# 1 Introduction

## 1.1 Document Purpose and Scope

This document provides a guide to implementing the logical model detailed by the Australian Digital Health Agency's Service Referral (SR) Structured Content Specification (SCS) as an HL7 Clinical Document Architecture (CDA) Release 2 XML document. This implementation guide is based on Version 1.1 of the SR SCS [DH2018a]. The primary aim of the implementation guide is to take implementers step by step through mapping each data component of the SR SCS to a corresponding CDA attribute or element.

This implementation guide contains descriptions of both constraints on the CDA and, where necessary, custom extensions to the CDA, for the purposes of fulfilling the requirements for Australian implementations of SR. The resulting CDA document can be used for the electronic exchange of SR information between healthcare providers.

In addition, this implementation guide presents conformance requirements against which implementers can attest the conformance of their systems.

This release is intended to inform, and seek feedback from, prospective software system designers and their clinical consultants.

We value your questions, comments and suggestions about this document. Please direct your questions or feedback to <[help@digitalhealth.gov.au](mailto:help@digitalhealth.gov.au)>.

## 1.2 Service Referral Definition

A Service Referral is defined in the SR SCS [DH2018a] as:

Referral of a subject of care from one healthcare or human services provider to another.

## 1.3 HL7 Clinical Document Architecture

CDA is a document markup standard that specifies the structure and semantics of clinical documents for the purpose of supporting interoperable exchange and use at human and system levels.

We have chosen CDA as the format for electronic clinical documents because it is consistent with our commitment to a service and document-oriented approach to electronic information exchange, which will contribute to future electronic health records.

Some of the advantages of CDA are:

- It is machine computable and human-readable.
- It provides a standardised display of clinical information without loss of clinical meaning.
- It provides assurance of clinical quality and safety more effectively than message-based interfaces, by storing and displaying the clinical data as entered by the clinician.
- It provides better support than HL7 V2 messages for:
  - more complex information structures, such as pathology synoptic reporting; and
  - terminologies such as SNOMED CT.
- It supports legal attestation by the clinician (requiring that a document has been signed manually or electronically by the responsible individual).
- It is able to be processed by unsophisticated applications (displayed in web browsers, for instance).

- It provides a number of levels of compliance to assist with technical implementation and migration.
- It aligns Australia with e-health initiatives in other countries (such as Canada, UK, USA, Brazil, Germany and Finland).

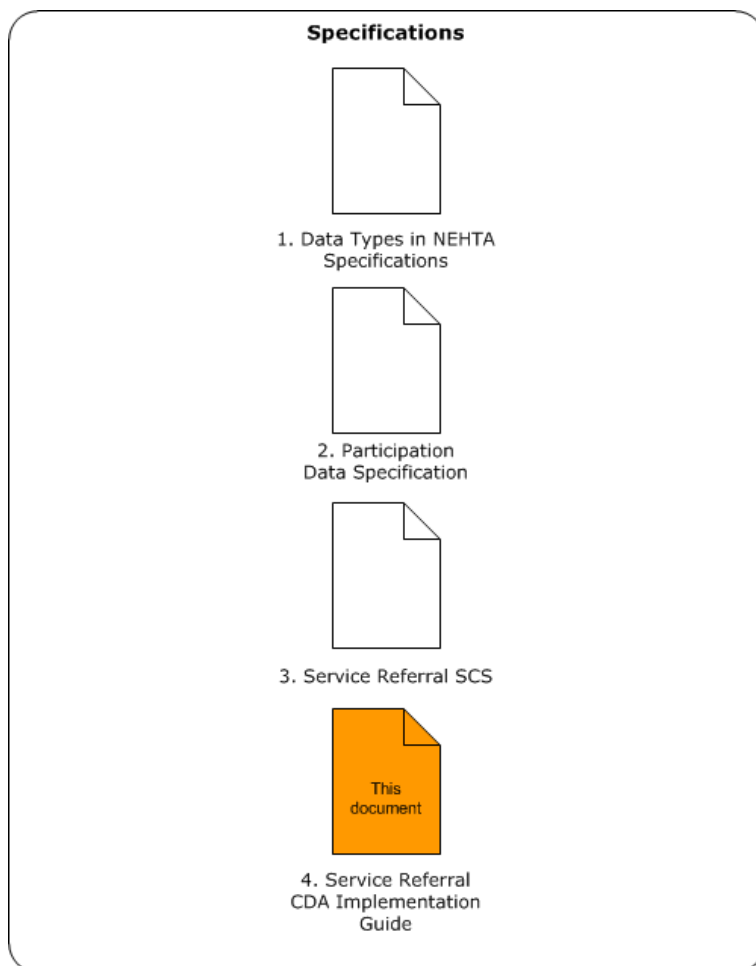

## 1.4 Intended Audience

This document is aimed at software development teams, architects, designers, clinicians and informatics researchers who are responsible for the delivery of clinical applications, infrastructure components and messaging interfaces, and also for those who wish to evaluate the clinical suitability of the Agency-endorsed specifications.

This document and related artefacts are technical in nature and the audience is expected to be familiar with the language of health data specifications and to have some familiarity with health information standards and specifications, such as CDA and Standards Australia IT-014 documents. Definitions and examples are provided to clarify relevant terminology usage and intent.

## 1.5 Document Map

This implementation guide is not intended to be used in isolation. Companion documents are listed below:

1. [Data Types in NEHTA Specifications: A Profile of the ISO 21090 Specification \[NEHT2010c\]](#) is a detailed description of the data types used within the structured content specification.

2. [Participation Data Specification \[DH2017a\]](#) contains the full specification that forms the basis of all participations contained in our structured content specifications.

3. *Service Referral Structured Content Specification [DH2018a]* is a clinical content specification describing the logical data structures, data components, and value domains that constitute a Service Referral.

## 1.6 Acronyms

CDA	Clinical Document Architecture
DCM	Detailed Clinical Model
HL7	Health Level Seven
HPI-I	Healthcare Provider Identifier - Individual
HPI-O	Healthcare Provider Identifier - Organisation
IHI	Individual Healthcare Identifier
NCTIS	National Clinical Terminology and Information Service
OID	Object Identifier
RIM	Reference Information Model
SCS	Structured Content Specification
SR	Service Referral
UUID	Universally Unique Identifier
XHTML	Extensible Hypertext Markup Language
XML	Extensible Markup Language
XSD	XML Schema Definition
XSL	Extensible Stylesheet Language

## 1.7 Keywords

Where used in this document, the keywords **SHALL**, **SHOULD**, **MAY**, **SHALL NOT** and **SHOULD NOT** are to be interpreted as described in *Key Words for Use in RFCs to Indicate Requirement Levels [RFC2119]*.

### Keywords used in this document

Keyword	Interpretation
<b>SHALL</b>	This word, or the term <b>REQUIRED</b> , means that the statement is an absolute requirement of the specification.
<b>SHOULD</b>	This word, or the term <b>RECOMMENDED</b> , means that there may exist valid reasons in particular circumstances to ignore a particular item, but the full implications must be understood and carefully weighed before choosing a different course.
<b>MAY</b>	This word, or the term <b>OPTIONAL</b> , means that an item is truly optional. One implementer may choose to include the item because a particular implementation requires it, or because the implementer determines that it enhances the implementation while another implementer may omit the same item. An implementation which does not include a particular option must be prepared to interoperate with another implementation which does include the option, perhaps with reduced functionality. In the same vein, an implementation which does include a particular option must be prepared to interoperate with another implementation which does not include the option (except of course, for the feature the option provides).
<b>SHALL NOT</b>	This phrase means that the statement is an absolute prohibition of the specification.
<b>SHOULD NOT</b>	This phrase, or the phrase <b>NOT RECOMMENDED</b> means that there may exist valid reasons in particular circumstances when the particular behaviour is acceptable or even useful, but the full implications should be understood and the case carefully weighed before implementing any behaviour described with this label.

## 1.8 Conformance

This document describes how the SR SCS is implemented as a CDA document. Conformance claims are not made against this implementation guide directly; rather, they are made against additional conformance profiles documented elsewhere. Any document that claims conformance to any derived conformance profile **SHALL** meet these base requirements:

- It **SHALL** be a valid HL7 CDA instance. In particular:
  - It **SHALL** be valid against the HL7 CDA Schema (once extensions have been removed, see [W3C XML Schema](#)).
  - It **SHALL** conform to the HL7 V3 R1 data type specification.
  - It **SHALL** conform to the semantics of the RIM and Structural Vocabulary.
- It **SHALL** be valid against the Australian Digital Health Agency CDA Schema that accompanies this implementation guide after any additional extensions not in the Australian Digital Health Agency extension namespace have been removed, along with any other CDA content not described by this implementation guide.
- It **SHALL** use the mappings as they are stated in this document.
- It **SHALL** use all fixed values specified in the mappings (e.g. @attribute="FIXED\_VALUE").
- If the vocabulary has been explicitly stated as 'NS' it **SHALL** be interpreted as:

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>1</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

- It **SHALL** be valid against the additional conformance requirements that are established in this document (i.e. any normative use of the word 'shall' identified by the term presented in uppercase and bold typeface).
- The narrative **SHALL** conform to the requirements described in this implementation guide.
- The document **SHALL** conform to the requirements specified in the CDA Rendering Specification [[NEHT2012s](#)].
- The data as contained in the data types **SHALL** conform to the additional data type specification [[NEHT2010c](#)].
- Any additional content included in the CDA document that is not described by this implementation guide **SHALL NOT** qualify or negate content described by this implementation guide and it **SHALL** be clinically safe for receivers of the document to ignore the non-narrative additions when interpreting the existing content.

A system that *consumes* SR CDA documents may claim conformance if it correctly processes conformant instance documents, including correctly understanding all the information in the header. It may, but is not required to, reject non-conformant documents. Conformant systems that consume SR CDA documents are not required to process any or all of the structured data entries in the CDA document, but they **SHALL** be able to correctly render the document for end-users when appropriate (see [Clinical Document Architecture Release 2](#)).

Conformance profiles of this document **MAY** make additional rules that override this document in regard to:

- Allowing the use of alternative value sets in place of the value sets specified in this document.
- Allowing the use of alternative identifiers in place of the Healthcare Identifiers Service identifiers.
- Making required data elements and section divisions optional.

<sup>1</sup> <http://www.hl7.org/oid/index.cfm?ref=footer>

## 1.9 Known Issues

This section lists known issues with this specification at the time of publishing. We are working on solutions to these issues and encourage comments to help us develop these solutions.

Reference	Description
Throughout document: XML Examples	<p>The examples present in this specification are taken from multiple sample or test referrals, each XML fragment is a standalone fragment that may not fit with other fragments present in the specification.</p> <p>While every effort has been taken to ensure that the examples are consistent with the normative mappings in this message specification, care needs to be taken when copying XML examples for implementation and validation.</p> <p>Where there are conflicts with the written message specification or schema and the XML examples, the specification or schema takes precedence.</p>
Throughout document: R-MIMs	While every effort has been taken to ensure that the R-MIM diagrams are consistent with the normative mappings in this message specification, there may be a few discrepancies between R-MIM diagrams and CDA mapping tables. The CDA mapping takes precedence if there are discrepancies.
Throughout document: Participation types	The participation types in the OID register are not exhaustive, hence the absence of a participation type is not an error.
Throughout document	Australian vs American spelling - in cases where definitions have been taken from HL7 documentation, the American spelling has been preserved, e.g. organization rather than organisation.
6.1.1 SUBJECT OF CARE :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.2 DOCUMENT AUTHOR :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.3.1 PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.3.1 PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
6.1.3.2 PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.3.2 PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
6.1.3.3 PATIENT NOMINATED CONTACT as an ORGANISATION :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.3.3 PATIENT NOMINATED CONTACT as an ORGANISATION :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
6.1.4.1 PRIMARY CARE PROVIDER as a PERSON :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.4.2 PRIMARY CARE PROVIDER as an ORGANISATION :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.4.2 PRIMARY CARE PROVIDER as an ORGANISATION :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.

Reference	Description
6.1.6.1 INTERESTED PARTY as a PERSON :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.6.2 INTERESTED PARTY as an ORGANISATION :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
6.1.6.2 INTERESTED PARTY as an ORGANISATION :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
7.1.1.1.1.1 SERVICE PROVIDER as a PERSON :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
7.1.1.1.1.2 SERVICE PROVIDER as an ORGANISATION :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
7.1.1.1.1.2 SERVICE PROVIDER as an ORGANISATION :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
7.1.1.2 RELATED DOCUMENT	The mapping for the RELATED DOCUMENT data group does not follow the data hierarchy as specified in the SCS because CDA does not allow (without extensions) related documents in the header.
7.1.2.1.1 SERVICE PROVIDER :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
7.1.2.1.1 SERVICE PROVIDER :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.
7.1.3.1 EXCLUSION STATEMENT - ADVERSE REACTIONS	<p>Only the <i>Global Statement</i> logical data element is mapped. The other logical model data elements are deliberately not mapped; representing these elements in CDA would affect a normative change to the current implementation which is beyond the scope of the release of this document.</p> <p>The exclusion statement logical models are the subject of ongoing development and review and are expected to be revised.</p>
7.1.3.2 ADVERSE REACTION :: Substance/Agent	The value of typeCode is fixed to "CAGNT" when not all relationships or associations between the agent and the reaction can be deemed to be "causative" in nature. An additional appropriate typeCode might be "EXPAGNT" (exposure agent).
7.1.3.2 ADVERSE REACTION :: Reaction Type and REACTION EVENT	The current mapping of <i>REACTION EVENT</i> is not aligned with the logical model, which, as a consequence, impacts the mapping choices for <i>Reaction Type</i> . <i>REACTION EVENT</i> should be mapped to an Act or an Organizer with <i>Reaction Type</i> as the code.
7.1.4.1 EXCLUSION STATEMENT - MEDICATIONS	<p>Only the <i>Global Statement</i> logical data element is mapped. The other logical model data elements are deliberately not mapped; representing these elements in CDA would affect a normative change to current implementation which is beyond the scope of the release of this document.</p> <p>The exclusion statement logical models are the subject of ongoing development and review and are expected to be revised.</p>

Reference	Description
7.1.5.1 PROBLEM/DIAGNOSIS :: Date of Resolution/Remission	<p>The mappings for <i>Date of Resolution/Remission</i> do not link back to the <i>Date of Onset</i>, however the <i>Date of Resolution/Remission</i> is not necessarily the end of the problem (or diagnosis) described.</p> <p>The mappings depend on how an instance of the <i>Problem/Diagnosis</i> DCM is defined. If it is defined as an episode of a problem then using <i>effectiveTime.high</i> for <i>Date of Resolution/Remission</i> (thereby linking it to <i>Date of Onset</i>) would be fine because then a recurrence of the same problem would be a separate instance of <i>Problem/Diagnosis</i>. If, however, it is defined as covering the full duration of a problem in a person's life, then several remissions and relapses may occur and <i>effectiveTime.high</i> cannot be used as the <i>Date of Resolution/Remission</i>.</p> <p>It is intended that the <i>Problem/Diagnosis</i> DCM will be modified to represent a single episode of a problem or diagnosis and, when it is, the CDA mappings for <i>Date of Resolution/Remission</i> will change.</p>
7.1.6.1 PATHOLOGY TEST RESULT	The <i>PATHOLOGY TEST RESULT</i> data group is mapped as a Section, however it would be more appropriate to map it as the Observation that has <i>Pathology Test Result Name</i> mapped to its code element.
7.1.6.1 PATHOLOGY TEST RESULT :: Pathology Test Result Name	The mapping of the <i>Pathology Test Result Name</i> logical data element (and by implication <i>PATHOLOGY TEST RESULT</i> ) is to an Observation, however no logical data elements are mapped to the value element of that Observation. An Observation without a value is meaningless calling into question the mapping of <i>Pathology Test Result Name</i> (and by implication <i>PATHOLOGY TEST RESULT</i> ) to an Observation.
7.1.6.1 PATHOLOGY TEST RESULT :: Overall Pathology Test Result Status	The current mapping of the <i>Overall Pathology Test Result Status</i> logical data element to the value element of a subordinate Observation of the <i>Pathology Test Result</i> Observation is semantically weak. This mapping was forced by the choice of logical value domain; consideration should be given to instead using the <i>statusCode</i> element of the <i>Pathology Test Result</i> Observation.
7.1.6.1 PATHOLOGY TEST RESULT :: Test Requested Name	The <i>Test Requested Name</i> logical element is mapped as the value element of a subordinate Observation to the <i>TEST REQUEST DETAILS</i> Act. However, it would be more appropriate to map it as the code element of the <i>TEST REQUEST DETAILS</i> Act.
7.1.6.1 PATHOLOGY TEST RESULT :: Observation DateTime	The <i>Observation DateTime</i> logical element is mapped as the <i>effectiveTime</i> element of a subordinate Observation to the <i>Pathology Test Result</i> Observation. However, it would be more appropriate to map it as the <i>effectiveTime</i> element of the <i>Pathology Test Result</i> Observation.
7.1.6.1.1 Test Specimen Detail (SPECIMEN) 7.1.6.1.2.2 Result Group Specimen Detail (SPECIMEN)	The mapping of the <i>SPECIMEN</i> logical data group is to an Observation, however no logical data elements are mapped to the value element of that Observation. An Observation without a value is meaningless calling into question the mapping of <i>SPECIMEN</i> to Observation.

