Appendix A eHISC Release 2.0.3 Architecture	33

1. Purpose

The purpose of this document is to provide an evaluation guide, so that Release 2.0.3 of the Healthcare Identifier and PCEHR¹ communications solution developed by NEHTA can be integrated with local systems.

Please read this document before commencing installation.

2. Testing

The software in this release has been through extensive testing and is now in production use in many locations across Australia. NEHTA CCA does require testing of some conformance requirements after integration with participating organisational systems.

For the purpose of software registration in the HI Service and PCEHR System any system connecting to these services **must be registered**. Thus, a unique product name and version number must be chosen to register the product.

For example, if the product name from organisation "RightWell Health" was chosen as "RightWell-eHISC" (*a fictional organisation and product name*) the following key strings would need to be registered:

- HI Service Vendor name is "RightWellHealth" and the PCEHR Vendor Name is "RightWellHealth".
- HI and PCEHR Service Product Name "RightWell-eHISC"
- HI and PCEHR Product Version "1.0"

Registration to both the test systems at Medicare and PCEHR must be completed before connectivity will be successful. This registration process will then have to be performed again for Production.

Test Description	Participating Organisational Testing Status
• HL7 PAS Unit Tests	Required by eHISC
• HL7 EMPI Unit Tests	Required by eHISC
• PCEHR Service Unit Tests	Required by eHISC
• System Integration Test	Recommended
• Performance and Load Test	Recommended
• Security Test	Recommended
• Healthcare Identifiers CCA Test	Required by eHISC
◦ IHI Search: UC.005, UC.010 and UC.015	• Required by eHISC

¹ **Disclaimer:** PCEHR means the My Health Record, formally the "Personally Controlled Electronic Health Record", within the meaning of the *My Health Records Act 2012* (Cth), formerly called the *Personally Controlled Electronic Health Records Act 2012* (Cth).

3. Evaluation Prerequisites

This section outlines the major prerequisites that participating organisations will need to obtain for successful evaluation, integration and CCA testing of eHISC.

Registration and contact assistance for Software Vendors can be found at Online Technical Support (OTS) help desk from the DHS at

<http://www.medicareaustralia.gov.au/provider/vendors/helpdesk.jsp>

A summary of the contact details for OTS is defined in the following document and it is the OTS Liaison that can help direct your queries if you are unsure who should be contacted. <http://www.medicareaustralia.gov.au/provider/vendors/files/software-vendors2.pdf>

3.1 Registration to HI Service Vendor Environment

DHS issues a pack of test Medicare Australia Site Certificates that are to be used for access to the HI Service Vendor Environment. Each organisation may request a pack from DHS and request the OTS Liaison to allow eHISC access using a certificate in their pack.

The eHISC compiled binaries, registered as a product, needs to provide the following details to be able to identify itself to the HI Service:

Field	Description	Application Config Setting
Vendor ID	The registered product Vendor ID	IhiVendorId
Product Name	The registered Product Name	IhiProductName
Product Version	The registered product version number	IhiProductVersion

(Note: eHISC compiled binaries will require specific registration to the HI Service.)

3.2 Registration to PCEHR SVT Environment

DHS issues a pack of NASH-compliant HPI-O Test Certificates that are to be used by an organisation for their integration and CCA testing. Each organisation may request a pack from DHS and request the National Infrastructure Operator (NIO) to configure the PCEHR SVT Environment to allow eHISC access using the certificates in their pack. Additionally, if local identifiers for document authors are to be used in a CDA document then permissions are required from the NIO to allow access to the restricted templates for uploading documents with a local ID in place of an HPI-I to identify the author.

The eHISC compiled binaries, registered as a product, needs to provide the following details to be able to identify this version of the product to the PCEHR system:

Field	Description	Application Config Setting
Vendor	The registered Product Vendor Name	PcehrVendorId
Product Name	The registered Product Name	PcehrProductName
Product Version	The registered product version number	PcehrProductVersion

(Note: eHISC compiled binaries will require specific registration to the PCEHR System.)

4. eHISC Demo Harness

4.1 Overview

The eHISC Demo Harness can be used to demonstrate and test a subset of eHISC functionality.

The demo harness connects to the eHISC application server using the HTTP web service bindings of the following services:

- Database Loader Service – to submit HL7 messages from PAS for patient registration, updating patient demographics, admit, transfer and discharge events.
- IHI Service – to retrieve the validated IHI information for a patient record, for use in a clinical document to be uploaded to PCEHR.
- Consent Service – to withdraw consent to upload documents for an episode of care, disclose existence of a PCEHR, or query patient participation status.
- PCEHR Service – to check whether a PCEHR is advertised, upload or supersede, remove, gain access, get document list, retrieve, and get change history.

