

Secure Messaging v1.0.3 Release Note

22 October 2014

Approved for external information

Summary

End Product: EP-1880:2014 Secure Messaging v1.0.3

Release rationale

Migration of website content

The following documents were previously published on the [eHealthCollaborate web site](#)¹, and have now been moved to the NEHTA website:

- *Secure Message Delivery – Conformance Assessment Scheme*: the process for assessing the conformance of health software that implements Standards Australia's 2010 Australian Technical Specifications ATS 5822 *E-health secure message delivery*, ATS 5821 *E-health XML secured payload profiles*, and ATS 5820 *E-health web services profiles*.
- *Secure Message Delivery – Conformance Test Specifications*: test cases and test scenarios for secure message delivery.
- *Secure Message Delivery – Declaration of Conformity*: for declaring conformance of health software to the secure message delivery Australian Technical Specifications.
- *Secure Message Delivery – Implementation Conformance Statement Proforma*: for providing detailed information about conformance to the Australian Technical Specifications.
- *Secure Message Delivery – Test Summary Report Template*: for use by the software test laboratories that are accredited to perform secure message delivery conformance tests.

Note that the last three documents have had some minor editorial updates to the content, but no material changes.

The conformance assessment scheme does not mandate the use of any specific test tools to automate the test cases; however secure messaging test tools are available from NEHTA that automate the tests cases for the mandatory requirements for each of the four secure message delivery roles, as well as the test cases for immediate mode delivery.

Future releases

Incremental updates to this end product will be released as required.

Previous releases

End Product: EP-1644:2014 Secure Messaging v1.0.2

24 March 2014

Release rationale

This release of the Secure Messaging end product removes the developer resource product components and related product data sheets. These have been republished in a new end product, Secure Messaging Integration Toolkit v1.0, available from the link below.

<http://www.nehta.gov.au/implementation-resources/ehealth-reference-platform/secure-messaging-integration-toolkit>

The Secure Messaging Integration Toolkit contains libraries for B2B connectivity to Secure Message Delivery (SMD) and Endpoint Location Services (ELS), providing sample code for all operations, as well as a Medical Document Management (MDM) library to create the payload for SMD.

This release also removes two product components, which are no longer relevant.

19 December 2013

NEHTA's Secure Messaging V1.01 provides software developers with information and tools to assist in the implementation of Secure Message Delivery (SMD) and Endpoint Location Service (ELS).

Release rationale

This incremental release includes:

- Two new product data sheets (Endpoint Location Service Client Library and Secure Message Delivery Client Library)
- File name change to some of the Endpoint Location Service and Secure Message Delivery product components to group them logically in the product component list (no change to content of the files). These files are marked with an asterisk in the second table below.