Reference	Description
7.1.6.1.1 Test Specimen Detail (SPECIMEN) :: Anatomical Location Image 7.1.6.1.1 Test Specimen Detail (SPECIMEN) :: Image	Both <i>Anatomical Location Image</i> and <i>Image</i> are mapped as subordinate ObservationMedia of the <i>SPECIMEN</i> Observation; there is no provided means to differentiate which ObservationMedia represents the logical data element <i>Anatomical Location Image</i> and which represents the logical data element <i>Image</i> .
7.1.6.1.2 Result Group (PATHOLOGY TEST RESULT GROUP) :: Individual Pathology Test Result Status	The current mapping of the <i>Individual Pathology Test Result Status</i> logical data element to the value element of a subordinate Observation of the <i>PATHOLOGY TEST RESULT GROUP</i> Observation is semantically weak. This mapping was forced by the choice of logical value domain; consideration should be given to instead using the <i>statusCode</i> element of the <i>PATHOLOGY TEST RESULT GROUP</i> Observation.
7.1.6.1.2.1 Individual Pathology Test Result Value Reference Ranges (REFERENCE RANGE DETAILS)	The logical model reference range data components have changed as a result of ongoing development, however no changes to the mappings for reference range data components have been included in this specification. Representing these changes in CDA would effect a normative change to current implementation which is beyond the scope of the release of this document.
7.1.6.1.2.2 Result Group Specimen Detail (SPECIMEN) :: Anatomical Location Image 7.1.6.1.2.2 Result Group Specimen Detail (SPECIMEN) :: Image	Both <i>Anatomical Location Image</i> and <i>Image</i> are mapped as subordinate ObservationMedia of the <i>SPECIMEN</i> Observation; there is no provided means to differentiate which ObservationMedia represents the logical data element <i>Anatomical Location Image</i> and which represents the logical data element <i>Image</i> .
7.1.6.2 IMAGING EXAMINATION RESULT	The <i>IMAGING EXAMINATION RESULT</i> data group is mapped as a Section, however it would be more appropriate to map it as the Observation that has <i>Imaging Examination Result Name</i> mapped to its code element.
7.1.6.2 IMAGING EXAMINATION RESULT :: Imaging Examination Result Name	The mapping of the <i>Imaging Examination Result Name</i> logical data element (and by implication <i>IMAGING EXAMINATION RESULT</i> ) is to an Observation, however no logical data elements are mapped to the value element of that Observation. An Observation without a value is meaningless calling into question the mapping of <i>Imaging Examination Result Name</i> (and by implication <i>IMAGING EXAMINATION RESULT</i> ) to an Observation.
7.1.6.2 IMAGING EXAMINATION RESULT :: Observation DateTime	The <i>Observation DateTime</i> logical element is mapped as the <i>effectiveTime</i> element of a subordinate Observation to the <i>Imaging Examination Result</i> Observation. However, it would be more appropriate to map it as the <i>effectiveTime</i> element of the <i>Imaging Examination Result</i> Observation.
7.1.6.2.1.1 Imaging Examination Result Value Reference Ranges (REFERENCE RANGE DETAILS)	The logical model reference range data components have changed as a result of ongoing development, however no changes to the mappings for reference range data components have been included in this specification. Representing these changes in CDA would affect a normative change to current implementation which is beyond the scope of the release of this document.
7.1.6.3.1.1 SERVICE PROVIDER as a PERSON :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
7.1.6.3.1.2 SERVICE PROVIDER as an ORGANISATION :: LOCATION OF PARTICIPATION	LOCATION OF PARTICIPATION is not currently mapped.
7.1.6.3.1.2 SERVICE PROVIDER as an ORGANISATION :: ENTITLEMENT	Prohibition of ENTITLEMENT is not currently mapped.

Reference	Description
8.5 Person Name :: Preferred Name Indicator code	<p>A code for representing “preferred name” has been requested from HL7 International but is not currently available.</p> <p>The proposed code "PRF" for representing preferred name is replaced with "D" <i>Customary Name</i>. In October 2015, the HL7 Patient Administration Workgroup approved a change to the description of <i>Customary Name</i> with code “D” to incorporate the preferred name. This change applies to HL7 Table 0200 Name Type. The definition of <i>Customary Name</i> was changed from “Known as/conventional/the one you use” to “Known as/conventional/the one you use. May also be known as a preferred name”.</p> <p>An updated Australian Digital Health Agency schema allowing use of a code for preferred name will be made available after HL7 V2.9 (which contains the above updates) is published.</p>
10 Vocabularies and Code Sets: AS 4846-2006 and AS 5017-2006 superseded	AS 4846-2014 <i>Person and provider identification in healthcare</i> has been published and supersedes both AS 4846-2006 <i>Healthcare provider identification</i> and AS 5017-2006 <i>Healthcare client identification</i> .
10.2 AS 5017-2006 Health Care Client Identifier Sex	The codeSystemName value in 10.2 AS 5017-2006 Health Care Client Identifier Sex is not the name associated with the OID in the <a href="#">HL7 OID Registry</a> <sup>2</sup> .
REFERRER	The referrer is not explicitly modelled, though the information is available as the Document Author is also the referrer. There is value in modelling the referrer as a separate data component to the author. This can be done using Service Requester in Requested Service, this approach is used in HL7 FHIR and may be used in a future version of this specification

## 2 Guide for Use

This document describes how to properly implement the SR SCS [DH2018a] as a conformant HL7 CDA XML document. The SR specification is contained in two publications:

- 1) A logical specification, which, in conjunction with its related documents (see [Document Map](#)), describes the Service Referral in a form that is consistent with other Agency specifications. It has the potential to be implemented in multiple different exchange formats as is most suitable for a particular context. It describes the data content of a Service Referral as a hierarchy of data components and provides documentation concerning their use and meaning.
- 2) An implementation guide (this document), which specifies how the data described in the SCS is properly represented in a CDA document.

In order to properly implement this specification, the reader should be familiar with the SR SCS and the HL7 CDA documentation, and understand how to read this document.

For further information regarding our structured content specifications, see the links in [Document Map](#).

### 2.1 Clinical Document Architecture Release 2

A CDA document is an XML document built following the rules described in the CDA specification, which conforms to the HL7 CDA Schema provided by HL7. The CDA document is based on the semantics provided by the [HL7 V3 RIM, Data types and Vocabulary \[HL7V3DT\]](#).

A CDA document has two main parts: the header and the body.

The CDA document header is consistent across all CDA documents, regardless of document type. The header identifies and classifies the document and provides information on authentication, the encounter, the patient, and the involved providers.

The body contains the clinical report. The body can be marked-up text (narrative, renderable text) or a combination of both marked-up text and structured data. The marked-up text can be transformed to XHTML and displayed to a human. The structured data allows machine processing of the information shown in the narrative section.

It is a requirement that all of the clinical information **SHALL** be marked up in CDA narratives. These narratives are CDA-defined hypertext, able to be rendered in web browsers with only a standard accompanying transformation. This transformation is produced and distributed by HL7.

It is a conformance requirement that the rendered narrative **SHALL** be able to stand alone as a source of authenticated information for consuming parties. Content from the CDA body **SHALL NOT** be omitted from the narrative.

Further information and guidance on the CDA narrative is available in [Appendix A, CDA Narratives](#).

The following references are recommended to gain a better understanding of CDA:

- [CDA Validation Tools: infoway\\_release\\_2\\_2X\\_18.zip \[INFO2009\]](#)

## 2.2 Mapping Interpretation

The core of this implementation guide is a mapping from the SR SCS to the CDA document representation.

The mappings may not be deterministic; in some cases the differences in approach between the logical model specified in the SCS and the CDA implementation guide makes it inappropriate to have a 1:1 mapping, or any simple mapping that can be represented in a transform. This is especially true for names and addresses, where the SCS requirements, based on Australian Standards such as AS 5017 2006, differ from the HL7 data types and vocabularies which are not based on these standards.

Many of the mappings use one of several common patterns for mapping between the SCS and the CDA document. These common mapping patterns are described in [8 Common Patterns](#).

An example of a mapping section of this implementation guide is illustrated below.

### x.x ITEM NAME

#### Identification (normative)

<b>Name</b>	ITEM NAME
<b>Metadata type</b>	Metadata type e.g. Section, Data Group or Data Element

#### Relationships (normative)

##### Children

Data Type	Name	Occurrence
Icon illustrating the Metadata or Data type.	ITEM NAME (This is a link to another section containing the mapping for this item. Item names in upper case indicate that the item is a section or data group. Item names in title case indicate that the item is a data element).	The number of instances of this child item that may occur.

##### Parent

Data Type	Name	Occurrences (child within parent)
Icon illustrating the Metadata or Data type.	ITEM NAME (This is a link to another section containing the mapping for this item. Item names in upper case indicate that the item is a section or data group. Item names in title case indicate that the item is a data element).	The number of instances of the child item within the parent that may occur.

## CDA R-MIM Representation (non-normative)

The text contains an explanation of the mapping.

The model is a constrained representation of the R-MIM. The colours used in the CDA model align with the usage in the R-MIM. In many cases the cardinalities shown in the model will be less constrained than those shown in the mapping table.

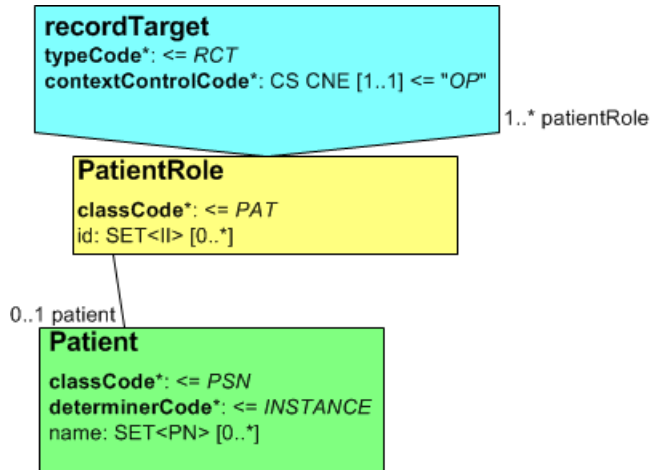

Figure 2.1. Example - Header Part

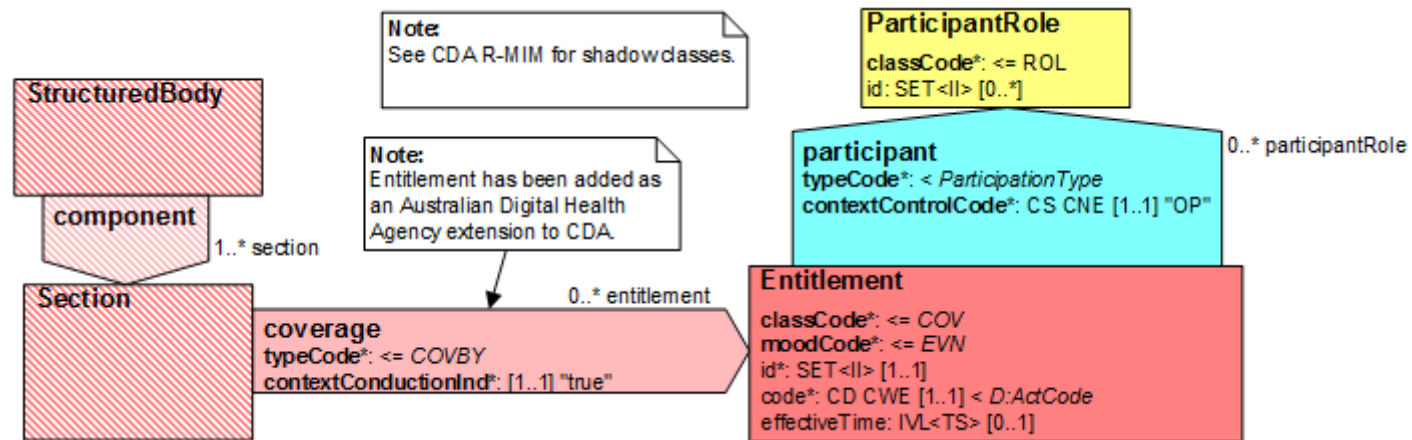

Figure 2.2. Example - Body Part

# CDA Mapping (normative)

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
CDA Element Type (Header, Body Level 2 etc.)			Context: Parent of elements below		
<p>The path in the SCS.</p> <p>Each section in this document corresponds to an SCS section or data group, and is scoped by that section or data group. The hierarchical path uses "&gt;" as a separator for paths within the SCS data hierarchy.</p> <p>If there is a name in round brackets after the path, this is the name of the reused data group for the SCS component.</p> <p>The data component in <b>bold</b> text (the last in the path) is the data component for this row.</p> <p>i.e. Parent Data Component &gt; <b>Child Data Component</b></p>	<p>The definition of the item from the SCS.</p>	<p>The cardinality of the data element in the SCS.</p> <p>The cardinality of the data element in the SCS maps to the cardinality of the element in the CDA document.</p> <p>Where the cardinality of the SCS data element is more constrained than the cardinality of the CDA element then the SCS cardinality takes precedence. That is, if an element is mandatory in the SCS and optional in CDA then it will also become mandatory in the CDA document.</p> <p>If an item with a maximum cardinality &gt; 1 maps to an XML attribute, the attribute will contain multiple values separated by spaces. No such item will have valid values that themselves contain spaces.</p>	<p>The schema element(s) in the CDA document that correspond(s) to the SCS data component.</p> <p>The syntax for this is similar to XPath:</p> <pre>{/name{[index]}}n{&lt;pattern&gt;}</pre> <p>Where:</p> <ul style="list-style-type: none"> <li>{ } indicates optional</li> <li>{ }n means a section that may repeat</li> <li>&lt;pattern&gt; contains a link to a common pattern</li> <li>[index] differentiates two similar mappings</li> </ul> <p>Examples:</p> <ol style="list-style-type: none"> <li>component/act/participation[inf_prov]/role/&lt;<b>Address</b>&gt;</li> <li><b>participant</b></li> </ol> <pre>participant/@typeCode="ORG" participant/associatedEntity participant/associatedEntity/@classCode="SDLOC" participant/associatedEntity/code</pre> <p>A sequence of names refers to the XML path in the CDA document. The path always starts from a defined context which is defined in the grey header row above each group of mapping rows. The last name is shown in bold to make the path easier to read. The last name may be a reference to an attribute or an element, as defined in the Australian Digital Health Agency CDA Schema. The cardinalities of the items map through from the SCS.</p> <p>It is possible to specify an index after the name, such as 'participation[inf_prov]' in Example 1. The presence of the index means there are two or more mappings to the same participation class that differ only in the inner detail. The indexes show which of the multiple mappings is the parent of the inner detail. Note that each of the indexed participations may exist more than once (as specified by the SCS group cardinality). To determine the mapping for these kinds of elements, a document reader must look at the content inside the element.</p> <p>It is possible for one SCS data component to map to more than one CDA schema element as in Example 2.</p> <p>Any fixed attribute values are represented as a separate line of the mapping, such as those shown in Example 2.</p> <p>The path may end with a pattern designator, such as &lt;Address&gt;. This indicates that the mapping involves a number of sub-elements of the named element following the pattern, as shown in the name (which is a link to the appropriate pattern in this document).</p>	<p>The name of the vocabulary.</p>	<p>Helpful additional information about the mapping.</p>

**How to interpret the following example mapping:**

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Header Data Elements</b>					
Context: /ClinicalDocument/					
<b>Subject of Care</b>	Person who receives care services.	1..1	recordTarget/ <b>patientRole</b>		
n/a	n/a	1..1	recordTarget/patientRole/id		Required CDA element.  If there are any entitlements for Subject of Care, this value <b>SHALL</b> be the same as: ClinicalDocument/ component/ structuredBody/ component[admin_obs]/ section/ entry/ act/ participant/ participantRole/ id where participantRole/@classCode = "PAT".
Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > <b>PERSON</b>	An individual who is in the role of healthcare provider, who uses or is a potential user of a healthcare service, or is in some way related to, or a representative of, a subject of care (patient).	1..1	n/a		Not mapped directly, encompassed implicitly in recordTarget/ patientRole/ patient.
Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>PERSON NAME</b>	The appellation by which an individual may be identified separately from any other within a social context.	1..*	recordTarget/patientRole/patient/<Person Name>		See common pattern: <a href="#">Person Name</a> .
<b>CDA Header Data Elements</b>					
Context: /ClinicalDocument/component/structuredBody/component[admin_obs]/section/					
Subject of Care > PARTICIPANT > <b>ENTITLEMENT</b>	The entitlement or right of a participant to act in a given capacity (as defined by Entitlement Type) within a healthcare context.	0..*	<b>ext:coverage2/@typeCode="COVBY"</b>		See Australian Digital Health Agency CDA extension: <a href="#">Entitlement</a> .
			ext:coverage2/ext:entitlement		All data elements within this section <b>SHALL</b> be deemed as CDA Header data elements for conformance assessment.
			ext:coverage2/ext:entitlement/@classCode="COV"		
			ext:coverage2/ext:entitlement/@moodCode="EVN"		
			ext:coverage2/ext:entitlement/ext:participant/@typeCode="BEN"		
			ext:coverage2/ext:entitlement/ext:participant/ext:participantRole/@classCode="PAT"		
			ext:coverage2/ext:entitlement/ext:participant/ext:participantRole/ext:id		<b>SHALL</b> hold the same value as ClinicalDocument/ recordTarget/ recordTarget/ patientRole/ id.

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
Subject of Care > PARTICIPANT > ENTITLEMENT > <b>Entitlement Number</b>	A number or code issued for the purpose of identifying the entitlement or right of a participant to act in a given capacity (as defined by Entitlement Type) within a healthcare context.	1..1	ext:coverage2/ext:entitlement/ <b>ext:id</b>		
Subject of Care > PARTICIPANT > ENTITLEMENT > <b>Entitlement Type</b>	The description of the scope of an entitlement.	1..1	ext:coverage2/ext:entitlement/ <b>ext:code</b>	<a href="#">NCTIS: Admin Codes - Entitlement Type</a>	See <code> for available attributes.
Subject of Care > PARTICIPANT > ENTITLEMENT > <b>Entitlement Validity Duration</b>	The time interval for which an entitlement is valid.	0..1	ext:coverage2/ext:entitlement/ <b>ext:effectiveTime</b>		
Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>EMPLOYMENT DETAIL</b>	A person's occupation and employer.	0..0	recordTarget/patientRole/patient/ <b>ext:asEmployment</b>		

The Subject of Care (Patient) section is part of the context section of the SCS (as opposed to being part of the content section of the SCS). Although it is located in the context section of the SCS, it contains data components that map to the CDA body, as well as data components that map to the CDA header. The information specifying the location of the elements is in the shaded context header row located above each group of mapping rows. The context remains the same until a new context header row starts.

