

SNOMED CT-AU – Common v1.3 Release Note

30 November 2014

Approved for external information

Summary

EP - 1833:2014 SNOMED CT-AU – Common v1.3

This end product contains product components that are relevant across SNOMED CT-AU¹ releases.

Release rationale

This release includes:

- The *NCTIS Reference Set Library v20141130*, which lists all available reference sets produced by the National Clinical Terminology and Information Service (NCTIS), as well as reference sets provided by licence holders or other relevant bodies that may be useful for implementation and use in Australia.
- The *SNOMED CT-AU Development Approach for Reference Sets v20141130*, which describes the development approach used in creating reference sets for use by the SNOMED CT-AU community of practice.
- The *SNOMED CT-AU Australian Implementation Guidance v20141130*, intended for software developers, technical consumers and the SNOMED CT-AU community of practice. It provides practical guidance for Australian implementations when used in conjunction with the IHTSDO's [SNOMED CT Technical Implementation Guide](#).²

Additional guidance for use that is common to both SNOMED CT-AU and the Australian Medicines Terminology (AMT) can be found at [Australian Medicines Terminology v3 Model - Common](#)³ on the NEHTA website. This includes:

- *Clinical Terminology - Use of Medical Nomenclatures in Information Exchange*, which provides guidance for healthcare software systems that produce and consume clinical messages containing medical nomenclatures. This guidance also helps software developers to manage risks when developing systems using medical nomenclatures.
- *Clinical Terminology - Guidance for People and Processes*, which provides guidance for those involved in adopting the AMT or SNOMED CT-AU. This guidance may be used to minimise clinical safety risks and maximise the benefits associated with using the AMT or SNOMED CT-AU.
- *Clinical Terminology - Guidance for Use in Healthcare Software*, which provides guidance for managing risks when implementing the AMT or SNOMED CT-AU in healthcare software. This guidance complements the software requirements provided by other eHealth specifications.

Package inclusions

Updated

Identifier	Name
NEHTA-1835:2014	<i>NCTIS - Reference Set Library v20141130</i>
NEHTA-1834:2014	<i>SNOMED CT-AU - Development Approach for Reference Sets v20141130</i>
NEHTA-1836:2014	<i>SNOMED CT-AU - Australian Implementation Guidance v20141130</i>
NEHTA-1833:2014	<i>SNOMED CT-AU – Common - Release Note v1.3 (this document)</i>

No change

Identifier	Name
NEHTA-1790:2014	<i>SNOMED CT-AU - Mapping Guidelines v2.0</i>
NEHTA-1427:2013	<i>SNOMED CT-AU - Reference Set Implementation Toolkit v1.0</i>
NEHTA-1791:2014	<i>NCTIS – Adverse Reactions Reference Set Implementation Guide v1.0</i>

Audience

The audience for this end product includes anyone with a practical interest in SNOMED CT-AU, including:

- business owners, product managers, project managers, and policy makers;
- healthcare professionals and other end users; and
- programmers, content developers, testers, information system suppliers, analysts, terminology/classification specialists, health IT professionals, and researchers.

Support

For further support or to provide feedback, please email help@nehta.gov.au.

Future releases

All relevant release documents not required to be released under licence security will be released in this end product, along with other implementation resources.

Previous releases

Date	Version
------	---------

3 September 2014 [EP-1810-2014 - SNOMED CT-AU - Common v1.2](#)

This release includes:

- The *SNOMED CT-AU - Mapping Guidelines v2.0*, which describes a mapping methodology that should be followed when mapping local and proprietary coding systems to SNOMED CT-AU. Changes from the previous version include the removal of references to conformance and compliance requirements, and additions relating to the maintenance of maps.
- The *NCTIS – Adverse Reactions Reference Set Implementation Guide v1.0*. This document provides a summary of how the Adverse reactions reference set group (the ARRS) and components were developed, as well as more general information about reference set development. There are comprehensive descriptions of the terminology content that the ARRS contains, intended implementation and usage options, and potential considerations for enhancement and expansion. This document has been authored by the Australian e-Health Research Centre at the CSIRO.

Additional guidance for use that is common to both SNOMED CT-AU and the Australian Medicines Terminology (AMT) can be found at [Australian Medicines Terminology v3 Model - Common](#)⁴ on the NEHTA website. This includes:

- *Clinical Terminology - Use of Medical Nomenclatures in Information Exchange*, which provides guidance for healthcare software systems that produce and consume clinical messages containing medical nomenclatures. This guidance also helps software developers to manage risks when developing systems using medical nomenclatures.
 - *Clinical Terminology - Guidance for People and Processes*, which provides guidance for those involved in adopting the AMT or SNOMED CT-AU. This guidance may be used to minimise clinical safety risks and maximise the benefits associated with using the AMT or SNOMED CT-AU.
 - *Clinical Terminology - Guidance for Use in Healthcare Software*, which provides guidance for managing risks when implementing the AMT or SNOMED CT-AU in healthcare software. This guidance complements the software requirements provided by other eHealth specifications.
