Lifecycle Mappings.
10	00010	Message Control ID	R		ST	eHISC will store this in HL7MessageLog.MessageControlId.
11	00011	Processing ID	R		ID	HL7 v2.3.1 Table 0103 ProcessID, "P", "D", "T"
12	00012	Version ID	R		VID	"2.3.1"
13	00013	Sequence Number	O		NM	Not populated
14	00014	Continuation Pointer	O			

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref/Notes
15	00015	Accept Acknowledge Type	O		ID	HL7 v2.3.1 Table 0155 "AL"
16	00016	Application Acknowledge Type	O		ID	HL7 v2.3.1 Table 0155 "NE"
17	00017	Country Code	O		ID	"AU"
18	00692	Character set	O		ID	HL7 v2.3.1 Table 0211 "ASCII"
19	00693	Principal language of msg	O		CE	"EN"
20	01317	Alternate Character Set Handling Scheme	O		ID	

4.5.2 MSA – Message Acknowledgment Segment

The response from the eHISC NotifyPasEvent method is a string containing an ACK message with MSH and MSA segments.

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref/Notes
1	00018	Acknowledgment Code	R		ID	HL7 v2.3.1 Table 0008 "AA" for success or "AE" for failure
2	00019	Message Control ID	R		ST	The message control ID of the incoming HL7 message.
3	00020	Text Message	O		ST	
4	00021	Expected Sequence Number	O		NM	
5	00022	Delayed ACK Type	O			
6	00023	Error condition	O		CE	<id>^<desc> eHISC error message is populated in the <desc> component

4.5.3 EVN – Event Type

eHISC database loader ignores the EVN segment, which can be left out.

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref.
1	00099	Event Type	R		ID	HL7 Event Column of Table 1 Messages Supported
2	00100	Recorded Date/Time	R		TS	Table 4 TS Data Type – Date set to 14 characters
3	00101	Date/Time Planned Event	O		TS	Table 4 TS Data Type
4	00102	Event Reason Code	O		IS	Not Yet Standardised. Refer to source system documentation
5	00103	Operator ID	O		XCN	
6	01278	Event occurred	O		TS	Only sent from source systems for A02, A21 and A22 Message Types

4.5.4 PID – Patient Identification Segment

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref/Notes
1	00104	Set ID – Patient ID	O		SI	Not used
2	00105	Patient ID (External ID)	O*		CX	<ID>^<CheckDigit>^<Check Digit Code>^<Assigning Authority>^<Code Type>^<Assigning Facility> eHISC looks in this field for the Enterprise ID.
3	00106	Patient Identifier List (Internal Id)	R	Y	CX	<ID>^<CheckDigit>^<Check Digit Code>^<Assigning Authority>^<Code Type>^<Assigning Facility> eHISC looks in this field for the patient's MRN at the facility for which this message is relevant. eHISC also looks for the DVA card number and Medicare card number in this field. Values as per Enterprise Standard Table 'PID List'.
4	00107	Alternate Patient ID	O		CX	not used.

Seq #	Item#	Name	R/O	RP/#	DT	Format/Ref/Notes																				
5	00108	Patient Name	R		XPN	Surname^GivenName^MiddleName^suffix^prefix^degree^NameTypeCode^NameRepresentationCode Name Type as per HL7 table 0200, but shall always be L (Legal) for PID-5. Name representation code as per HL7 table 4000. Note: This field has been defined with a length of 120 characters which is a deviation from the HL7 standard of 48 characters. eHISC will store a maximum 80 characters for each of Surname and GivenNames (formed by combining GivenName and MiddleName components). eHISC stores this name in PatientMasterName with NameTypeId 2 (Current Name in PAS), and keeps previous values by changing their NameTypeId to 3 (Previous/Other Names). The name that the IHI is obtained with is also stored into PatientMasterIhi fields RegisteredFamilyName and RegisteredGivenNames.																				
6	00109	Mothers Maiden Name	O		XPN																					
7	00110	Patient Date of Birth	R*		TS	Table 4 TS Data Type																				
8	00111	Patient Gender	R*		IS	Enterprise Standard Table 'Gender'. eHISC maps this to AS 5017-2006 Health Care Client Identifier Sex using the table below: <table><tr><th>Code</th><th>Description</th><th>SexId</th><th>Description</th></tr><tr><td>M</td><td>Male</td><td>1</td><td>Male</td></tr><tr><td>F</td><td>Female</td><td>2</td><td>Female</td></tr><tr><td>O</td><td>Other</td><td>3</td><td>Intersex or Indeterminate</td></tr><tr><td>U</td><td>Unknown</td><td>-1</td><td>Not Stated/Inadequately Described</td></tr></table> eHISC stores this in PatientMaster.CurrentSexId and uses the patient sex from this field for Medicare IHI searching. Where successful, then stored in PatientMasterIhi.RegisteredSexId. 6	00216	Prior Alternate Visit ID	O	N	CX	
7	00217	Prior Patient Name	O	N	XPN	

5. Data Type Definitions

This section details the specific implementation details for certain data types in use. Whenever the data type is referenced, the format here is followed. This section provides a more comprehensive view of the data types.