The first row of the mapping (after the context header row), 'Subject of Care', is a CDA Header element and has a context of '/ClinicalDocument' (the root element of a CDA document). Adding together the context and the mapping using '/' gives a full path of:

- 1) /ClinicalDocument/recordTarget/patientRole

Due to the fact that 'Subject of Care' is part of the context section of the SCS (as opposed to a content element), information about it and its child elements can be located in the SCS document by finding the data component 'Subject of Care' in the table of contents under the context section, and navigating to the relevant page.

If the data component is part of the content section of the SCS, information about it could be located by finding the data component (or its parent) in the table of contents under the content section of the SCS.

- 2) The next row in the mapping (n/a) is a row that is not defined in the SCS but which is required by CDA. The CDA schema data element is recordTarget/patientRole/id. This is a technical identifier that is used for system purposes, such as matching ENTITLEMENT details back to the Subject of Care (patient). This identifier **SHALL** be a UUID.
- 3) The next row in the mapping table (Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON) is defined in the SCS but is not mapped directly to the CDA because it is already encompassed implicitly by CDA in recordTarget/patientRole/patient.

Moving to the next row in the table (Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > **PERSON NAME**) and concatenating the context and the mapping, we get:

- 4) /ClinicalDocument/recordTarget/patientRole/patient/<Person Name>

<PersonName> holds a link to the common pattern section where a new table lays out the mapping for the PERSON NAME common pattern.

Moving down the table to the context row '**CDA Header Data Elements**', any data components after this row (until the occurrence of a new context row) map to the CDA body. Because there is no equivalent concept in CDA, an Australian Digital Health Agency CDA extension has been added in order to represent ENTITLEMENT. This extension is indicated by the presence of the 'ext:' prefix. ENTITLEMENT CDA elements **SHALL** be deemed CDA Header data elements for conformance assessment. For the data component 'ENTITLEMENT', adding together the context and the mapping using '/' gives the following paths for the CDA body level 3 data elements ([index] is dependent on context):

- 5) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/@typeCode="COVBY"
- 6) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement
- 7) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/@classCode="COV"
- 8) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/@moodCode="EVN"

9) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/**ext:participant/@typeCode="BEN"**

10) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/ext:participant/**ext:participantRole/@classCode="PAT"**

11) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/ext:participant/ext:participantRole/**ext:id**

This id is also a technical identifier and **SHALL** hold the same value as the /ClinicalDocument/recordTarget/patientRole/id mentioned in comment 1.

The order of the SCS data components is not always the same as the order of the CDA elements. In addition, the CDA elements need to be in the order specified in the Australian Digital Health Agency CDA Schema.

The id element is not specified in the SCS and **SHOULD** be filled with a UUID. This element may be used to reference an act from other places in the CDA document.

The next row in the table (Subject of Care > PARTICIPANT > ENTITLEMENT > Entitlement Number) maps to the id element:

12) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/**ext:id**

The next row in the table (Subject of Care > PARTICIPANT > ENTITLEMENT > Entitlement Type) maps to the code element:

13) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/**ext:code**

The next row in the table (Subject of Care > PARTICIPANT > ENTITLEMENT > Entitlement Validity Duration) maps to the effectiveTime element:

14) /ClinicalDocument/component/structuredBody/component[index]/section/ext:coverage2/ext:entitlement/**ext:effectiveTime**

The next row in the table (Subject of Care > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > **EMPLOYMENT DETAIL**) maps to the ext:asEmployment element:

Where the SCS explicitly prohibits a data component, it is shown in the CDA mapping table with a cardinality of [0..0].

This is interpreted as an absolute prohibition against inclusion.

15) /ClinicalDocument/recordTarget/patientRole/patient/**ext:asEmployment**

See comments in the example below.

### Example 2.1. Mapping Interpretation (non-normative)

```
<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only.
Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid.
While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and
may not be indicative of the expected values in a clinical document.
While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema,
```

the specification or schema will take precedence. -->

```

## 2.3 CDA Extensions

The SCS is based on Australian requirements, either as expressed in existing Australian Standards, or based on extensive consultation with major stakeholders. Not all of these requirements are supported by HL7 Clinical Document Architecture Release 2 (CDA).

CDA provides a mechanism for handling this. Implementation guides are allowed to define extensions, provided some key rules are followed:

- Extensions have a namespace other than the standard HL7v3 namespace.
- The extension cannot alter the intent of the standard CDA document. For example, an extension cannot be used to indicate that an observation does not apply where the CDA document requires it.
- HL7 encourages users to get their requirements formalised in a subsequent version of the standard so as to maximise the use of shared semantics.

Accordingly, a number of extensions to CDA have been defined in this implementation guide. To maintain consistency, the same development paradigm has been used as CDA, and all the extensions have been submitted to HL7 for inclusion into a future release of CDA (Release 3 currently under development).

The extensions in Version 3.0 are incorporated in the namespace `http://ns.electronichealth.net.au/Ci/Cda/Extensions/3.0` as shown in the CDA example output throughout this document. Future versions of CDA extensions will be versioned as per the following example:

