

NEHTA-Managed Specification Release 09 December 2011

Template Service Release Notification Version 1.0

Introduction

This release notification introduces interface specifications associated with the national Template Service. This interface supports interaction between Clinical Information Systems, Contracted Service Providers and Conformant Repositories with the Template Service.

This release consists of the specifications as listed below:

- Template Service Interface Logical Service Specification v1.0

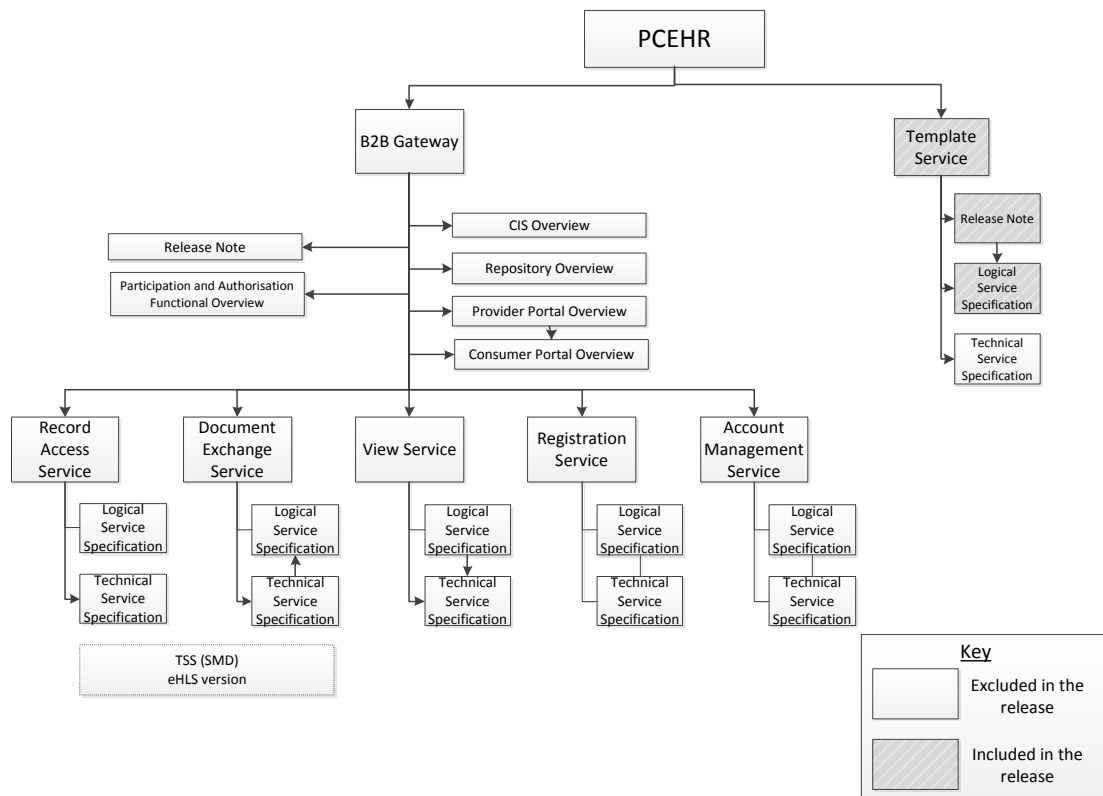

The role of this release is to provide a specification to facilitate interaction with the Template Service. The included specifications may be used to support interactions between external systems and the Template Service.

Scope

The purpose of this release is to provide a set of specifications to facilitate interaction with the Template Service. The included specifications may be used to support interactions between external systems and the Template Service.

The package provides Logical Service Specifications (LSS). The Technical Service Specifications (TSS) related to these Logical Service Specifications will be released separately

Solution Bundle

Change Management

All Template Service specifications are developed as part of the PCEHR work program. As such, variations resulting from the further delivery of PCEHR specifications will be managed through the PCEHR release management and change control process.

Feedback on this release can be emailed to nehtasupport@nehta.gov.au as can any questions relating to this package.