The demonstration application also makes a direct connection to the PCEHR Data Store database, to show available patients and episodes, to show the information that is stored as a result of the IHI search and the audit records that are created.

4.2 Limitations

The demo harness does not expose all features and operating modes of the eHISC application server.

The demo harness operates with the following limitations:

- Test patients must be registered and admitted via HL7 messages.
- The demonstration HL7 messages have SA Health specific hospital codes (e.g. RAH or FMC) that must be changed to match the hospital codes you have configured for eHISC.
- Each IHI must be obtained from the HI Service Vendor Environment using the Medicare Number or DVA number, so test patients for which the Medicare or DVA number is unknown cannot be used.
- eHISC services are invoked using MRN identifier, not using State Patient ID or Validated IHI.
- Some eHISC services are not exposed in the demo harness (in particular: Get Operation Status, Reload Reference Data, Get Hospital Details, Check Consent and Check Disclosure, Assisted Registration, Prescription and Dispense View, HPI-I Search).

In order to evaluate the usage of eHISC with the Validated IHI parameter, an alternative web service testing tool, such as soap-UI, is required: See Section 6 for details.

4.3 eHISC Demo Harness Configuration

The files for the eHISC Demo Harness can be found in folder "Demo Harness Application".

eHISC Demo Harness configuration options are held in the file "HIPS.DemoHarness.exe.config". At a minimum, the highlighted items must be replaced with applicable values for the installation.

4.4 SQL Connection Strings

Name	Changes Required
PcehrDataStoreConnectionString	<p>Change the value after "Data Source" to the database server name</p> <p>Change the value after "Initial Catalog" to the database name</p> <p>If it is necessary to use SQL Server Authentication instead of Windows Authentication, change "Integrated Security" to false and add "User ID" and "Password" items.</p>
HIPS.DemoHarness.Properties.Settings.HL7DatabaseConnectionString	No Changes Required.
HIPS.DemoHarness.Properties.Settings.PcehrDataStoreConnectionString	Apply the same changes to this connection string as were applied in the first connection string.

4.5 Endpoint Addresses

Six endpoints must be configured for each eHISC environment, being the Database Loader Service, IHI Service, PCEHR Service, PCEHR Service V2, CDA service and Consent Service.

Multiple endpoints are configurable, using an underscore to separate the environment from the service. For example, the name "Development_DatabaseLoaderService" refers to the database loader service for the Development environment, while the name "SystemTest_ConsentService" refers to the consent service for the System Test environment.

Replace hostname, port and ENV with the eHISC application server name, HTTP port and the environment identifier (DEV / SYSTEST / PREPROD / PROD) for each of the endpoints in the demo harness configuration file.

Section	Suggested Value	Description
Endpoints named Database Loader Service	http://hostname:port/HIPSServer_ENV/HIPS.Service.DatabaseLoaderService.svc/HIPS.Service.DatabaseLoaderService	The test harness will connect to the eHISC Database Loader Service using the web service at this URL
Endpoints named IHI Service	http://hostname:port/HIPSServer_ENV/HIPS.Service.IHISvc.svc/HIPS.Service.IHISvc	The demo harness will connect to the eHISC IHI Service using the web service at this URL

Section	Suggested Value	Description
Endpoints named PCEHR Service	http://hostname:port/HIPSServer_E NV/HIPS.Service.PCEHRService.svc/H IPS.Service.PCEHRService	The demo harness will connect to the eHISC PCEHR Service using the web service at this URL
Endpoints named PCEHR Service V2	http://hostname:port/HIPSServer_E NV/HIPS.Service.PCEHRService.svc/H IPS.Service.PCEHRServiceV2	The demo harness will connect to the eHISC PCEHR Service V2 using the web service at this URL
Endpoints named CDA Service	http://hostname:port/HIPSServer_E NV/HIPS.Service.CdaService.svc/HIP S.Service.CdaService	The demo harness will connect to the eHISC CDA Service using the web service at this URL
Endpoints named Consent Service	http://hostname:port/HIPSServer_E NV/HIPS.Service.ConsentService.svc/ HIPS.Service.ConsentService	The demo harness will connect to the eHISC Consent Service using the web service at this URL

4.6 Use of Demo Harness

4.6.1 Authentication Tab

Upon starting the demo harness it will show the Authentication tab. The Authentication tab can be used to select which of the environments in the configuration file will be used for the web service calls to eHISC, and to select which user role and details to assert to eHISC.

Figure 2 – Choose test PAS message from list or copy from another source

The Register or Update Patient tab of the demo harness can be used to submit HL7 messages to the Database Loader Service to register patients and demonstrate the automatic IHI lookup and PCEHR advertised check.