```
http://ns.electronichealth.net.au/Ci/Cda/Extensions/4.0
```

## 2.4 W3C XML Schema

This document refers to an accompanying CDA W3C XML Schema (referred to in this document as the Australian Digital Health Agency CDA Schema). This schema differs from the base HL7 CDA W3C XML Schema (referred to in this document as the HL7 CDA Schema) as mentioned below:

- Australian Digital Health Agency CDA extensions have been added to the Australian Digital Health Agency CDA Schema.

CDA documents which include extensions will fail to validate against the HL7 CDA Schema – this is a known limitation.

A Service Referral document that conforms to this specification **SHALL** validate against the Australian Digital Health Agency CDA Schema that accompanies this specification, and **SHALL** validate against the HL7 CDA Schema once the extensions have been removed. Note that merely passing schema validation does not ensure conformance. For more information, refer to [Conformance](#).

## 2.5 Schematron

Many of the rules this document makes about CDA documents cannot be captured in the W3C XML Schema language (XSD) as XSD does not provide a mechanism to state that the value or presence of one attribute is dependent on the values or presence of other attributes (co-occurrence constraints).

Schematron is a rule-based validation language for making assertions about the presence or absence of patterns in XML trees. The rules defined by this document may be captured as Schematron rules. As of this release, the matching Schematron assertions have not yet been developed. We are considering the distribution of these rules in association with future releases of this implementation guide.

## 2.6 Implementation Strategies

There are many platform-specific implementation options for readers implementing a CDA document according to this guide. Examples of these implementation options include:

- Read or write CDA documents directly using a Document Object Model (DOM) or 3rd Generation Language (3GL) code (or both).
- Transform an existing XML format to and from a CDA document.
- Use a toolkit to generate a set of classes from HL7 CDA Schema or the Australian Digital Health Agency CDA Schema provided with this implementation guide, to read or write documents.
- Use existing libraries, possibly open source, that can read and write CDA documents.

The best approach for any given implementation is strongly dictated by existing architecture, technology and legacy constraints of the implementation project or existing system.

## 3 Service Referral Data Hierarchy

The data hierarchy below provides a logical representation of the data structure of the SR SCS data components.

The data hierarchy is a logical representation of the data components of a Service Referral, and is not intended to represent how the data contents are represented in a CDA document.

### Note

Items below whose icon is grey are technical identifiers whose purpose is to facilitate interoperability, sharing of data and secondary use. Typically, such identifiers will be generated internally by systems and not displayed to users since they rarely have clinical significance.

## 4 Administrative Observations

The SR SCS contains a number of data elements that are logically part of the SCS context, but for which there are no equivalent data elements in the CDA header. These data elements are considered to be "Administrative Observations" about the encounter, the patient or some other participant. Administrative Observations is a CDA section that is created to hold these data components in preference to creating extensions for them.

# CDA R-MIM Representation

Figure 4.1 Administrative Observations shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Administrative Observations section is composed of a Section class related to its context ClinicalDocument.structuredBody through a component relationship.

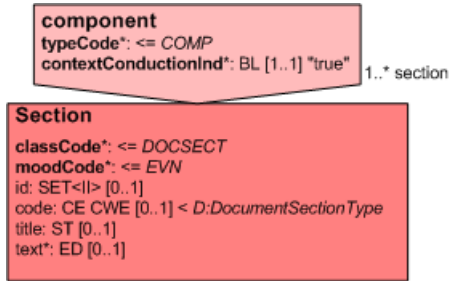

Figure 4.1. Administrative Observations

# CDA Mapping

At most one instance of Administrative Observation section **SHOULD** be present in a CDA document. The cardinality of this section comes from its linking context data elements (e.g. CDA context data element(s) mapped to Administrative Observation Section). If any of the linking context data elements are mandatory, then this section **SHALL** be marked as a mandatory section.

This section **SHALL NOT** be populated if there are no entries or text to go in it.

This section **SHALL** contain a code if provided.

All data elements (with the exception of narrative text) within this section **SHALL** be deemed as CDA Header data elements for conformance assessment.

The <text> data element is **OPTIONAL** and **SHALL** be treated as a Level 2 CDA data element.

**Example 4.1. Administrative Observations XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## 5 CDA Header

This chapter contains CDA-specific header elements (both **REQUIRED** and **OPTIONAL**) that are not specified in the SR SCS specification. The CDA Schema Data Element describes each element.

All the definitions in this chapter are sourced from "HL7 Clinical Document Architecture, Release 2" [\[HL7CDAR2\]](#).

### 5.1 ClinicalDocument

#### Identification

<b>Name</b>	ClinicalDocument
<b>Definition</b>	The ClinicalDocument class is the entry point into the CDA R-MIM, and corresponds to the <ClinicalDocument> XML element that is the root element of a CDA document.

#### Relationships

##### Children

Name	Occurrence
<a href="#">LegalAuthenticator</a>	0..1
<a href="#">InformationRecipient</a>	0..1
<a href="#">Custodian</a>	1..1

## CDA R-MIM Representation

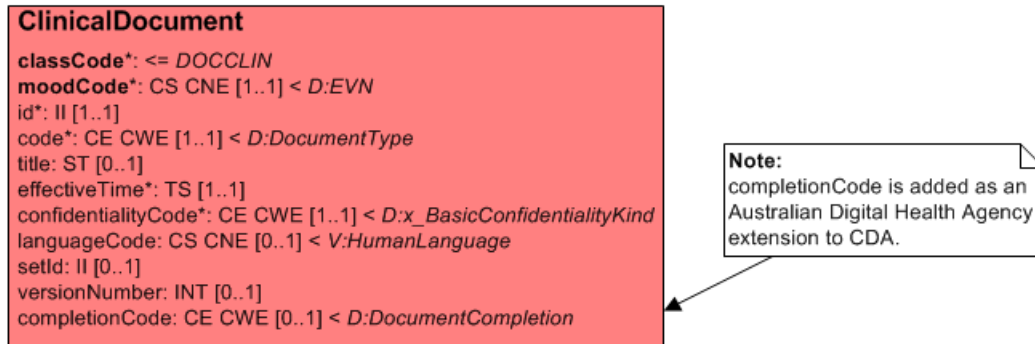

Figure 5.1. ClinicalDocument

## CDA Mapping

CDA Schema Data Element	Definition	Card	Vocab	Comments	
<b>CDA Header Data Elements</b> Context: /					
ClinicalDocument	The ClinicalDocument class is the entry point into the CDA R-MIM, and corresponds to the <ClinicalDocument> XML element that is the root element of a CDA document.	1..1			
ClinicalDocument/typeld	A technology-neutral explicit reference to the CDA Release 2 specification.	1..1			
ClinicalDocument/typeld/@extension="POCD_HD000040"		1..1		The unique identifier for the CDA Release 2 Hierarchical Description.	
ClinicalDocument/typeld/@root="2.16.840.1.113883.1.3"		1..1		The OID for HL7 Registered models.	
ClinicalDocument/templateId	A templateId signals the imposition of a set of template-defined constraints.	1..*		One or more template identifiers that indicate constraints on the CDA document that this document conforms to. One of the identifiers must be the templateId that identifies this specification (see immediately below). Additional template identifiers may be required by other specifications, such as the CDA Rendering Specification.  Systems are not required to recognise any other template identifiers than the one below in order to understand the document as a [type] but these identifiers may influence how the document must be handled.	
ClinicalDocument/templateId/@root="1.2.36.1.2001.1001.100.1002.231"		1..1		The healthcare context-specific name of the published Service Referral CDA Implementation Guide.	
ClinicalDocument/templateId/@extension="1.1"		1..1		The identifier of the version that was used to create the document instance.	
ClinicalDocument/id	Represents the unique instance identifier of a clinical document.	1..1		See <id> for available attributes.  id/@nullFlavor <b>SHALL NOT</b> be present.	
ClinicalDocument/code	The code specifying the particular kind of document (e.g. History and Physical, Discharge Summary, Progress Note).	1..1		code/@nullFlavor <b>SHALL NOT</b> be present.  Referral of a subject of care from one healthcare or human services provider to another.	
ClinicalDocument/code/@code="57133-1"					
ClinicalDocument/code/@codeSystem="2.16.840.1.113883.6.1"					
ClinicalDocument/code/@codeSystemName				The value <b>SHOULD</b> be "LOINC".  See <a href="#">CodeSystem OIDs</a> .	Optional CDA element.
ClinicalDocument/code/@displayName="Referral note"					
ClinicalDocument/title	Represents the title of the document.	0..1			

CDA Schema Data Element	Definition	Card	Vocab	Comments
ClinicalDocument/ <b>effectiveTime</b>	Signifies the document creation time, when the document first came into being. Where the CDA document is a transform from an original document in some other format, the ClinicalDocument.effectiveTime is the time the original document is created.	1..1		See common pattern: <a href="#">time</a> .
ClinicalDocument/ <b>confidentialityCode/@nullFlavor="NA"</b>	Codes that identify how sensitive a piece of information is and/or that indicate how the information may be made available or disclosed.	1..1		
ClinicalDocument/ <b>languageCode</b>	Specifies the human language of character data (whether they be in contents or attribute values).	0..1	<a href="#">[RFC3066]</a> – Tags for the Identification of Languages	<Language Code> – <DIALECT>  The <Language Code> <b>SHALL</b> be "en". The <DIALECT> <b>SHOULD</b> be "AU".
ClinicalDocument/ <b>setId</b>	Represents an identifier that is common across all document revisions.	0..1		
ClinicalDocument/ <b>versionNumber/@value</b>	An integer value used to version successive replacement documents.	0..1		
ClinicalDocument/ <b>ext:completionCode</b>	The lifecycle status of a document.	1..1	<a href="#">NCTIS: Admin Codes - Document Status</a>	See Australian Digital Health Agency CDA extension: <a href="#">ClinicalDocument.completionCode</a> .

## 5.1.1 LegalAuthenticator

### Identification

<b>Name</b>	LegalAuthenticator
<b>Definition</b>	Represents a participant who has legally authenticated the document.

### Relationships

#### Parent

Name	Occurrences (child within parent)
<a href="#">ClinicalDocument</a>	0..1

## CDA R-MIM Representation

Figure 5.2 LegalAuthenticator shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The LegalAuthenticator maps to the CDA Header element legalAuthenticator. The legalAuthenticator participation class represents who has legally authenticated the document. The role is AssignedEntity and is represented by the Person, and optionally Organization, entities.

