

## SNOMED CT-AU – Common v1.6

# Release Note

31 January 2016

Approved for external information

## Summary

### **EP-2226:2016 SNOMED CT-AU – Common v1.6**

This end product contains product components that are relevant across SNOMED CT®-AU<sup>1</sup> releases.

### **Release rationale**

This release includes:

- The *NCTIS Reference Set Library v2.1*, which lists all available reference sets produced by the National Clinical Terminology and Information Service (NCTIS), as well as reference sets provided by licence holders or other relevant bodies that may be useful for implementation and use in Australia.

This version adds the following reference sets:

- *Calendar day and month reference set*
- *Dose based prescribing medication course type reference set*
- *Unit of time reference set*
- The *NCTIS Development Approach for Reference Sets v2.1*, which describes the development approach used in creating reference sets for use by the NCTIS community of practice.

This version adds information on language reference sets (Section 2.4.8, Section 9), as well as the three new reference sets mentioned above.

Additional collateral for use that is common to both SNOMED CT-AU and the Australian Medicines Terminology (AMT) can be found at [Australian Medicines Terminology v3 Model - Common](#)<sup>2</sup> on the NEHTA website. This includes:

- *Australian Medicines Terminology v3 Model - Technical Implementation Guide*, which specifies the AMT data model, giving special attention to how the concepts, relationships and descriptions are structured. It provides implementation guidance to software developers and technical consumers that should assist in the implementation of AMT v3 for common use cases.
- *Clinical Terminology – Guidance for Use of Medical Nomenclatures in Information Exchange*, which provides guidance for healthcare software systems that produce and consume clinical messages containing medical nomenclatures. This guidance also

<sup>2</sup> <http://www.nehta.gov.au/implementation-resources/ehealth-foundations/australian-medicines-terminology-common>

helps software developers to manage risks when developing systems using medical nomenclatures.

- *Clinical Terminology - Guidance for People and Processes*, which provides guidance for those involved in adopting the AMT or SNOMED CT-AU. This guidance may be used to minimise clinical safety risks and maximise the benefits associated with using the AMT or SNOMED CT-AU.
- *Clinical Terminology - Guidance for Use in Healthcare Software*, which provides guidance for managing risks when implementing the AMT or SNOMED CT-AU in healthcare software. This guidance complements the software requirements provided by other eHealth specifications.
- *Clinical Terminology - Test Cases for Software and Messaging*, contains test cases and information to check whether healthcare software systems that support the use of the AMT or SNOMED CT-AU (or both) meet the relevant terminology software requirements. Further supplementary information is also included. The terminology software requirements are described in the clinical terminology guidance documents.

## Audience

The audience for this end product includes anyone with a practical interest in SNOMED CT-AU, including:

- Business:* Business owners, product managers, project managers, policy makers.
- Clinical:* Healthcare professionals and other end users.
- Technical:* Programmers, content developers, testers, information system suppliers, analysts, terminology and classification specialists, health IT professionals and researchers.

## Recommended reading

Recommended reading lists for the different types of readers are as follows. The prerequisites for each document are described in their respective introductions.

Document Name	Business	Clinical	Technical
<i>SNOMED CT Starter Guide</i>	Y	Y	Y
<i>SNOMED CT-AU – Reference Set Implementation Process and Guidance for Healthcare Organisations</i>	Y	Y	
<i>SNOMED CT-AU – Reference Set Implementation Process and Guidance for Vendors</i>	Y	Y	
<i>SNOMED CT-AU - Mapping Guidelines</i>	Y	Y	Y
<i>Clinical Terminology - Guidance for People and Processes</i>	Y	Y	Y
<i>SNOMED CT Technical Implementation Guide</i>			Y
<i>NCTIS - Reference Set Library</i>			Y
<i>NCTIS - Development Approach For Reference Sets</i>			Y
<i>SNOMED CT-AU - Australian Implementation Guidance</i>			Y
<i>Australian Medicines Terminology v3 Model - Technical Implementation Guide</i>			Y
<i>Clinical Terminology – Guidance for Use of Medical Nomenclatures in Information Exchange</i>			Y
<i>Clinical Terminology - Guidance for Use in Healthcare Software</i>			Y
<i>Clinical Terminology - Test Cases for Software and Messaging</i>			Y
<i>SNOMED CT-AU - Reference Set Implementation Toolkit</i>			Y
<i>NCTIS - Adverse Reactions Reference Set Implementation Guide</i>			Y

Most of the above documents are available from <https://www.nehta.gov.au/implementation-resources/ehealth-foundations/snomed-ct-au-common>, except for the following.

## Support

For further support or to provide feedback, please email [help@nehta.gov.au](mailto:help@nehta.gov.au).

## Future releases

All relevant release documents not required to be released under licence security will be released in this end product, along with other implementation resources.

## Previous releases

Date	Version
30 November 2015	<a href="#">EP-2178-2015 - SNOMED CT-AU - Common v1.5</a> This release includes: <ul style="list-style-type: none"><li>• The <i>NCTIS Reference Set Library v2.0</i>, which lists all available reference sets produced by the National Clinical Terminology and Information Service (NCTIS), as well as reference sets provided by licence holders or other relevant bodies that may be useful for implementation and use in Australia.</li><li>• The <i>NCTIS Development Approach for Reference Sets v2.0</i>, which describes the development approach used in creating reference sets for use by the NCTIS community of practice.</li><li>• The <i>SNOMED CT-AU Australian Implementation Guidance v2.0</i>, intended for software developers, technical consumers and the SNOMED CT-AU community of practice. It provides practical guidance for Australian implementations when used in conjunction with the IHTSDO's <i>SNOMED CT Technical Implementation Guide</i>.</li><li>• The <i>SNOMED CT-AU Australian Implementation Guidance Sample Scripts v1.1</i>, contains configuration scripts for the setup of a sample database schema into which the content of the SNOMED CT-AU release bundle may be loaded. This collection of SQL scripts is intended to provide a starting point for understanding how to load and work with SNOMED CT-AU content in a relational database environment.</li></ul> Note: Some of the above documents have a new version scheme. This was changed because they are now published independently of the release file bundle and no longer share the same lifecycle.