Participating Organisations evaluating eHISC should use this tab to register a patient whose demographics match a test patient from their PCEHR Vendor Pack, and admit the patient to create an episode.

This can be achieved by replacing the highlighted portions of the following message as indicated. Dates should be entered as yyyyMMddHHmmss, for example 20121231001122 for 12:11:22am on 31/12/2012.

The hospital code **LMH** must be replaced with a hospital code that is configured for a hospital in the eHISC database.

```

4.6.2.1 Workaround if IHI Search Not Possible

If the information supplied for the patient does not include a Medicare card number or DVA file number, then eHISC will be unable to automatically obtain the IHI of the patient. In this case it is possible to work around by inserting a row into PatientMasterIhi with the required IHI. If the date last validated is more than the configured period (e.g. 24 hours) in the past, eHISC will validate the IHI before using it in any call to the PCEHR system.

This can be achieved by replacing the highlighted items in the following SQL command. The first is the primary key value of the newly created item in the PatientMaster table.

```
INSERT INTO hips.PatientMasterIhi (PatientMasterId, Ihi, IhiStatusId, IhiRecordStatusId,  
RegisteredGivenName, RegisteredFamilyName, RegisteredSexId, DateLastValidated, DateCreated,  
UserCreated, DateModified, UserModified) VALUES (n, '800360nnnnnnnnnn', 1, 1, 'Given Names', 'Family  
Name', 1, '2012-11-01', GETDATE(), 'TestUser', GETDATE(), 'TestUser')
```

4.6.3 Check for PCEHR Tab

Authentication | Register or Update Patient | **Check for PCEHR** | Record Consent | Upload or Supersede Doc | Remove Doc | Gain Access | List Docs | Download Doc | Change History | PCEHR View | Upload PDF

Patient: BELL, MABEL

Required Data for Web Service Call

Hospital Code System: pasFacCd
 Hospital Code: RKH
 Medical Record Number: TEST-SAH_7
 Date of Birth: 21/08/1957

Get Validated IHI

Service Return Status: OK

IHI: 8003608166708487
 IHI Status: Active
 IHI Record Status: Verified
 Last Validated Date/Time: 20/06/2014 12:29

Given Names: MABEL
 Family Name: BELL
 Sex: Female

Check PCEHR Status

Service Return Status: OK

Advertised Status: Yes, an advertised PCEHR exists.

Access Status: Your organisation has already gained access to this PCEHR.

Status: OK

Figure 3 – After registering a patient, the patient may be selected from the database

The Check for PCEHR tab demonstrates the services that allow clinical systems to:

- **Get Validated IHI:** Retrieve a validated IHI for a patient, such as for use in a clinical document. The IHI retrieval will be immediate if it has been less than 24 hours (or the configured period) since the IHI was obtained or last validated.
- **Check PCEHR Status:** Check the PCEHR existence / access status for a patient at the healthcare provider organisation of a hospital.

The services demonstrated on this page and subsequent pages can accept any of the supported types of patient identifier, but only the MRN type is demonstrated in this application. The supported types are:

- Medical Record Number (MRN) allocated by the hospital,
- State/Territory Patient Identifier allocated by the Enterprise Master Patient Index (EMPI),
- Validated Individual Healthcare Identifier (IHI) including validation information, and
- Patient Master ID, being the internal primary key in the SQL database used by eHISC.

4.6.4 Consent and Participation Tab

Required Data for Record Consent Web Service Call

Hospital Code System: pasFacCd

Hospital Code: RCH

Medical Record Number: TEST-CIS-85

Admission Date: 12/11/2013 10:20:30

Consent Withdrawn: false

Required Data for List Recent Participation Web Service Call

Hospital Code System: pasFacCd

Since Date: 18/06/2014 12:29:44

Required Data for Check Patient Participation Web Service Call

Hospital Code System: pasFacCd

Hospital Code: RCH

Medical Record Number: TEST-CIS-85

HospitalCode	Mm	ParticipationStatus	StatePatientId	ValidatedIhi
RKH	TEST-SAH_7	PcehrAdvertised		IHI 80036081667...
RCH	TEST-CCA_13	PcehrAdvertised		IHI 80036034567...

Figure 4 - Choose a patient and episode to record consent, or just a patient to disclose PCEHR

The Consent page demonstrates the services that allow clinical systems to:

- **Record Upload Consent:** Record when a patient withdraws their consent to upload clinical documents for a particular episode of care, or reinstate this consent, or check the consent status for an episode.