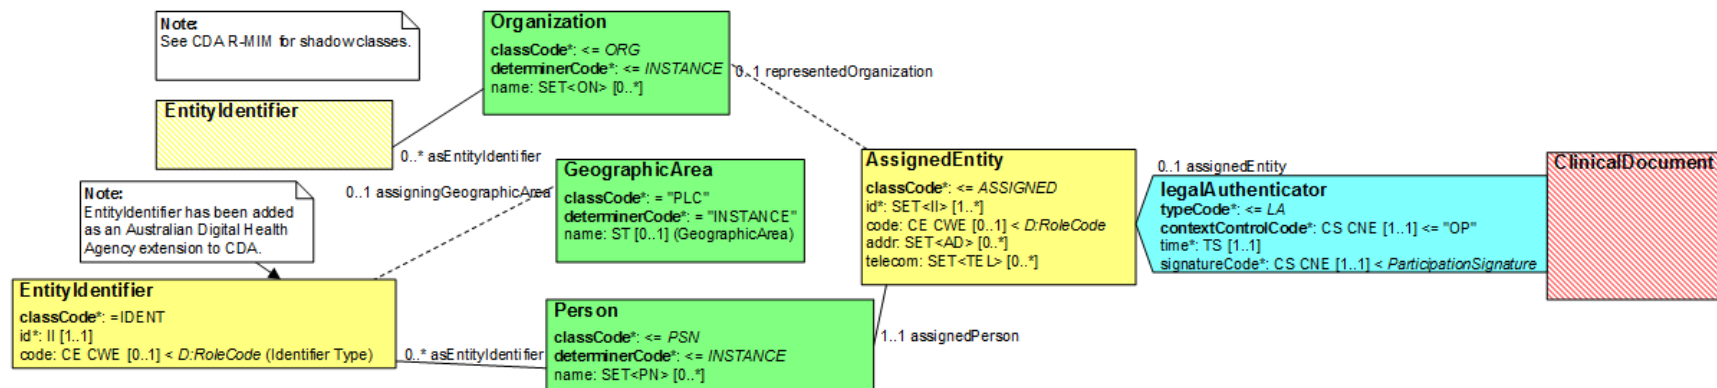

Figure 5.2. LegalAuthenticator

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>1</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

CDA Schema Data Element	Definition	Card	Vocab	Comments
Context: /ClinicalDocument/				
legalAuthenticator	Represents a participant who has legally authenticated the document.	0..1		
legalAuthenticator/time/@value	Indicates the time of authentication.	1..1		Required CDA element. The time/@value <b>SHALL</b> include both a time and a date.
legalAuthenticator/signatureCode/@code="S"	Indicates that the signature has been affixed and is on file.	1..1		
legalAuthenticator/assignedEntity	A legalAuthenticator is a person in the role of an assigned entity (AssignedEntity class). An assigned entity is a person assigned to the role by the scoping organization. The entity playing the role is a person (Person class). The entity scoping the role is an organization (Organization class).	1..1		
legalAuthenticator/assignedEntity/code	The specific kind of role.	0..1	NS	See <code> for available attributes.
legalAuthenticator/assignedEntity/id	A unique identifier for the player entity in this role.	1..1		See <id> for available attributes.
legalAuthenticator/assignedEntity/assignedPerson	The entity playing the role (assignedEntity) is a person.	1..1		
legalAuthenticator/assignedEntity/assignedPerson/<Entity Identifier>	The entity identifier of the person.	0..*		See common pattern: <a href="#">Entity Identifier</a> .
legalAuthenticator/assignedEntity/<Address>	A postal address for the entity (assignedPerson) while in the role (assignedEntity).	0..*		See common pattern: <a href="#">Address</a> .
legalAuthenticator/assignedEntity/<Electronic Communication Detail>	A telecommunication address for the entity (assignedPerson) while in the role (assignedEntity).	0..*		See common pattern: <a href="#">Electronic Communication Detail</a> .
legalAuthenticator/assignedEntity/assignedPerson/<Person Name>	A non-unique textual identifier or moniker for the entity (assignedPerson).	0..*		See common pattern: <a href="#">Person Name</a> .
legalAuthenticator/assignedEntity/representedOrganization	The entity scoping the role (assignedEntity).	0..1		
legalAuthenticator/assignedEntity/representedOrganization/<Entity Identifier>	A unique identifier for the scoping entity (represented organization) in this role (assignedEntity).	0..*		See common pattern: <a href="#">Entity Identifier</a> .
legalAuthenticator/assignedEntity/representedOrganization/name	A non-unique textual identifier or moniker for the entity (representedOrganization).	0..*

## 5.1.2 InformationRecipient

### Identification

<b>Name</b>	Information Recipient
<b>Definition</b>	Represents a recipient who should receive a copy of the document.

### Relationships

#### Parent

Name	Occurrences (child within parent)
<a href="#">ClinicalDocument</a>	0..1

## CDA R-MIM Representation

Figure 5.3 InformationRecipient shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The INFORMATION RECIPIENT maps to the CDA Header element informationRecipient. The informationRecipient participation class represents who should receive a copy of the document. The role is IntendedRecipient and is represented by the Person and/or Organization entities.

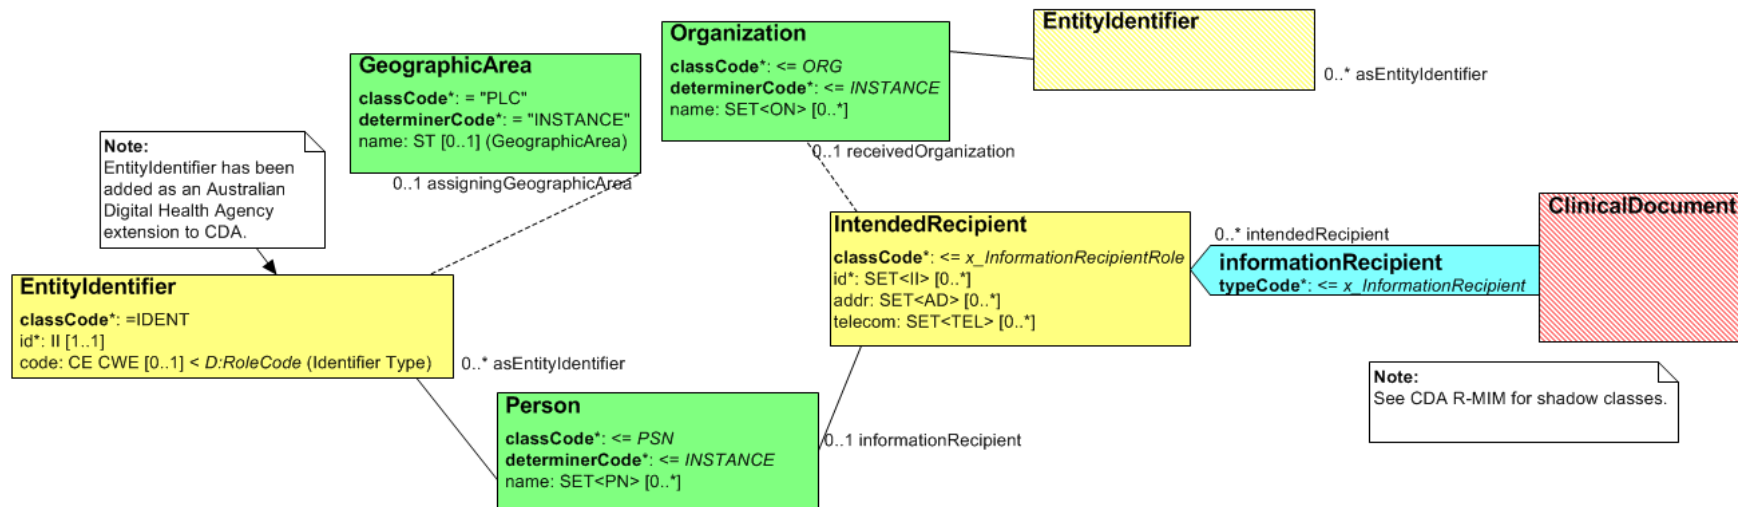

Figure 5.3. InformationRecipient

## CDA Mapping

CDA Schema Data Element	Definition	Card	Vocab	Comments
Context: /ClinicalDocument/				
<b>informationRecipient</b>	Represents a recipient who should receive a copy of the document.	0..1		This <b>SHALL</b> be filled with the ref-eree to whom the subject of care is being referred.
informationRecipient/@typeCode="PRCP"	Type of recipient	1..1		
informationRecipient/intendedRecipient	An informationRecipient is a person in the role of an assigned entity (AssignedEntity class). An assigned entity is a person assigned to the role by the scoping organization. The entity playing the role is a person (Person class). The entity scoping the role is an organization (Organization class).	1..1		
informationRecipient/intendedRecipient/@classCode="ASSIGNED"	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1		
informationRecipient/intendedRecipient/informationRecipient	The entity playing the role (intendedRecipient) is a person.	0..1		
informationRecipient/intendedRecipient/id	A unique identifier for the player entity in this role.	1..1	This <b>SHALL</b> hold the same value as /ClinicalDocument/component/structuredBody/component[ref_det]/section/entry[service]/act/performer/assignedEntity/id.	See <id> for available attributes.
informationRecipient/intendedRecipient/informationRecipient/<Entity Identifier>	The entity identifier of the person.	0..*	If present, the value of one Entity Identifier <b>SHALL</b> be the same as SERVICE PROVIDER > PARTICIPANT > Entity Identifier (performer[srd_rs_service_provider_person]/assignedEntity/assignedPerson/ext:asEntityIdentifier).	See common pattern: <a href="#">Entity Identifier</a> .
informationRecipient/intendedRecipient/<Address>	A postal address for the entity (informationRecipient) while in the role (intendedRecipient).	0..*		See common pattern: <a href="#">Address</a> .
informationRecipient/intendedRecipient/<Electronic Communication Detail>	A telecommunication address for the entity (informationRecipient) while in the role (intendedRecipient).	0..*		See common pattern: <a href="#">Electronic Communication Detail</a> .
informationRecipient/intendedRecipient/informationRecipient/<Person Name>	A non-unique textual identifier or moniker for the entity (informationRecipient).	0..*		See common pattern: <a href="#">Person Name</a> .
informationRecipient/intendedRecipient/receivedOrganization	The entity scoping the role (intendedRecipient).	0..1		

CDA Schema Data Element	Definition	Card	Vocab	Comments
informationRecipient/intendedRecipient/receivedOrganization/< <a href="#">Entity Identifier</a> >	A unique identifier for the scoping entity (represented organization) in this role (intendedRecipient).	0..*	If present, the value of one Entity Identifier <b>SHALL</b> be the same as SERVICE PROVIDER > PARTICIPANT > Entity Identifier (performer[srd_rs_service_provider_organisation]/assignedEntity/representedOrganization/asOrganizationPartOf/wholeOrganization/ext:asEntityIdentifier).	See common pattern: <a href="#">Entity Identifier</a> .
informationRecipient/intendedRecipient/receivedOrganization/ <b>name</b>	A non-unique textual identifier or moniker for the entity (representedOrganization).	0..*		

### Example 5.3. InformationRecipient XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## 6.1.1 SUBJECT OF CARE

### Identification

<b>Name</b>	SUBJECT OF CARE
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

### Relationships

#### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">SERVICE REFERRAL</a>	1..1

## CDA R-MIM Representation

Figure 6.2 SUBJECT OF CARE - Header Data Elements and Figure 6.3 SUBJECT OF CARE - Body Data Elements show a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to both CDA Header and CDA Body elements.

The SUBJECT OF CARE data group maps mostly to CDA Header elements. The recordTarget participation class represents the medical record to which this document belongs. The recordTarget is associated with the Patient class by the PatientRole class. In order to represent the Date of Death of the Subject of Care, Patient.deceasedTime has been added as an Australian Digital Health Agency CDA extension.

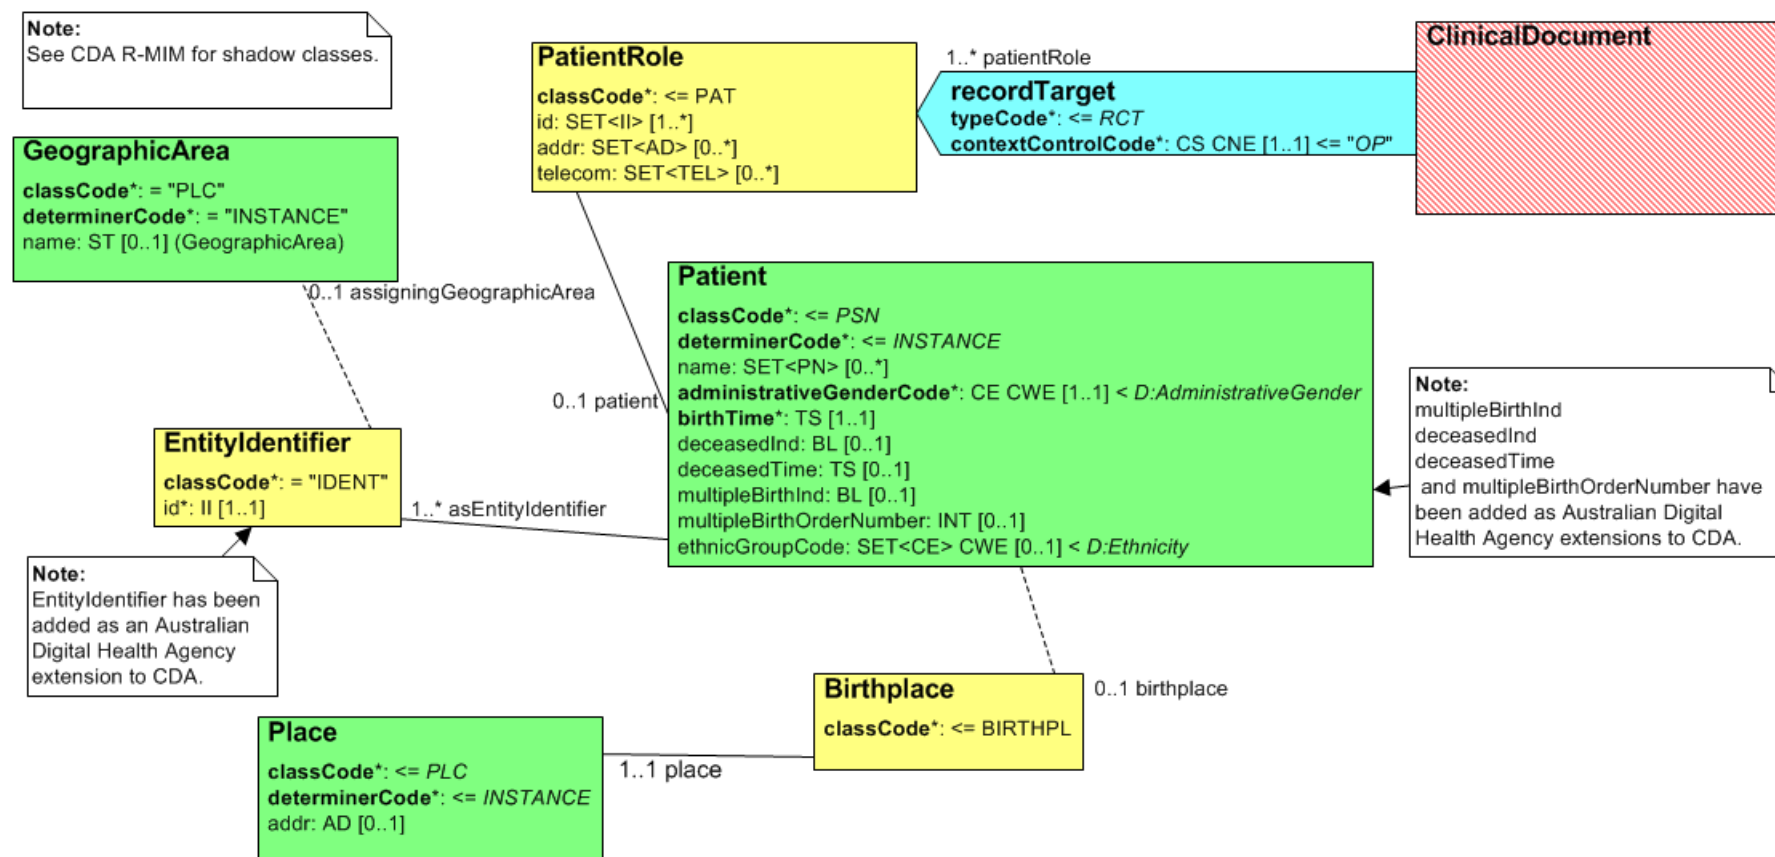

Figure 6.2. SUBJECT OF CARE - Header Data Elements

**Note**

Several data elements contained in the SUBJECT OF CARE data group could not be mapped to CDA Header elements. These data elements have been mapped to Observations in the Administrative Observations section (see [4 Administrative Observations](#)).

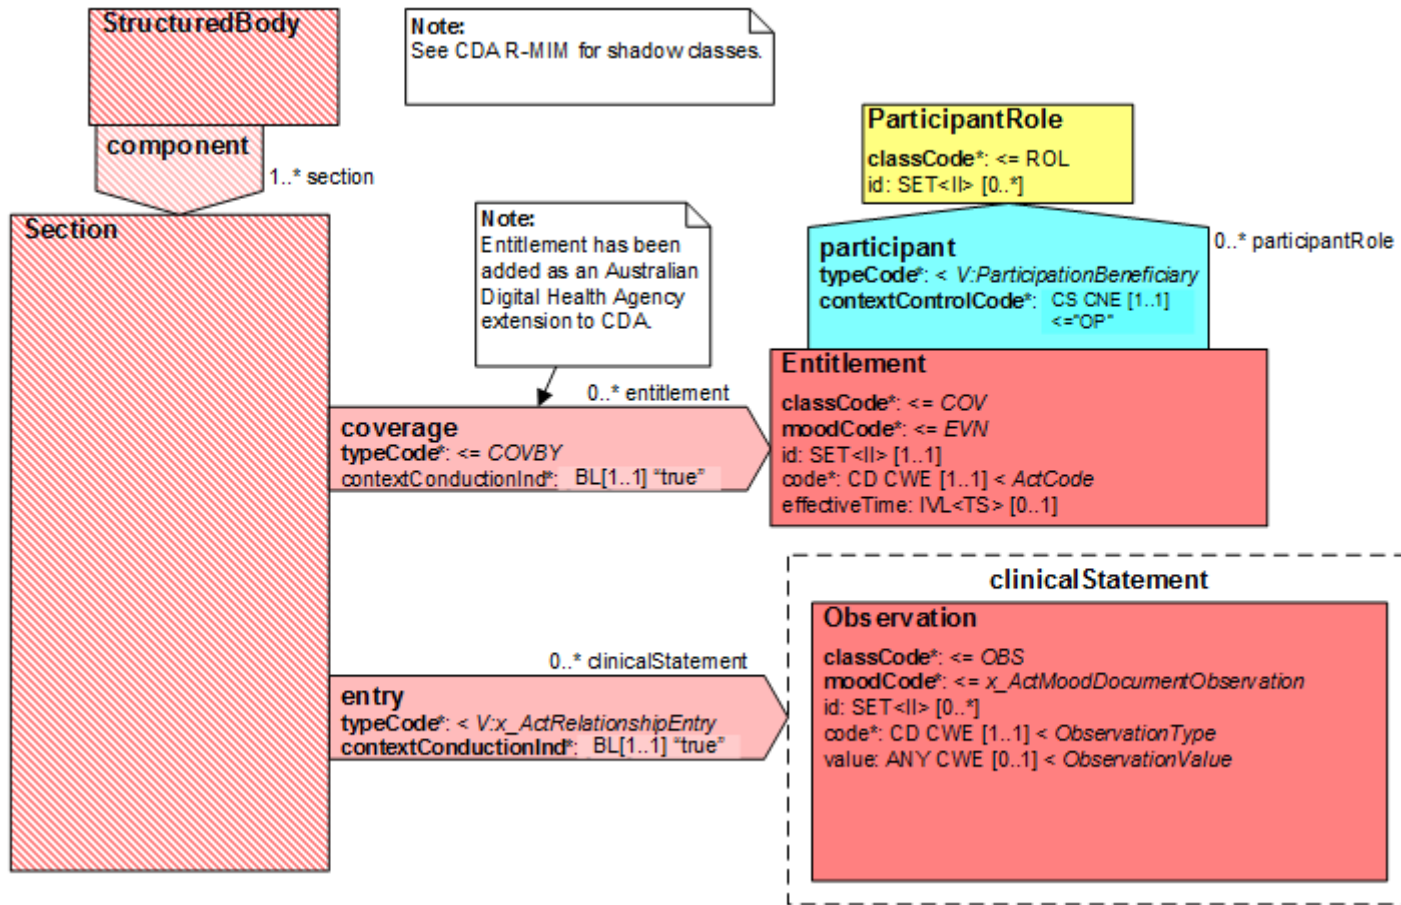

Figure 6.3. SUBJECT OF CARE - Body Data Elements

## CDA Mapping

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Header Data Elements</b>			Context: /ClinicalDocument/		
<b>SUBJECT OF CARE</b>	Person who receives care services.	1..1	recordTarget/ <b>patientRole</b>		
n/a	n/a	1..1	recordTarget/patientRole/ <b>id</b>		Required CDA element. See <id> for available attributes.
<b>SUBJECT OF CARE &gt; Participation Period</b>	The time interval during which the participation in the healthcare event occurred.	0..0	n/a		This logical data component has no mapping to CDA.
<b>SUBJECT OF CARE &gt; LOCATION OF PARTICIPATION</b>	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a> .		LOCATION OF PARTICIPATION is not currently mapped.
<b>SUBJECT OF CARE &gt; Participation Type</b>	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	n/a	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Subject of Care".	Not mapped directly, encompassed implicitly in recordTarget/typeCode = "RCT" (optional, fixed value).
<b>SUBJECT OF CARE &gt; Role</b>	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	n/a	Role <b>SHALL</b> have an implementation-specific value equivalent to "Patient".	Not mapped directly, encompassed implicitly in recordTarget/patientRole/classCode = "PAT".
<b>SUBJECT OF CARE &gt; PARTICIPANT</b>	Details pertinent to the identification of an individual or organisation or device that has participated in a healthcare event/encounter/clinical interaction.	1..1	recordTarget/patientRole/ <b>patient</b>		
<b>SUBJECT OF CARE &gt; PARTICIPANT &gt; Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	1..*	recordTarget/patientRole/patient/< <b>Entity Identifier</b> >		See common pattern: <a href="#">Entity Identifier</a> .  The Subject of Care's Medicare card number is recorded in ENTITLEMENT, not Entity Identifier.
<b>SUBJECT OF CARE &gt; PARTICIPANT &gt; ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	1..*	recordTarget/patientRole/< <b>Address</b> >		See common pattern: <a href="#">Address</a> .