5.1 XTN Data Type

The XTN data type utilises the extended format as described in the following table. The following table describes the values in use when populated.

Field	Component Name	Data Sub Type	Format
1	Number	ST*	If supplied, should be same as component 7.
2	Use Code	ID	HL7 table 0201
3	Equipment Type	ID	HL7 table 0202
4	Email address	ST	
5	Country Code	ST*	International dialing country code
6	Area Code	ST*	area (STD) code
7	Phone Number	ST*	contains local portion of phone number, or full mobile (04xxxxxxx).
8	Extension	ST*	
9	Additional text	ST	

Table 3 XTN Data Type

* Variance to HL7 v2.3.1 which uses NM for these component types. Some systems may allow qualifiers to be supplied. e.g. 82231111(SIL) to denote number belongs to patient's Sister in Law.

Examples:

- email address: ^NET^Internet^zz@litlepond.net.au
- mobile number: 0414124124^PRN^CP^^^61^0414124124
- home phone: 83321234^PRN^PH^^^08^83321234

5.2 TS Data Type

The TS data type contains two components, as described in the following table. The precision component is optional.

Field	Component Name	Data Sub Type	Format
1	Time	ST	YYYY[MM[DD[hhmm[SS[.S[S[S[S]]]]]]]] [+/- ZZZZ]
2	Precision	ST	"YYYY[MM[DD[hhmm[SS[.S[S[S[S]]]]]]]] [+/- ZZZZ]" down to the level of precision. Eg: "YYYYMM" would indicate a precision down to the month.

Table 4 TS Data Type

5.3 XCN Data Type

The XCN data type utilises the format defined in the following table. The following table describes the values in use .when present.

Field	Component Name	Data Sub Type	Format
1	ID Number	ST	
2	Last Name	ST	
3	Given Name	ST	
4	Middle initial or name	ST	
5	Suffix	ST	
6	Prefix	ST	
7	Degree	IS	HL7 2.3.1 Table 360
8	Source Table	IS	This field has not been standardised
9	Assigning Authority	IS	This field has not been standardised
10	Name Type Code	ID	HL7 2.3.1 Table 200
11	Identifier Check Digit	ST	
12	Check Digit Scheme	ID	This field has not been standardised
13	Identifier Type Code		Table 6 Identifier Type Codes
14	Assigning Facility		Table 6 Identifier Type Codes

Table 5 XCN Data Type

The following table defines the standardised values for the Identifier Type code and the Assigning Facility. Non standardised values, including values where the Assigning facility is the site code, will be passed in this field, but have not been standardised.

Identifier Type Code	Assigning Facility	Description
PROVIDER	Sending Facility – As per Standard Enterprise Table 'Facility Codes'	HIC Provider ID. Note: Assigning facility shall be sent as the sending facility (rather than HIC) such that receiving systems can determine which site sent a given provider number.
PRESCRIBER	HIC	HIC Prescriber ID
INTERNAL	Sending Facility – As per Standard Enterprise Table 'Facility Codes'	The identifier used internally within the sending facility's system.

Table 6 Identifier Type Codes

5.4 CE Data Type

The CE data type is as per the HL7 2.3.1 specification. For elements that have been standardised the 'alternate' portion of the CE will generally contain the original source information. Non-standardised values from source systems are expected to be passed in CE fields, particularly in repeating fields and therefore validating the coding system is essential to utilising the standardised values.

The 'alternative' portion of the CE datatype where supplied is for internal reference only and as a general rule should be ignored by receiving systems. Where the alternative value is present it will contain the value prior to transformation to the Enterprise Standard value. This is of use to internal support personnel to debug missing or incorrect transformations.

If a lookup value could not be located by the Enterprise Standard Transformation, the ID component shall contain the code XXXX. Receiving systems should ignore fields containing code XXXX and not reject the message. Processes within the Enterprise Integration Engine shall create alerts to notify support that a message has been processed but a lookup value could not be identified.

5.5 PL Data type

The Person Location datatype is used in the patient visit segment PV1 to carry important information about the physical location of the patient - either the prior location or the assigned location. eHISC stores only the first three components as Ward, Room and Bed in the Episode table.

Field	Component Name	Data Sub Type	Format
1	Point of Care	IS	Ward Code
2	Room	IS	Room Number or Code.
3	Bed	IS	Bed Number or Code
4	Facility	HD	Not used by eHISC.
5	Location status	IS	Not used by eHISC
6	Person location type	IS	Not used by eHISC
7	Building	IS	Not used by eHISC
8	Floor	IS	Not used by eHISC
9	Location Description	ST	Not used by eHISC