- **Record PCEHR Disclosure:** Record when a patient who has chosen to hide the existence of his/her PCEHR nonetheless discloses the existence to a healthcare provider organisation and expects that documents should be uploaded, or rescinds this disclosure.
- **List Recent Patient Participation:** Query for a list of all patients who have changed participation status since a given point in time.
- **Check Single Patient Participation:** Query for a particular patient whether that patient is participating in PCEHR (either having an advertised PCEHR or having disclosed its existence to the organisation).

For the Record Upload Consent service, the Episode must be identified. For the operating mode using the MRN parameter, eHISC identifies the Episode using the admission date/time.

4.6.5 Upload or Supersede Document Tab

Figure 5 - Choose a patient and episode, select a CDA document and click 'Upload or Supersede'.

This tab demonstrates the service that allows a clinical system to submit a CDA document (XML and attachments) to be uploaded to the PCEHR. Key points from the business logic are demonstrated here:

- eHISC will sign the CDA document using the eHealth Record certificate of the healthcare provider organisation to which the discharging hospital belongs, and package the supplied document (as CDA_ROOT.XML), generated signature (as CDA_SIGN.XML) and any other supplied attachments, together with the logo for the hospital (as LOGO.PNG).
- If the patient has withdrawn consent to upload documents for the specified episode, then eHISC will refuse to queue the document for uploading.
- If eHISC has already uploaded a document instance for the same episode, with the same Set ID, then this version will supersede the previous version uploaded.
- If the document set had been removed from the PCEHR, then the upload of a new version in the set will cause all previous versions to become visible again.

For the Upload or Supersede Document service, the Episode must be identified. For the operating mode using the MRN parameter, eHISC identifies the Episode using the admission date/time. Note that the Validated IHI parameter (not usable in the demo harness) will create Episode stubs that are identified using the document set ID.

4.6.6 Remove Document Tab

Authentication | Register or Update Patient | Check for PCEHR | Record Consent | Upload or Supersede Doc | Remove Doc | Gain Access | List Docs | Download Doc | Change History | PCEHR View | Upload PDF

Figure 6 - Choose a patient, episode and previously uploaded document to remove.

This tab demonstrates the service that allows a clinical system to 'remove' a document set that eHISC previously uploaded to the PCEHR. When removed, a document set remains visible to the authoring healthcare provider organisation but becomes invisible to the consumer and other healthcare provider organisations. It can be reinstated by uploading a new version of the document. One of two acceptable reasons for removal must be supplied (withdrawn by provider or incorrect identity).

4.6.7 Gain Access Tab

Figure 7 - Choose a patient, check for PCEHR existence and gain access to the PCEHR.

This tab demonstrates the services that allow a clinical system to:

- **Check for PCEHR Status:** Determine whether the health provider organisation has already gained access to the PCEHR for the selected patient, or if not, whether a code is required to gain access.
- **Gain Access with Code:** Gain access to a PCEHR by supplying an access code. If the patient gives his/her Record Access Code (RAC) then general access will be granted for 3 years. If the patient gives his/her Limited Document Access Code (LDAC) then restricted access will be granted, giving access to both general documents and restricted documents for 3 years.
- **Gain Access without Code:** Gain access to a PCEHR without supplying an access code, thus gaining general access for 3 years.
- **Gain Emergency Access:** Gain emergency access to a PCEHR, giving access to both general and restricted documents for 5 days.

Status:OK

Figure 8 - Choose a patient and filter the list by document status and optionally by date range.

This page demonstrates the services that allow a clinical system to retrieve the metadata of clinical documents available to download from a patient's PCEHR.

In order to download one of the documents in this tab, click the button in the Download column. This will copy the document Unique ID and Repository ID to the appropriate places in the Download Doc tab.

In order to retrieve the list of all versions of one of the documents, click the button in the History column. This will copy the document Unique ID to the appropriate place in the Change History tab.