<b>SUBJECT OF CARE &gt; PARTICIPANT &gt; ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	0..*	recordTarget/patientRole/< <b>Electronic Communication Detail</b> >		See common pattern: <a href="#">Electronic Communication Detail</a> .

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE	Represents a choice to be made at run-time between PERSON, ORGANISATION or DEVICE.	1..1	n/a	PERSON OR ORGANISATION OR DEVICE <b>SHALL</b> be instantiated as a PERSON.	This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON	An individual who is in the role of healthcare provider, who uses or is a potential user of a healthcare service, or is in some way related to, or a representative of, a subject of care (patient).	1..1	n/a		Not mapped directly, encompassed implicitly in recordTarget/ patientRole/ patient.
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > PERSON NAME	The appellation by which an individual may be identified separately from any other within a social context.	1..*	recordTarget/patientRole/patient/<Person Name>		See common pattern: <a href="#">Person Name</a> .
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > Relationship to Subject of Care	The relationship of a participant to a subject of care (patient).	0..0	n/a		This logical data component has no mapping to CDA.
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > EMPLOYMENT DETAIL	A person's occupation and employer.	0..0	recordTarget/patientRole/patient/ext:asEmployment		
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > DEMOGRAPHIC DATA	Additional characteristics of a person that may be useful for identification or other clinical purposes.	1..1	n/a		This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
SUBJECT OF CARE > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > DEMOGRAPHIC DATA > Sex	The biological distinction between male and female. Where there is inconsistency between anatomical and chromosomal characteristics, sex is based on anatomical characteristics.	1..1	recordTarget/patientRole/patient/administrativeGenderCode	AS 5017-2006 Health Care Client Identifier Sex	administrativeGenderCode/@nullFlavor <b>SHALL NOT</b> be present.

## Example 6.2. SUBJECT OF CARE XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## 6.1.2 DOCUMENT AUTHOR

### Identification

<b>Name</b>	DOCUMENT AUTHOR
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

### Relationships

#### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">SERVICE REFERRAL</a>	1..1

## CDA R-MIM Representation

Figure 6.4 DOCUMENT AUTHOR shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The DOCUMENT AUTHOR data group instantiated as PERSON is related to its context of ClinicalDocument by the author participation class. An author is a person in the role of assignedAuthor (AssignedAuthor class). The entity playing the role is assignedAuthorChoice (Person class). The entity identifier of the participant is mapped to the EntityIdentifier class (Australian Digital Health Agency CDA extension) and is associated to the assignedAuthorChoice.

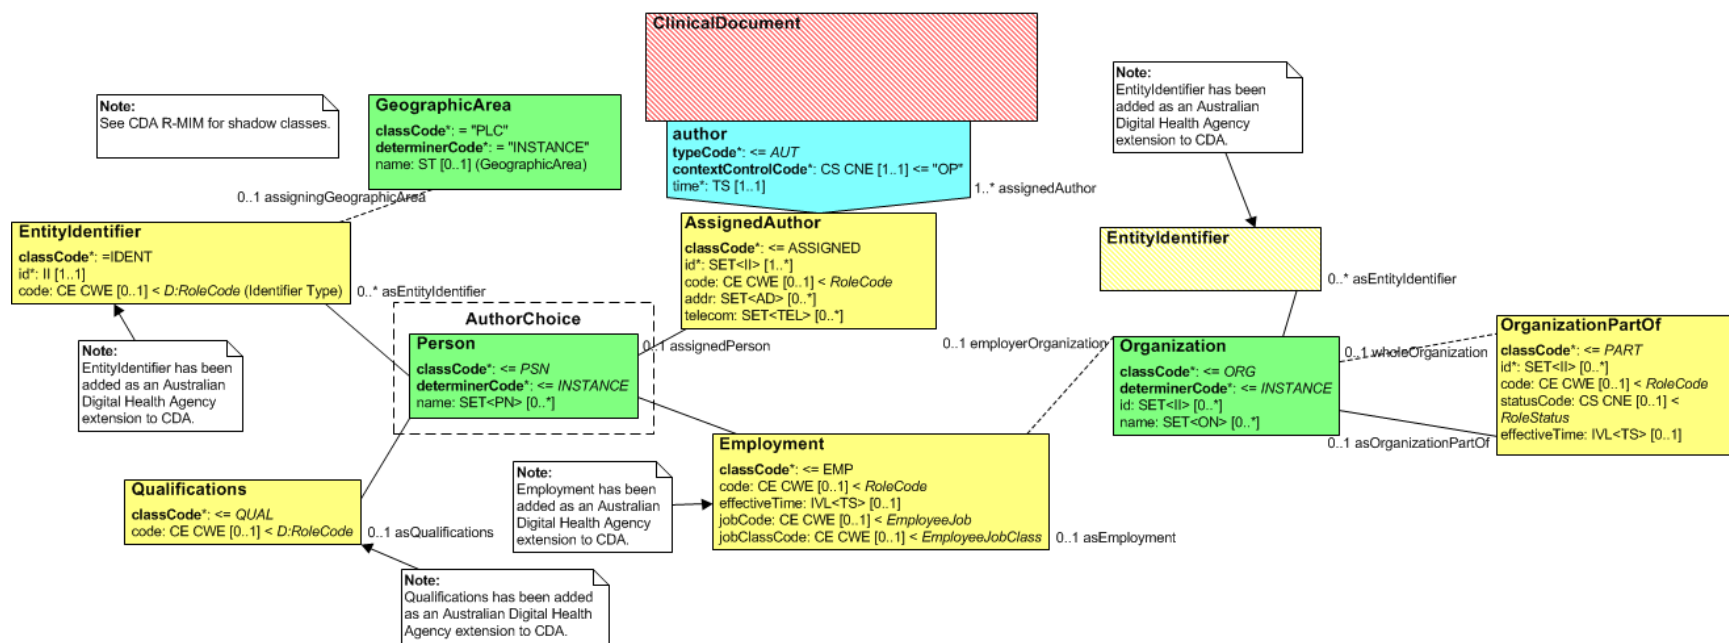

Figure 6.4. DOCUMENT AUTHOR

Figure 6.5 DOCUMENT AUTHOR - ENTITLEMENT shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

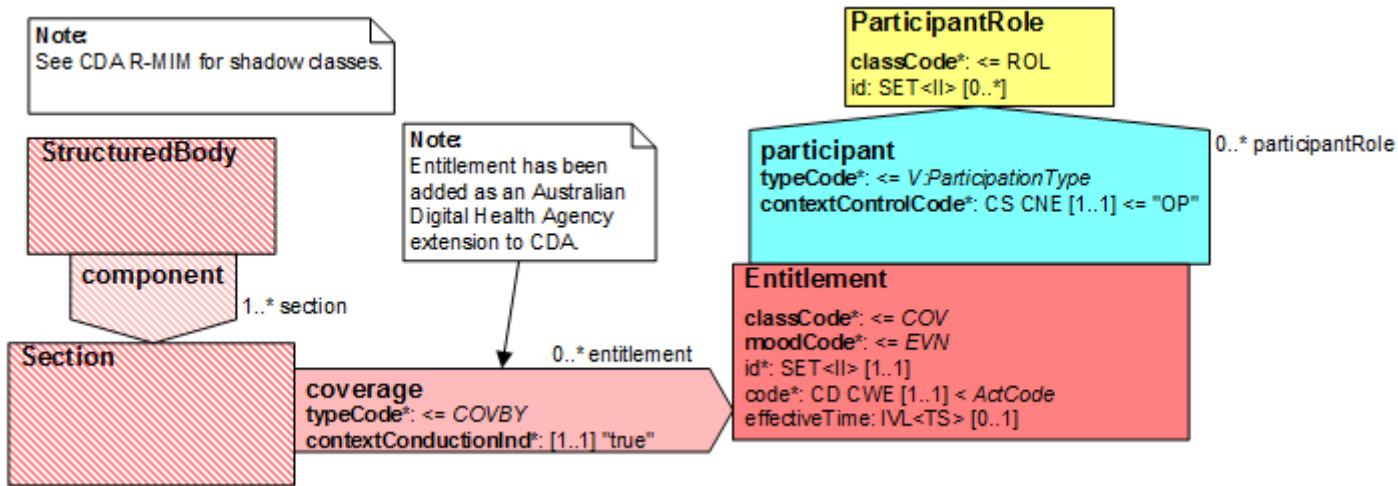

Figure 6.5. DOCUMENT AUTHOR - ENTITLEMENT

## CDA Mapping

### Note

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Header Data Elements</b>					
Context: /ClinicalDocument/					
DOCUMENT AUTHOR	Composer of the document.	1..1	author		Document Author <b>SHALL</b> be the referral sender, who is the healthcare or human services provider responsible for the content of the letter, even if another party physically authored or composed the referral.
n/a	n/a	1..1	author/assignedAuthor/id		Required CDA element. See <id> for available attributes.
DOCUMENT AUTHOR > Participation Period	The time interval during which the participation in the healthcare event occurred.	1..1	author/time	Although the definition of this element states that it is a time interval, the following applies: "The end of the participation period of a Document Author participation is the time associated with the completion of editing the content of a document." Thus only the end time need be recorded.	Required CDA element. The author/time element <b>SHALL</b> be implemented as either: <ul style="list-style-type: none"> <li>a value attribute (populated with the end time of the authorship or encounter, as appropriate); or</li> <li>a high element AND a low element, both with value attributes and neither with a nullFlavor attribute.</li> </ul>
DOCUMENT AUTHOR > LOCATION OF PARTICIPATION	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a> .		LOCATION OF PARTICIPATION is not currently mapped.
DOCUMENT AUTHOR > Participation Type	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	n/a	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Document Author".	Not mapped directly; encompassed implicitly in author/typeCode="AUT" (optional, fixed value).

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
DOCUMENT AUTHOR > <b>Role</b>	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	author/assignedAuthor/code	Role <b>SHOULD</b> have a value chosen from <a href="#">1220.0 - ANZSCO - Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1 [ABS2009]</a> .  However, if a suitable value in this set cannot be found, then any code set that is both registered with HL7 and publicly available <b>MAY</b> be used.	See <code> for available attributes.
DOCUMENT AUTHOR > <b>PARTICIPANT</b>	Details pertinent to the identification of an individual or organisation or device that has participated in a healthcare event/encounter/clinical interaction.	1..1	author/assignedAuthor/assignedPerson		
DOCUMENT AUTHOR > PARTICIPANT > <b>Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	1..*	author/assignedAuthor/assignedPerson/<Entity Identifier>		See common pattern: <a href="#">Entity Identifier</a> .
DOCUMENT AUTHOR > PARTICIPANT > <b>ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	0..*	author/assignedAuthor/<Address>	AUSTRALIAN OR INTERNATIONAL ADDRESS <b>SHALL</b> be instantiated as an AUSTRALIAN ADDRESS.  Address Purpose (addr/@use) <b>SHALL</b> be set to Business (see <a href="#">AS 5017-2006: Health Care Client Identifier Address Purpose</a> ).	See common pattern: <a href="#">Address</a> .
DOCUMENT AUTHOR > PARTICIPANT > <b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	0..*	author/assignedAuthor/<Electronic Communication Detail>	Electronic Communication Usage Code (telecom/@use) <b>SHALL</b> be set to Workplace (see <a href="#">HL7: TelecommunicationAddressUse</a> ).	See common pattern: <a href="#">Electronic Communication Detail</a> .
DOCUMENT AUTHOR > PARTICIPANT > <b>PERSON OR ORGANISATION OR DEVICE</b>	Represents a choice to be made at run-time between PERSON, ORGANISATION or DEVICE.	1..1	n/a	PERSON OR ORGANISATION OR DEVICE <b>SHALL</b> be instantiated as a PERSON.	This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
DOCUMENT AUTHOR > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > <b>PERSON</b>	An individual who is in the role of healthcare provider, who uses or is a potential user of a healthcare service, or is in some way related to, or a representative of, a subject of care (patient).	1..1	n/a		Not mapped directly; encompassed implicitly in author/assignedAuthor/assignedPerson.

## 6.1.3 PATIENT NOMINATED CONTACT

### Identification

<b>Name</b>	PATIENT NOMINATED CONTACT
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

### Relationships

#### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">SERVICE REFERRAL</a>	0..*

### Choices

#### Note

Mentioned below are the possible 'PATIENT NOMINATED CONTACT' instantiation choices.

Data Type	Name
	<a href="#">PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider</a>
	<a href="#">PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider</a>
	<a href="#">PATIENT NOMINATED CONTACT as an ORGANISATION</a>

### 6.1.3.1 PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider

#### CDA R-MIM Representation

[Figure 6.6 PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The PATIENT NOMINATED CONTACT data group instantiated as 'PERSON' is related to its context of ClinicalDocument by the participant participation class. A participant is a person in the role of associatedEntity (AssociatedEntity class). The entity playing the role is associatedPerson (Person class). The employment of the participant is mapped to the Employment class (Australian Digital Health Agency CDA extension) which is related to the Person class.

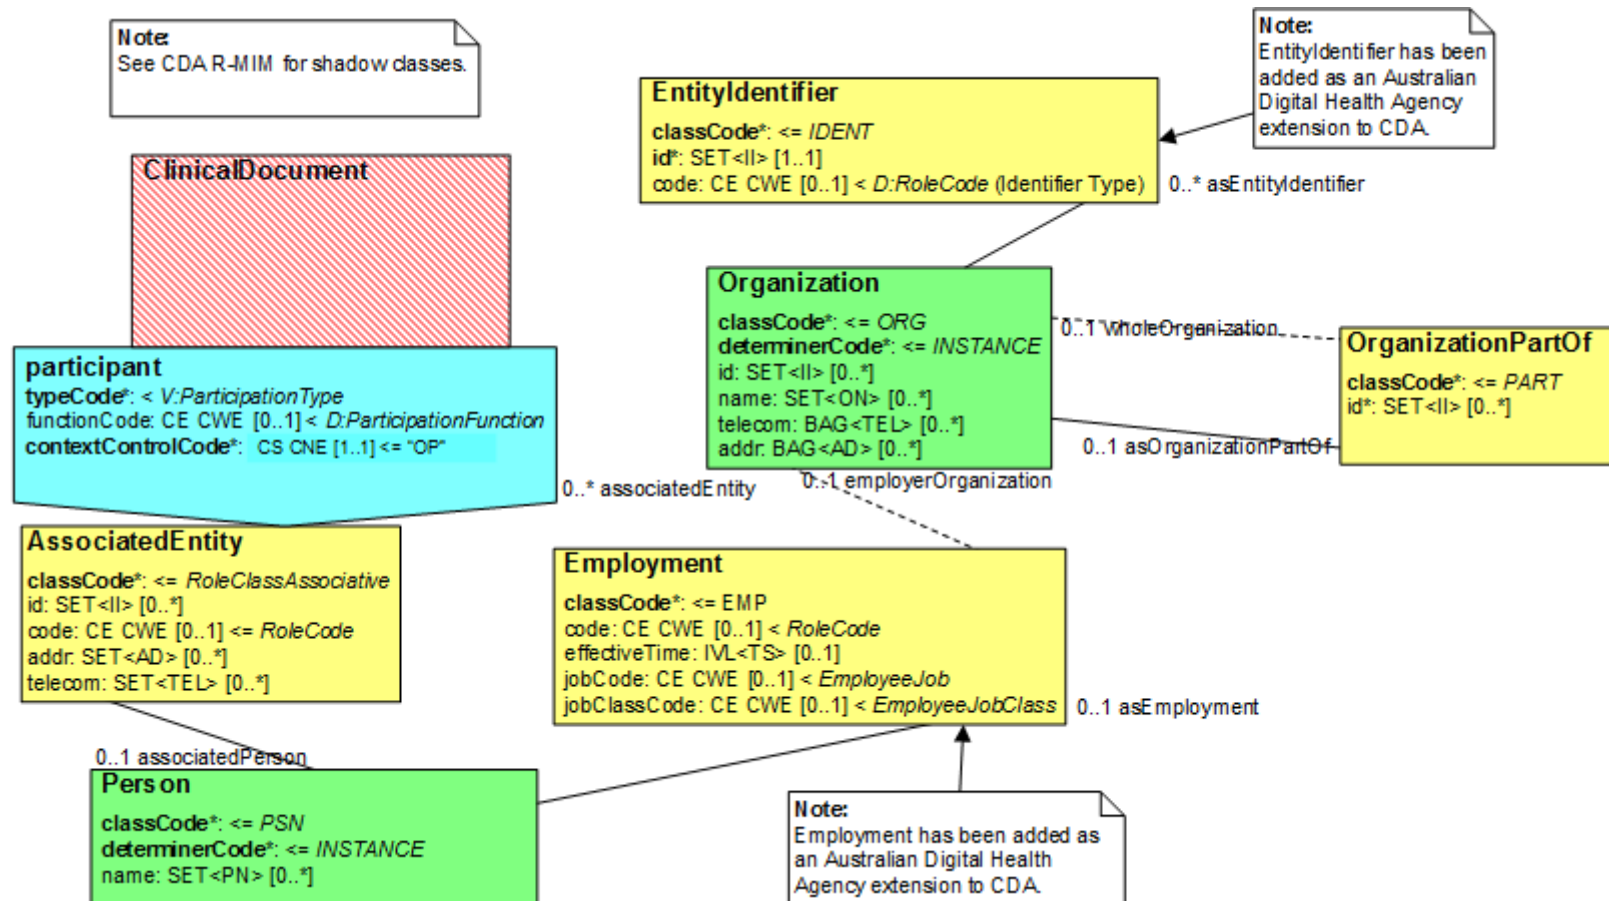

Figure 6.6. PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>1</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Header Data Elements</b>			Context: /ClinicalDocument/		
<b>PATIENT NOMINATED CONTACT</b>	Contact nominated to receive information about the subject of care.	0..*	<b>participant[provider_contact_person]</b>		Each instance of this participant <b>SHALL</b> contain at least one instance of : <ul style="list-style-type: none"> <li>• ADDRESS (participant/associatedEntity/addr), or</li> <li>• ELECTRONIC COMMUNICATION DETAIL (participant/associatedEntity/telecom).</li> </ul>
n/a	n/a	1..1	participant[provider_contact_person]/associatedEntity/id		Required CDA element. See <id> for available attributes.
<b>PATIENT NOMINATED CONTACT &gt; Participation Period</b>	The time interval during which the participation in the healthcare event occurred.	0..0	participant[provider_contact_person]/time		
<b>PATIENT NOMINATED CONTACT &gt; LOCATION OF PARTICIPATION</b>	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a> .		LOCATION OF PARTICIPATION is not currently mapped.
<b>PATIENT NOMINATED CONTACT &gt; Participation Type</b>	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	participant[provider_contact_person]/@typeCode="IRCP"	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Patient Nominated Contact".	

<sup>1</sup> <http://www.hl7.org/oid/index.cfm?ref=footer>

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
PATIENT NOMINATED CONTACT > <b>Role</b>	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	participant[provider_contact_person]/associatedEntity/@classCode="CON" participant[provider_contact_person]/associatedEntity/code	Role <b>SHOULD</b> have a value chosen from <i>1220.0 - ANZSCO - Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1 [ABS2009]</i> .  However, if a suitable value in this set cannot be found, then any code set that is both registered with HL7 and publicly available <b>MAY</b> be used.	See <code> for available attributes.
PATIENT NOMINATED CONTACT > <b>PARTICIPANT</b>	Details pertinent to the identification of an individual or organisation or device that has participated in a healthcare event/encounter/clinical interaction.	1..1	participant[provider_contact_person]/associatedEntity/associatedPerson		
PATIENT NOMINATED CONTACT > PARTICIPANT > <b>Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	0..0	participant[provider_contact_person]/associatedEntity/associatedPerson/ext:asEntityIdentifier		
PATIENT NOMINATED CONTACT > PARTICIPANT > <b>ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	0..*	participant[provider_contact_person]/associatedEntity/<Address>	AUSTRALIAN OR INTERNATIONAL ADDRESS <b>SHALL</b> be instantiated as an AUSTRALIAN ADDRESS.	See common pattern: <a href="#">Address</a> .
PATIENT NOMINATED CONTACT > PARTICIPANT > <b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	0..*	participant[provider_contact_person]/associatedEntity/<Electronic Communication Detail>		See common pattern: <a href="#">Electronic Communication Detail</a> .
PATIENT NOMINATED CONTACT > PARTICIPANT > <b>PERSON OR ORGANISATION OR DEVICE</b>	Represents a choice to be made at run-time between PERSON, ORGANISATION or DEVICE.	1..1	n/a	PERSON OR ORGANISATION OR DEVICE <b>SHALL</b> be instantiated as a PERSON.	This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
PATIENT NOMINATED CONTACT > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > <b>PERSON</b>	An individual who is in the role of healthcare provider, who uses or is a potential user of a healthcare service, or is in some way related to, or a representative of, a subject of care (patient).	1..1	n/a		Not mapped directly, encompassed implicitly in participant[provider_contact_person]/associatedEntity/associatedPerson.
PATIENT NOMINATED CONTACT > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>PERSON NAME</b>	The appellation by which an individual may be identified separately from any other within a social context.	1..*	participant[provider_contact_person]/associatedEntity/associatedPerson/<Person Name>		See common pattern: <a href="#">Person Name</a> .
PATIENT NOMINATED CONTACT > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>Relationship to Subject of Care</b>	The relationship of a participant to a subject of care (patient).	0..0	participant[provider_contact_person]/associatedEntity/associatedPerson/ext:personalRelationship

## 6.1.3.2 PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider

### CDA R-MIM Representation

[Figure 6.7 PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The PATIENT NOMINATED CONTACT data group instantiated as 'PERSON' is related to its context of ClinicalDocument by the participant participation class. A participant is a person in the role of associatedEntity (AssociatedEntity class). The entity playing the role is associatedPerson (Person class). The entity identifier of the participant is mapped to the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is related to the associatedEntity. The relationship to the subject of care is mapped to the PersonalRelationship class (Australian Digital Health Agency CDA extension) which is related to the associatedEntity.

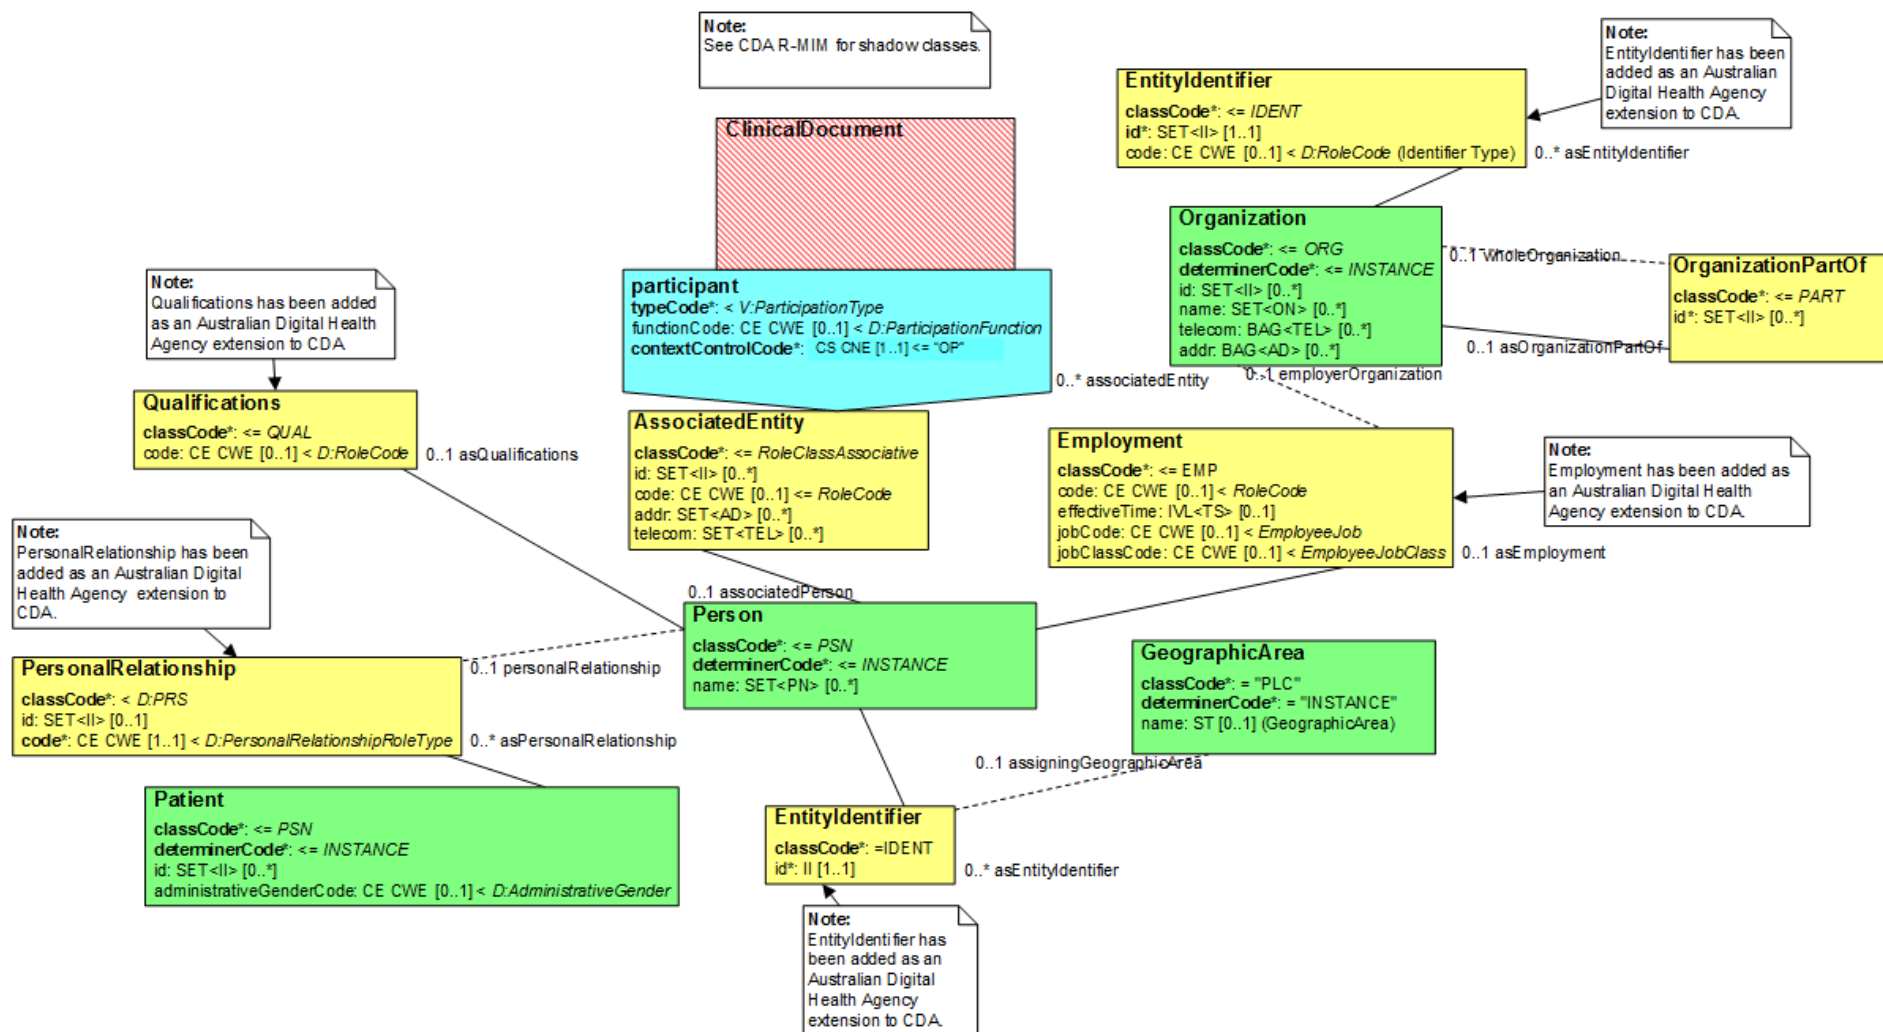

Figure 6.7. PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>2</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

### 6.1.3.3 PATIENT NOMINATED CONTACT as an ORGANISATION

#### CDA R-MIM Representation

Figure 6.8 PATIENT NOMINATED CONTACT as an ORGANISATION shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The PATIENT NOMINATED CONTACT data group instantiated as 'ORGANISATION' is related to its context of ClinicalDocument by the participant Participation class. A participant is an organisation in the role of associatedEntity (AssociatedEntity class). The entity playing the role is scopingOrganization (Organization class). The department/unit name is mapped to scopingOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is related to the wholeOrganization.

## 6.1.4 PRIMARY CARE PROVIDER

### Identification

<b>Name</b>	PRIMARY CARE PROVIDER
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

### Relationships

#### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">SERVICE REFERRAL</a>	0..1

### Choices

#### Note

Mentioned below are the possible mutually exclusive 'PRIMARY CARE PROVIDER' instantiation choices.

Data Type	Name
	<a href="#">PRIMARY CARE PROVIDER as a PERSON</a>
	<a href="#">PRIMARY CARE PROVIDER as an ORGANISATION</a>

### 6.1.4.1 PRIMARY CARE PROVIDER as a PERSON

#### CDA R-MIM Representation

Figure 6.9 PRIMARY CARE PROVIDER as a PERSON shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The PRIMARY CARE PROVIDER data group instantiated as 'PERSON' is related to its context of ClinicalDocument by the participant participation class. A participant is a person in the role of associatedEntity (AssociatedEntity class). The entity playing the role is associatedPerson (Person class). The entity identifier of the participant is mapped to the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the associatedEntity. Employment detail is mapped to the Australian Digital Health Agency CDA extension Employment.

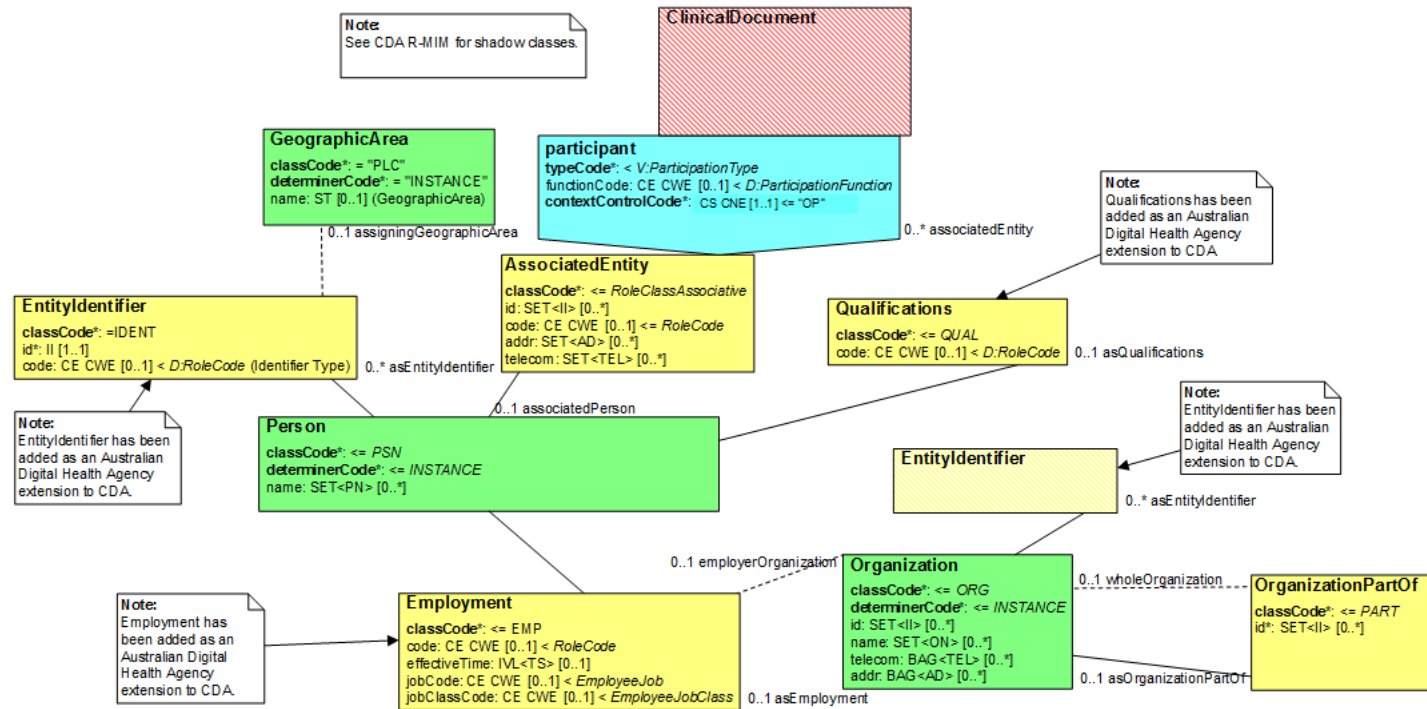

Figure 6.9. PRIMARY CARE PROVIDER as a PERSON

Figure 6.10 PRIMARY CARE PROVIDER as a PERSON - ENTITLEMENT shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

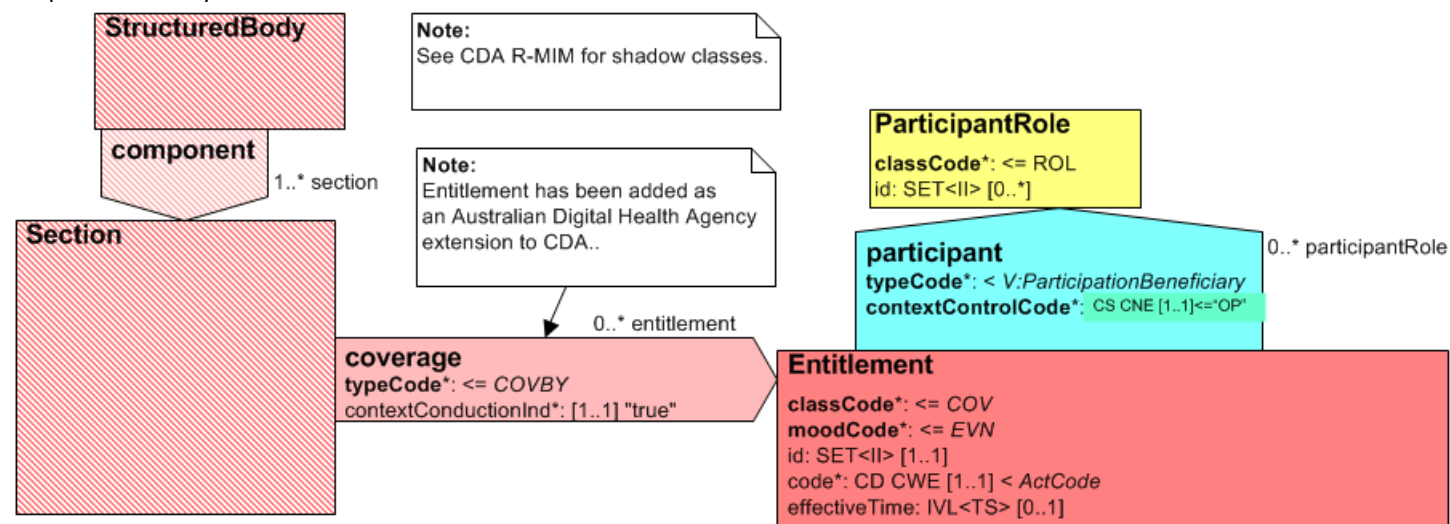

Figure 6.10. PRIMARY CARE PROVIDER as a PERSON - ENTITLEMENT

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>3</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Header Data Elements</b>			Context: /ClinicalDocument/		
PRIMARY CARE PROVIDER	Healthcare provider (person or organisation) nominated by the subject of care as being primarily responsible for their ongoing healthcare.	0..1	participant[care_provider_person]		
n/a	n/a	1..1	participant[care_provider_person]/associatedEntity/id		Required CDA element. See <id> for available attributes.
PRIMARY CARE PROVIDER > Participation Period	The time interval during which the participation in the healthcare event occurred.	0..0	participant[care_provider_person]/time		
PRIMARY CARE PROVIDER > LOCATION OF PARTICIPATION	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a> .		LOCATION OF PARTICIPATION is not currently mapped.
PRIMARY CARE PROVIDER > Participation Type	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	participant[care_provider_person]/@typeCode="PART"	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Primary Care Provider".	
			participant[care_provider_person]/functionCode/@code="PCP"		
PRIMARY CARE PROVIDER > Role	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	participant[care_provider_person]/associatedEntity/code	Role <b>SHOULD</b> have a value chosen from <a href="#">1220.0 - ANZSCO - Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1 [ABS2009]</a> .  However, if a suitable value in this set cannot be found, then any code set that is both registered with HL7 and publicly available <b>MAY</b> be used.	See <code> for available attributes.
			participant[care_provider_person]/associatedEntity/@classCode

## 6.1.4.2 PRIMARY CARE PROVIDER as an ORGANISATION

### CDA R-MIM Representation

Figure 6.11 PRIMARY CARE PROVIDER as an ORGANISATION shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The PRIMARY CARE PROVIDER data group instantiated as 'ORGANISATION' is related to its context of ClinicalDocument by the participant Participation class. A participant is an organisation in the role of associatedEntity (AssociatedEntity class). The entity playing the role is scopingOrganization (Organization class). The department/unit name is mapped to scopingOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the wholeOrganization.

## 6.1.5 INTERESTED PARTY

### Identification

<b>Name</b>	INTERESTED PARTY
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

### Relationships

#### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">SERVICE REFERRAL</a>	0..*

### Choices

#### Note

Mentioned below are the possible 'INTERESTED PARTY' instantiation choices.

Data Type	Name
	<a href="#">INTERESTED PARTY as a PERSON</a>
	<a href="#">INTERESTED PARTY as an ORGANISATION</a>

### 6.1.5.1 INTERESTED PARTY as a PERSON

#### CDA R-MIM Representation

Figure 6.12 INTERESTED PARTY as a PERSON shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The INTERESTED PARTY data group instantiated as 'PERSON' is related to its context of ClinicalDocument by the informationRecipient participation class. A participant is a person in the role of intendedRecipient (IntendedRecipient class). The entity playing the role is informationRecipient (Person class). The entity identifier of the participant is mapped to the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the informationRecipient.

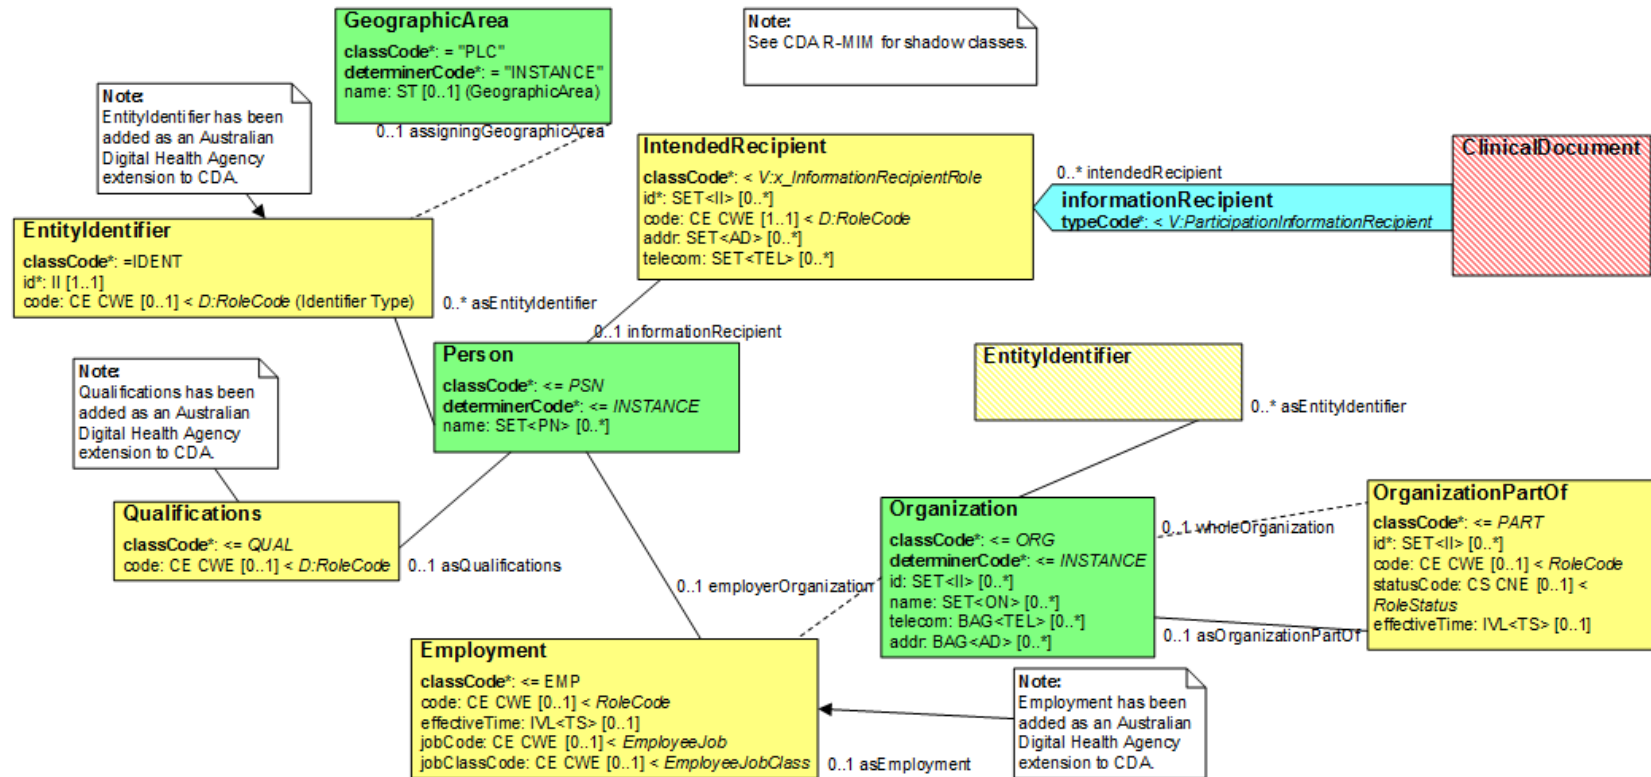

Figure 6.12. INTERESTED PARTY as a PERSON

Figure 6.13 INTERESTED PARTY as a PERSON - ENTITLEMENT shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

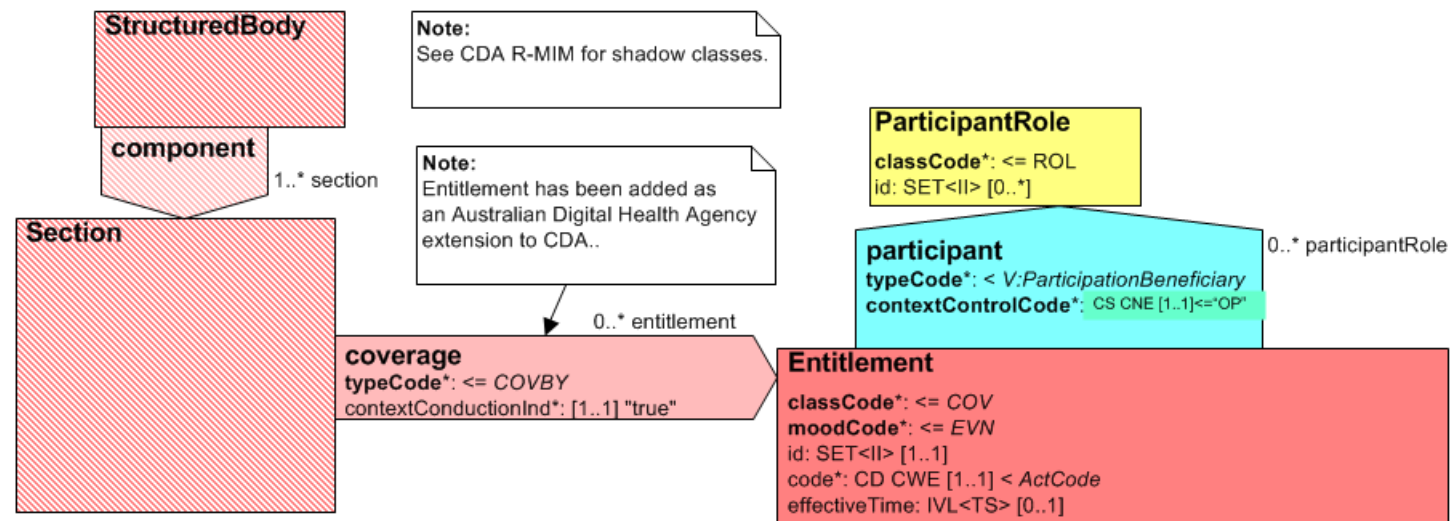

Figure 6.13. INTERESTED PARTY as a PERSON - ENTITLEMENT

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>4</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

## Example 6.9. INTERESTED PARTY as a PERSON - XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## 6.1.5.2 INTERESTED PARTY as an ORGANISATION

### CDA R-MIM Representation

Figure 6.14 INTERESTED PARTY as an ORGANISATION shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Header elements.