NOTE: NOC requirements state that the Change History service must be invoked using the Document Entry UUID as the parameter, not the Document Unique ID. Although the demo harness still works using the Document Unique ID, be sure to use the Entry UUID when integrating eHISC with your clinical system.

4.6.9 Download Document Tab

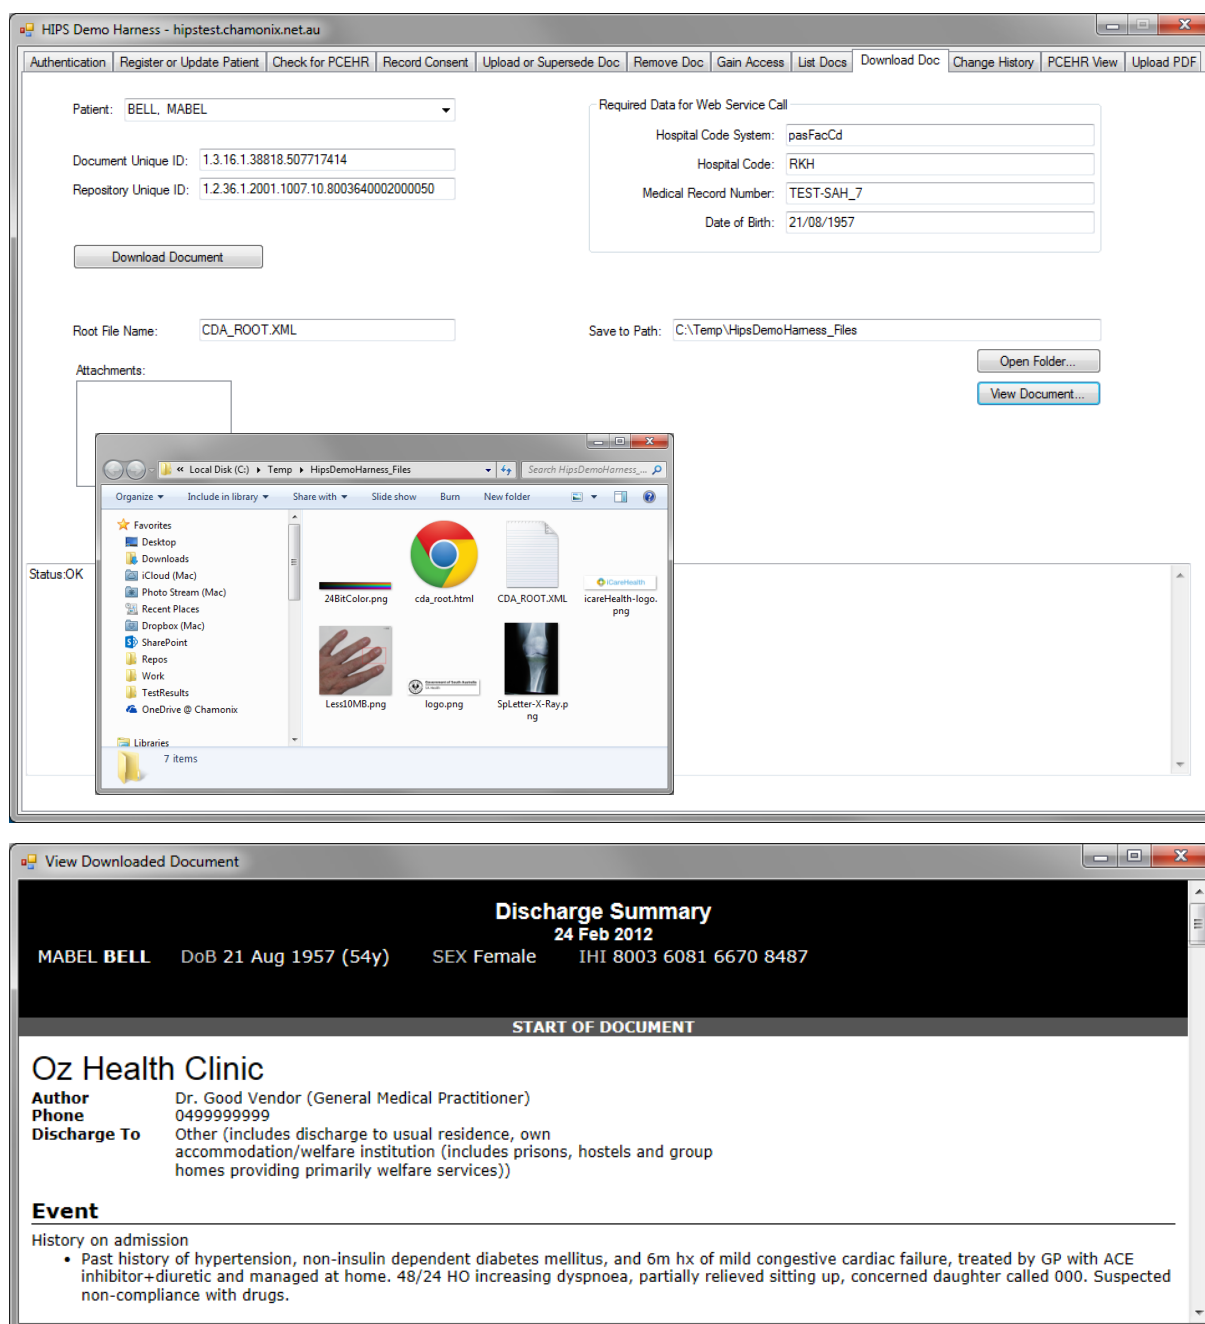

Figure 9 - Choose a patient and enter the Unique ID and Repository ID of a document to download.

This page demonstrates the service that allows a clinical system to download a clinical document using the Unique ID and Repository ID that appear in the list. The CDA document and any attachments will be saved into the local file system at the path specified.

4.6.10 Change History Tab

Authentication | Register or Update Patient | Check for PCEHR | Record Consent | Upload or Supersede Doc | Remove Doc | Gain Access | List Docs | Download Doc | Change History | PCEHR View | Upload PDF

Figure 11 - Choose a patient and show the embedded PCEHR viewer.

This page demonstrates the Patient Landing Page feature of WP7 eHISC UI Enhancements that allows a clinical system to embed the eHISC PCEHR Web Viewer as a component of an existing clinical application.

4.6.12 Upload PDF Tab

The screenshot shows a web application window titled "HIPS Demo Harness - hipstest.chamonix.net.au". The interface has a top navigation bar with tabs: Authentication, Register or Update Patient, Check for PCEHR, Record Consent, Upload or Supersede Doc, Remove Doc, Gain Access, List Docs, Download Doc, Change History, PCEHR View, and Upload PDF. The "Upload PDF" tab is active. The form is divided into several sections: Patient (BELL, MABEL), Encounter Period (Admission Date/Time: 12 / 11 / 2013 10 : 20, Discharge Date/Time: 20 / 06 / 2014 12 : 41), Document Author (Family Name: Windsor, Given Name: Mary, Title: Princess, Suffix: of Scots, Identifier: maryofscots, Type: Local Identifier), Discharge Summary (Select PDF: DischargeSummary.pdf (4465401 bytes), Document Status: Final, Creation Date/Time: 19 / 06 / 2014 12 : 41, Clinical Specialty: Oncology, Mode of Separation: Self Discharge), Attachments (logo.png, asthma_fact_sheet_en.pdf), and a Status section (Status: OK, Document ID: 1.2.36.1.2001.1005.49.1.8003621566687292.29^29, Document Set ID: 1.2.36.1.2001.1005.49.2.8003621566687292^2). A button "Upload or Supersede" is located at the bottom left of the form.

Figure 12 – Generate and upload a CDA Level 1A Discharge Summary with PDF body.

This page demonstrates the web service "Upload Discharge Summary Level 1A" that allows a clinical system to provide a PDF document and minimal metadata to allow that document to be uploaded to the PCEHR system.

5. Invoke eHISC services with soapUI

SoapUI is an open source, cross-platform application for testing web services. The latest 32 or 64 bit Windows releases can be downloaded from:

- <http://sourceforge.net/projects/soapui/files/soapui/4.6.4/SoapUI-x32-4.6.4.exe/download> (32)
- <http://sourceforge.net/projects/soapui/files/soapui/4.6.4/SoapUI-x64-4.6.4.exe/download> (64)

Open SoapUI, create a new soapUI project, and copy the URL of the WSDL into the "Initial WSDL/WADL" box.

For PCEHR services (e.g. IsPcehrAdvertised or UploadOrSupersedeDocument) use:

- http://hostname:50500/HIPSServer_DEV/HIPS.Service.PCEHRService.svc?wsdl

For IHI services (e.g. GetValidatedIhi) use:

- http://hostname:50500/HIPSServer_DEV/HIPS.Service.IHIService.svc?wsdl

For Consent services (e.g. RecordDisclosure, RecordConsent or GetPatientParticipationStatus) use:

- http://hostname:50500/HIPSServer_DEV/HIPS.Service.ConsentService.svc?wsdl

For HL7 Interface services (e.g. NotifyPasEvent) use:

- http://hostname:50500/HIPSServer_DEV/HIPS.Service.DatabaseLoaderService.svc?wsdl

5.1 Adding WS-Addressing Header

All of the eHISC services require a "wsa:To" header. The checkbox "Add default wsa:To" must be turned on in the "WS-A" tab at the bottom of the soapUI request window for each request that you create, otherwise an exception will be returned.

5.2 Specialising the Patient Identifier Base

Most of the eHISC services take a patientIdentifier parameter which is declared as the abstract base class PatientIdentifierBase, with specialisations of Mrn, StatePatientId, PatientMasterId or ValidatedIhi.

SoapUI assumes that you will pass in the declared type for all parameters, so you will need to manually modify the request to specify a subclass of PatientIdentifierBase and provide values for all the properties in the subclass.

For services that take a patientIdentifier parameter, you will need to specialise the class by adding a namespace declaration for XML Schema Instance:

```
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
```

Then specify the type of patient identifier using an xsi:type attribute on the patientIdentifier:

```
xsi:type="hips:ValidatedIhi"
```

Then add the remaining properties in the order declared in the XSD for the PatientIdentifier namespace, which can be retrieved from:

- http://hostname:57500/HIPSServer_DEV/HIPS.Service.PCEHRService.svc?xsd=xsd2

5.3 Example Call to IsPcehrAdvertised

If you already know the IHI for the patient and just want to check whether the patient has an advertised PCEHR, you can call IsPcehrAdvertised with a patient identifier of type "hips:ValidatedIhi". This is illustrated below for the test patient Augustus Heller with IHI 8003 6080 0001 2245.

5.3.1 Request

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS/Services/2012/01"
  xmlns:hips="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas.PatientIdentifier"
  xmlns:hips1="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <soap:Header/>
  <soap:Body>
    <ns:IsPcehrAdvertised>
      <ns:patientIdentifier xsi:type="hips:ValidatedIhi">
        <hips:HospitalCode>FMC</hips:HospitalCode>
        <hips:HospitalCodeSystem>pasFacCd</hips:HospitalCodeSystem>
        <hips:DateOfBirth>1996-02-28</hips:DateOfBirth>
        <hips:FamilyName>Heller</hips:FamilyName>
        <hips:GivenName>Augustus</hips:GivenName>
        <hips:Ihi>8003608000012245</hips:Ihi>
        <hips:IhiLastValidated>2013-04-02T01:00:00Z</hips:IhiLastValidated>
        <hips:IhiRecordStatus>Verified</hips:IhiRecordStatus>
        <hips:IhiStatus>Active</hips:IhiStatus>
        <hips:Sex>Male</hips:Sex>
      </ns:patientIdentifier>
      <ns:dateOfBirth>1996-02-28</ns:dateOfBirth>
      <ns:user>
        <hips1:Domain>DOMAIN</hips1:Domain>
        <hips1:Login>ssmith</hips1:Login>
        <hips1:Name>Simon Smith</hips1:Name>
        <hips1:Role>InteractiveUser</hips1:Role>
      </ns:user>
    </ns:IsPcehrAdvertised>
  </soap:Body>
</soap:Envelope>
```

5.3.2 Response

In this response, the value "WithCode" indicates that the patient has an advertised PCEHR to which the organisation has not gained access, and that a Record Access Code will be required to gain access. However, keep in mind that you can upload documents to this PCEHR without needing to gain access first.

```
<s:Envelope
  xmlns:s="http://www.w3.org/2003/05/soap-envelope"
  xmlns:a="http://www.w3.org/2005/08/addressing">
  <s:Header>
    <a:Action s:mustUnderstand="1">
      http://schemas.HIPS/Services/2012/01/IPCEHRService/IsPcehrAdvertisedResponse
    </a:Action>
  </s:Header>
  <s:Body>
    <IsPcehrAdvertisedResponse
      xmlns="http://schemas.HIPS/Services/2012/01">
      <IsPcehrAdvertisedResult
        xmlns:b="http://schemas.datacontract.org/2004/07/HIPS.PcehrSchemas"
        xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
        <b:AccessCodeRequired>WithCode</b:AccessCodeRequired>
        <b:HipsResponse
          xmlns:c="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas">
          <c:HipsErrorMessage i:nil="true"/>
          <c:ResponseCode i:nil="true"/>
          <c:ResponseCodeDescription i:nil="true"/>
          <c:ResponseCodeDetails i:nil="true"/>
          <c>Status>OK</c>Status>
        </b:HipsResponse>
        <b:PcehrExists>true</b:PcehrExists>
      </IsPcehrAdvertisedResult>
    </IsPcehrAdvertisedResponse>
  </s:Body>
</s:Envelope>
```

5.4 Example Call to NotifyPasEvent

If you have a patient with a Medicare Card Number or DVA File Number, and want eHISC to use those to search for the IHI, you can call NotifyPasEvent with an HL7 message in the format below, then call GetValidatedIhi to retrieve the IHI.

The key information that should be changed for each message is highlighted in yellow, being:

- The sending facility (**FMC**) and message control ID (**4200018**) for identification of this message.
- The state/territory patient identifier (**12345**), identified with the code "SAUHI".
- The MRN (**TEST-CCA_13**), identified with the code "MR".
- The assigning hospital for the MRN (**FMC**), as configured in HospitalCode.Code where CodeSystem.Code is "pasFacCd". This determines which HPI-O / certificate is used to connect to Medicare HI Service and PCEHR B2B Gateway.
- The Medicare card number with or without IRN (**59500730912**), identified by "MC".
- The DVA file number (**N394932**), identified by "DVA".

- The family name (**DUNCAN**)
- The given name (**ALEXANDER**)
- The date of birth (**20090505**) in YYYYMMDD format
- The sex code (**M**) being one of M – Male, F – Female, O – Other or U – Unknown. These are mapped to M – Male, F – Female, I – Intersex or Indeterminate and N – Not Specified respectively.

Of these, the state/territory patient identifier, Medicare and DVA are optional, however at least one of Medicare or DVA must be provided if an IHI search is to be performed.

5.4.1 Request

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS/Services/2012/01"
  xmlns:hips="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas">
  <soap:Header/>
  <soap:Body>
    <ns:NotifyPasEvent>
      <ns:messageForm><![CDATA[MSH|^~\&|PMI|FMC|HIPS|NEHTA|20130402070340|J4VX|ADT^A28|4200018|P|2.3.1|||AL|NE|AU|

        MSA|AA|4200016
      </NotifyPasEventResult>
    </NotifyPasEventResponse>
  </s:Body>
</s:Envelope>
```

5.5 Example Call to GetValidatedIhi

After registering the patient using NotifyPasEvent, you can retrieve the IHI for use in a clinical document using the service GetValidatedIhi. Here, the patient identifier has type "hips:Mrn" with value "TEST-CCA_13" which matches the MRN in the HL7 message. The date of birth is a mandatory parameter to increase the chance that the intended patient record is matched.

5.5.1 Request

```
<soap:Envelope
  xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS/Services/2012/01"

5.6 Example Call to UploadOrSupersedeDocument

In this example, a CDA document is provided to eHISC for packaging and uploading to PCEHR. The full CDA document, encoded as Base64, must be provided – it has been omitted for space reasons here.

In Soap-UI a CDA document may be inserted by right-clicking at the appropriate spot and selecting "Insert File as Base-64".

5.6.1 Request

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS.Services/2012/01"
  xmlns:hips="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas.PatientIdentifier"
  xmlns:hips1="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas"

5.6.2 Response

The following response with status "OK" indicates that the request was successfully placed on the queue to be processed later. You can call `GetOperationStatus` to determine whether the document was uploaded.

```

<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
xmlns:a="http://www.w3.org/2005/08/addressing">
    <s:Header>
        <a:Action s:mustUnderstand="1">
http://schemas.HIPS/Services/2012/01/IPCEHRService/UploadOrSupersedeDocumentResponse</a:Action>
        </s:Header>
    <s:Body>
        <UploadOrSupersedeDocumentResponse xmlns="http://schemas.HIPS/Services/2012/01">
            <UploadOrSupersedeDocumentResult
                xmlns:b="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas"
                xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
                <b:HipsErrorMessage i:nil="true"/>
                <b:ResponseCode i:nil="true"/>
                <b:ResponseCodeDescription i:nil="true"/>
                <b:ResponseCodeDetails i:nil="true"/>
                <b>Status>OK</b>Status>
            </UploadOrSupersedeDocumentResult>
        </UploadOrSupersedeDocumentResponse>
    </s:Body>
</s:Envelope>

```

5.7 Example Call to GetOperationStatus

This service allows a calling system to query all the pending or failed queued operations (upload or remove), and any uploaded documents for a specified patient and episode.

5.7.1 Request

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:ns="http://schemas.HIPS/Services/2012/01"
  xmlns:hips="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas.PatientIdentifier"
  xmlns:hips1="http://schemas.datacontract.org/2004/07/HIPS.CommonSchemas"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <soap:Header/>
  <soap:Body>
    <ns:GetOperationStatus>
      <ns:patientIdentifier xsi:type="hips:ValidatedIhi">
        <hips:HospitalCode>FMC</hips:HospitalCode>
        <hips:HospitalCodeSystem>pasFacCd</hips:HospitalCodeSystem>
        <hips:DateOfBirth type="xs:dateTime">1977-01-01</hips:DateOfBirth>
        <hips:FamilyName>BERMAN</hips:FamilyName>
        <hips:GivenName>JAKE</hips:GivenName>
        <hips:Ihi>800360800002519</hips:Ihi>
        <hips:IhiLastValidated type="xs:dateTime">2013-04-03</hips:IhiLastValidated>
        <hips:IhiRecordStatus>Verified</hips:IhiRecordStatus>
        <hips:IhiStatus>Active</hips:IhiStatus>
        <hips:Sex>Male</hips:Sex>
      </ns:patientIdentifier>
      <ns:admissionDate>2013-04-02T16:01:00</ns:admissionDate>
      <ns:user>
        <hips1:Domain>DOMAIN</hips1:Domain>
        <hips1:Login>ssmith</hips1:Login>
        <hips1:Name>Simon Smith</hips1:Name>
        <hips1:Role>Interactiveuser</hips1:Role>
      </ns:user>
    </ns:GetOperationStatus>
  </soap:Body>
</soap:Envelope>
```

5.7.2 Response

In this response, the number of QueuedOperations is zero, so the operation must have been successful and removed from the queue. There is one UploadedDocument and one UploadedDocumentVersion. The full package is also included in the response, which has been abbreviated here.

```
<s:Envelope xmlns:s="http://www.w3.org/2003/05/soap-envelope"