The INTERESTED PARTY data group instantiated as 'ORGANISATION' is related to its context of ClinicalDocument by the participant InformationRecipient class. A participant is an organisation in the role of intendedRecipient (IntendedRecipient class). The entity playing the role is receivedOrganization (Organization class). The department/unit name is mapped to receivedOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the wholeOrganization.

# 7 Content Data Specification - CDA Mapping

## 7.1 SERVICE REFERRAL

### Identification

<b>Name</b>	SERVICE REFERRAL
<b>Metadata Type</b>	Structured Document
<b>Identifier</b>	SD-17034

### Relationships

#### Children

Data Type	Name	Occurrence
	SERVICE REFERRAL DETAIL	1..1
	CURRENT SERVICES	0..1
	ADVERSE REACTIONS	0..1
	Medications (MEDICATION ORDERS)	0..1
	Past and Current Medical History (MEDICAL HISTORY)	0..1
	DIAGNOSTIC INVESTIGATIONS	0..1

## CDA R-MIM Representation

Figure 7.1 SERVICE REFERRAL shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

SERVICE REFERRAL is composed of a ClinicalDocument class, which is the entry point into the CDA R-MIM. The ClinicalDocument is associated with the bodyChoice through the component relationship. The StructuredBody class represents a CDA document body that is comprised of one or more document sections.

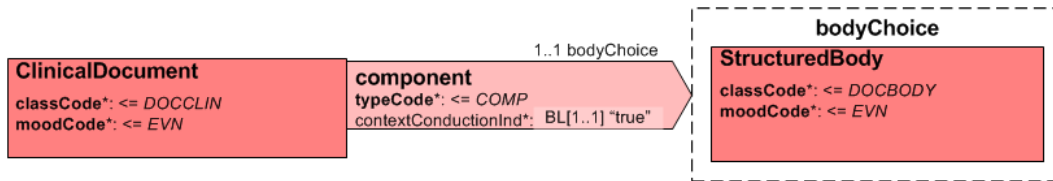

Figure 7.1. SERVICE REFERRAL

## CDA R-MIM Representation

Figure 7.3 REQUESTED SERVICE shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The REQUESTED SERVICE data group is represented by an Act class that is related to its containing Section class by an entry. The moodCode of that Act class represents the Service Booking Status, the code attribute represents Service Category, and the effectiveTime attribute represents Service Commencement Window. Request Urgency is represented by the priorityCode of that Act class.

There are five Act classes related to the containing Act (REQUESTED SERVICE) class by entryRelationships: Reason for Service, Request Urgency Notes, Subject of Care Instruction Description, Request Validity Period, and Requested Service DateTime. Reason for Service Description is represented by the text attribute of its containing Act (Reason for Service) class.

Service Description is represented by an Observation class that is related to its containing Act (REQUESTED SERVICE) class by an entry.

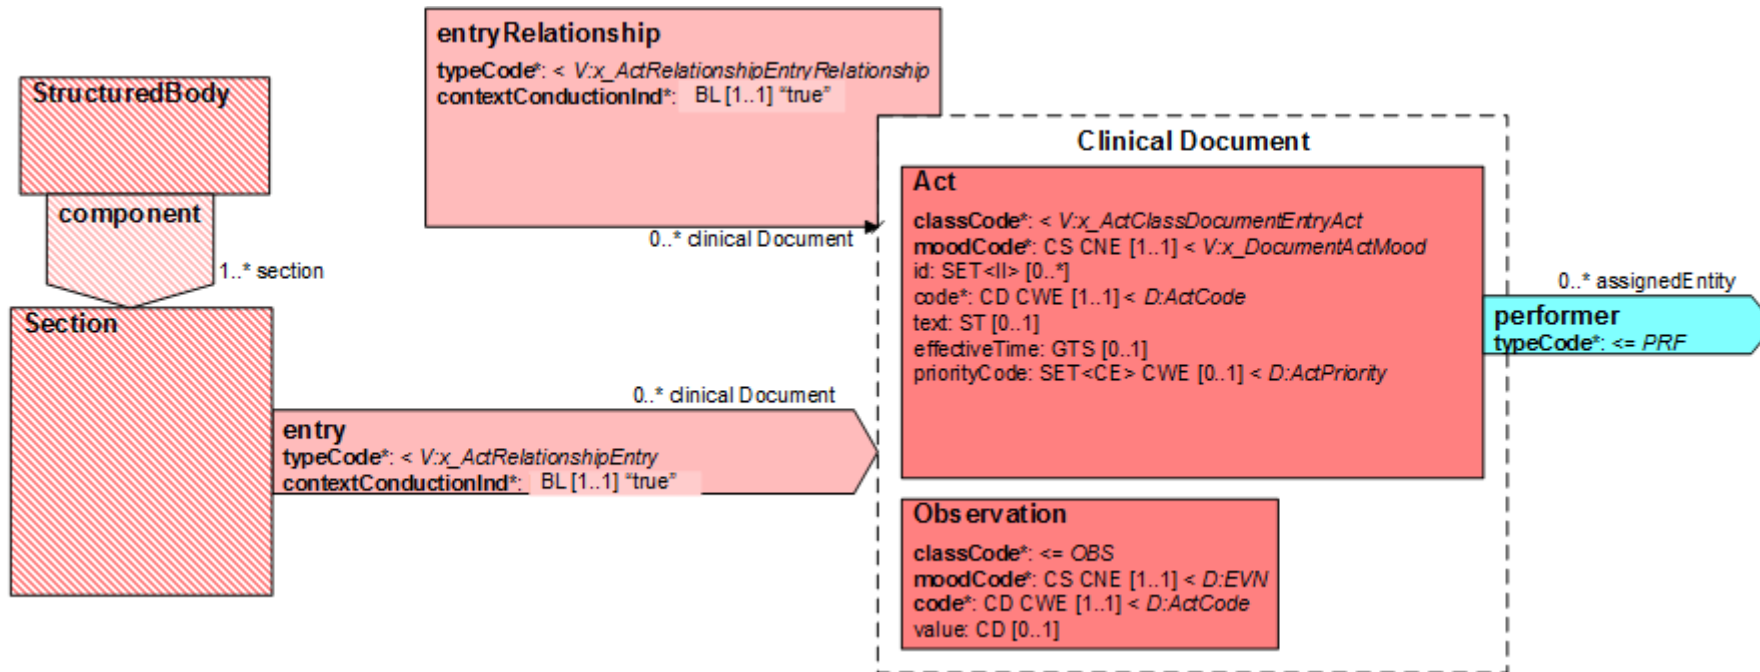

Figure 7.3. REQUESTED SERVICE

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>1</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

REQUESTED SERVICE > <b>Detailed Clinical Model Identifier</b>	Globally unique identifier for this detailed clinical model.	1..1	n/a		Not mapped directly, encompassed implicitly in the combination of entry [service]/act/@moodCode and entry [service]/act/@code.

### Example 7.3. REQUESTED SERVICE XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

### 7.1.1.1.1 SERVICE PROVIDER

#### Identification

<b>Name</b>	SERVICE PROVIDER
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-10296

#### Relationships

##### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">REQUESTED SERVICE</a>	0..1

#### Choices

#### Note

Mentioned below are the possible mutually exclusive 'SERVICE PROVIDER' instantiation choices.

Data Type	Name
	<a href="#">SERVICE PROVIDER as a PERSON</a>
	<a href="#">SERVICE PROVIDER as an ORGANISATION</a>

#### 7.1.1.1.1.1 SERVICE PROVIDER as a PERSON

##### CDA R-MIM Representation

[Figure 7.4 SERVICE PROVIDER as a PERSON](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The SERVICE PROVIDER data group instantiated as 'PERSON' is related to its containing Act class by the performer participation class. A performer is a person in the role of assignedEntity (AssignedEntity class). The entity playing the role is assignedPerson (Person class). The entity identifier of the participant is mapped to the EntityIdentifier class (Australian Digital Health Agency CDA Extension) which is associated to the assignedEntity. Employment detail is mapped to the Australian Digital Health Agency CDA Extension Employment.

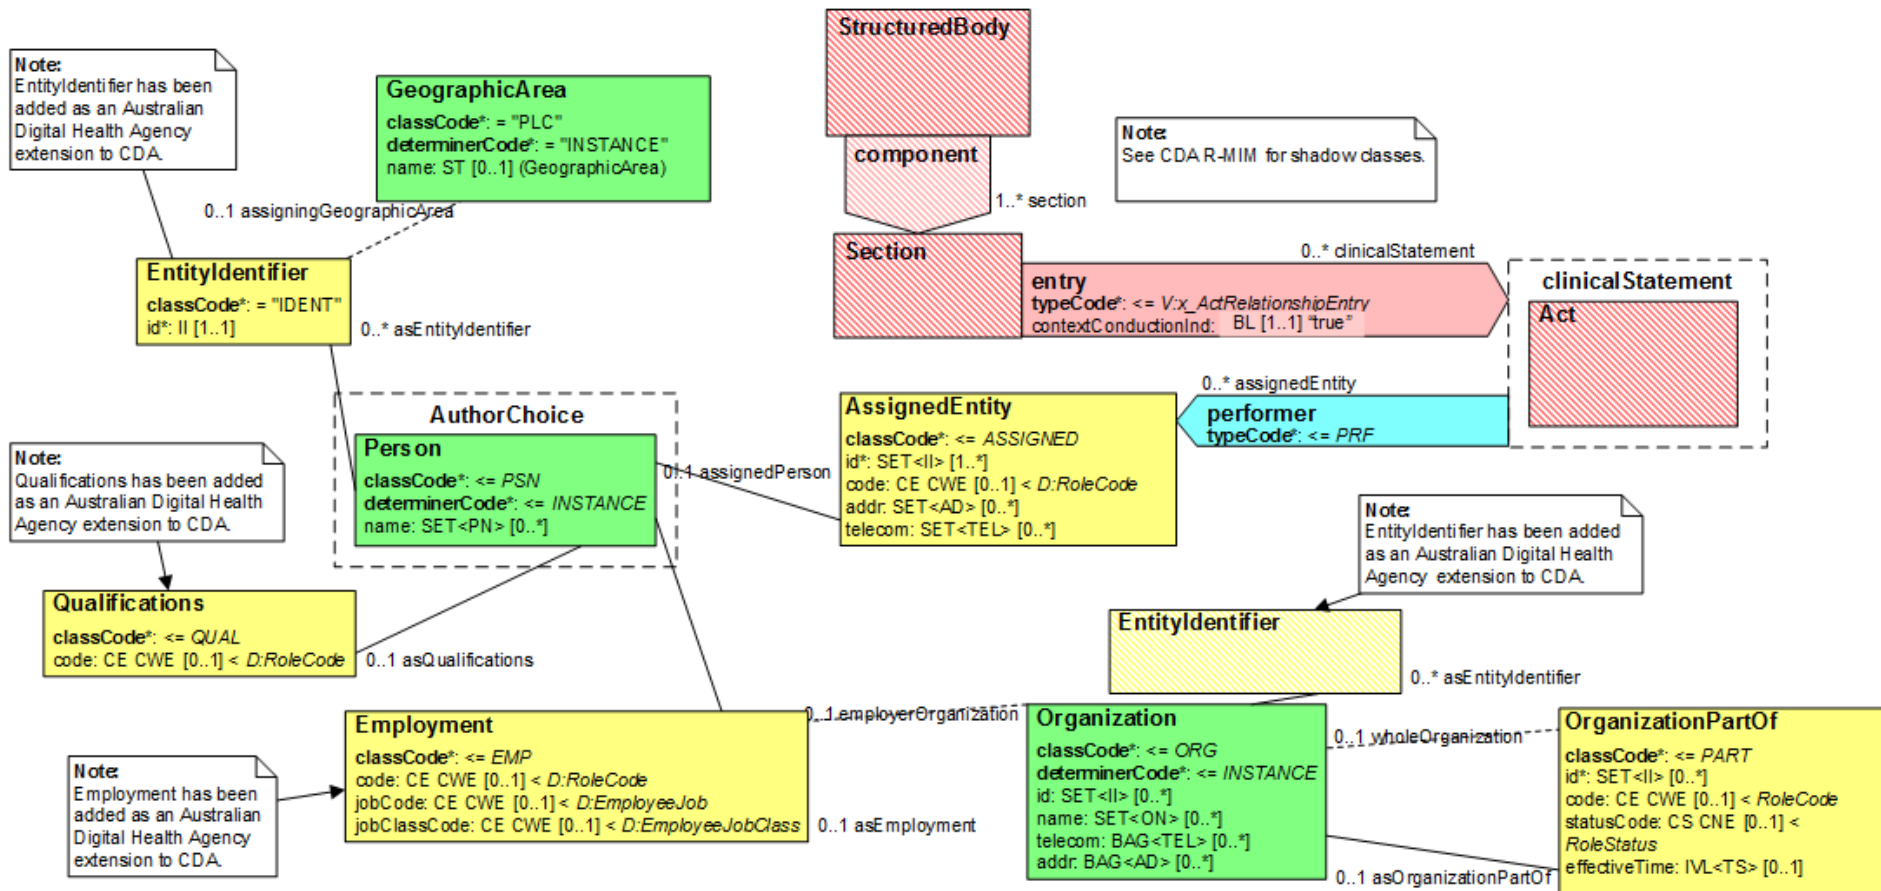

Figure 7.4. SERVICE PROVIDER as a PERSON

Figure 7.5 SERVICE PROVIDER as a PERSON - Entitlement shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

7.1.1.1.2 SERVICE PROVIDER as an ORGANISATION

CDA R-MIM Representation

Figure 7.6 SERVICE PROVIDER as an ORGANISATION shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The SERVICE PROVIDER data group instantiated as 'ORGANISATION' is related to its containing Act class by the participant Performer class. A participant is an organisation in the role of assignedEntity (AssignedEntity class). The entity playing the role is representedOrganization (Organization class). The department/unit name is mapped to representedOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the wholeOrganization.

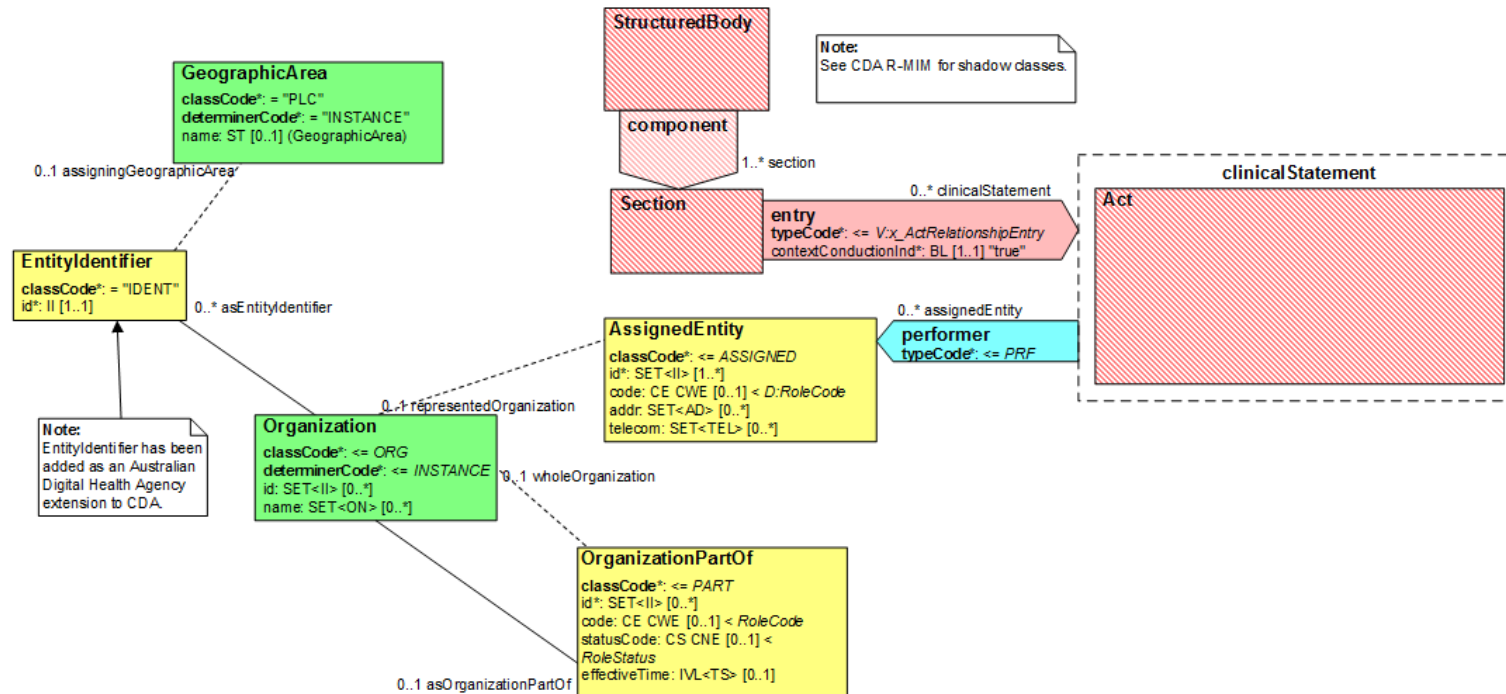

Figure 7.6. SERVICE PROVIDER as an ORGANISATION

## CDA R-MIM Representation

Figure 7.11 Current Service (REQUESTED SERVICE) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Current Service (REQUESTED SERVICE) data group is represented by an Act class that is related to its containing Section class by an entry. The moodCode of that Act class represents the Service Booking Status, and the code attribute represents Service Category.

There are two Act classes related to the containing Act (REQUESTED SERVICE) class by entryRelationships: Service Comment, and Requested Service DateTime.

Service Description is represented by an Observation class that is related to its containing Act (REQUESTED SERVICE) class by an entry.

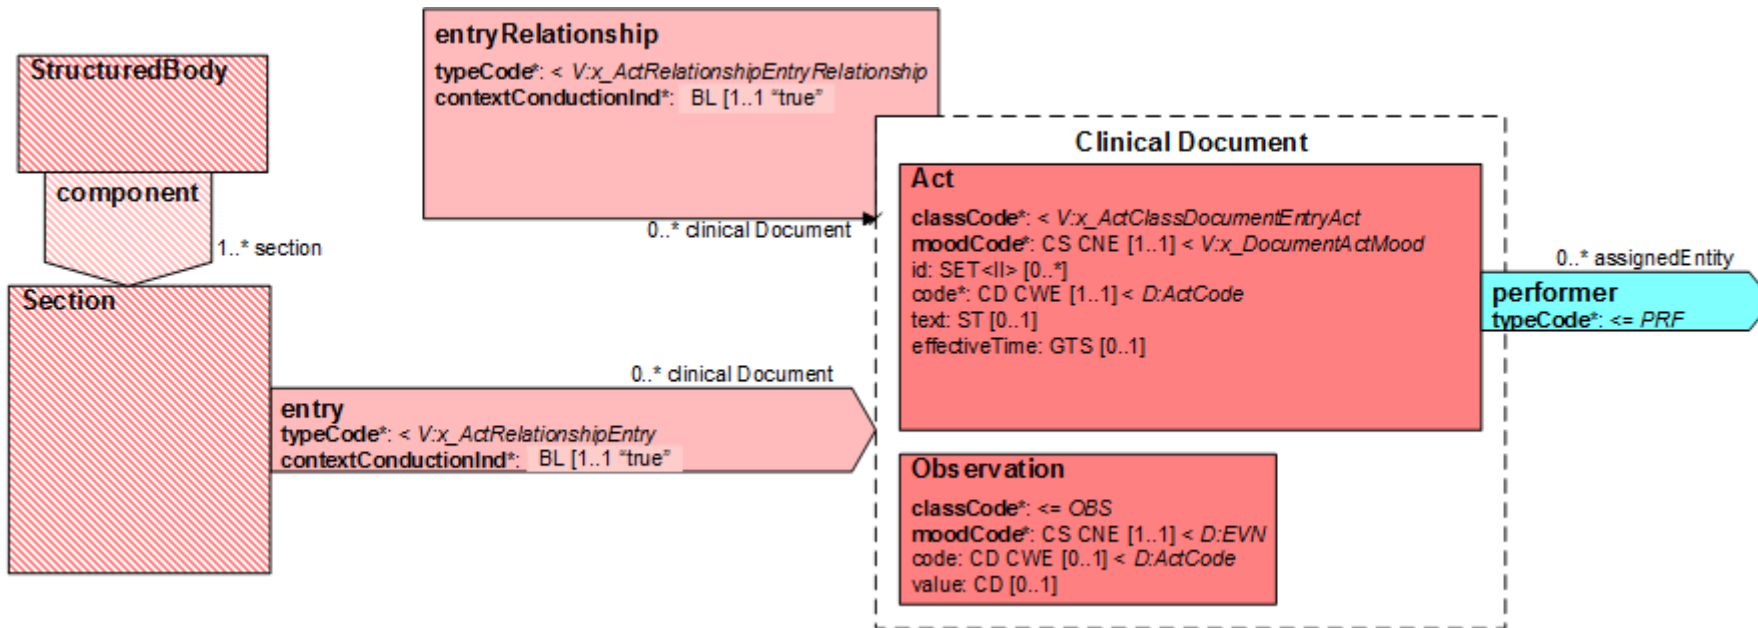

Figure 7.11. Current Service (REQUESTED SERVICE)

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>7</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

CDA R-MIM Representation

Figure 7.12 SERVICE PROVIDER shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The SERVICE PROVIDER data group is related to its containing Act class by the participant Performer class. A participant is an organisation in the role of assignedEntity (AssignedEntity class). The entity playing the role is representedOrganization (Organization class). The department/unit name is mapped to representedOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the wholeOrganization.

## CDA R-MIM Representation

Figure 7.18 Known Medication (MEDICATION INSTRUCTION) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Known Medication (MEDICATION INSTRUCTION) data group is represented by a SubstanceAdministration class that is related to its containing Section class by an entry. The text attribute of that SubstanceAdministration class represents Directions.

Clinical Indication is represented by a reason Act class related to the containing SubstanceAdministration class by an entryRelationship. Medication Instruction Comment is represented by an Act class related the containing SubstanceAdministration class by an entryRelationship. Therapeutic Good Identification is represented by the code attribute of manufacturedMaterial.

## CDA R-MIM Representation

Figure 7.20 PROBLEM/DIAGNOSIS shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The PROBLEM/DIAGNOSIS data group is represented by an Observation class related to its containing Section class by an entry. The value attribute of that Observation class represents Problem/Diagnosis Identification, and the effectiveTime attribute represents Date of Onset.

Date of Resolution/Remission is mapped to an Observation class related to its containing Observation (PROBLEM/DIAGNOSIS) class by an entryRelationship. Problem/Diagnosis Comment is represented by an Act class related to its containing Observation (PROBLEM/DIAGNOSIS) class by an entryRelationship.

## CDA R-MIM Representation

Figure 7.24 [PATHOLOGY TEST RESULT](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The PATHOLOGY TEST RESULT data group is represented by a Section class that is related to its containing Section class by a component. Pathology Test Result Name is represented by an Observation class related to the Section (PATHOLOGY TEST RESULT) class by an entry. The id attribute of that Observation class represents Laboratory Test Result Identifier, and the value attribute represents Test Result Representation.

There are four Observation classes related to the containing Observation (Pathology Test Result Name) class by entryRelationships: Diagnostic Service, Overall Pathology Test Result Status, Pathological Diagnosis, and Observation DateTime. Pathology Test Conclusion is represented by a reference Observation class related to the containing Pathology Test Result Observation class by an entryRelationship.

Clinical Information Provided is represented by an Act class that is related to the containing Observation (Pathology Test Result Name) class by an entryRelationship. Test Comment is represented by an Act class that is related to the containing Pathology Test Result Observation class by an entryRelationship.

TEST REQUEST DETAILS is represented by a subject Act class that is related to the containing Observation (Pathology Test Result Name) class by an entryRelationship. Test Requested Name is represented by an Observation class that is related to its containing Act (TEST REQUEST DETAILS) class by an entryRelationship.

### 7.1.6.1.1 Test Specimen Detail (SPECIMEN)

#### Identification

<b>Name</b>	Test Specimen Detail (SPECIMEN)
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-16156

#### Relationships

##### Parent

Data Type	Name	Occurrences (child within parent)
	PATHOLOGY TEST RESULT	1..*

**CDA R-MIM Representation**

[Figure 7.25 Test Specimen Detail \(SPECIMEN\)](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Test Specimen Detail (SPECIMEN) data group is represented by an Observation class that is related to its containing Observation (Pathology Test Result) class by an entryRelationship. The methodCode attribute of that Observation (SPECIMEN) class represents Collection Procedure, the effectiveTime attribute represents Collection DateTime, and targetSiteCode represents the ANATOMICAL LOCATION data elements.

Specimen Identifier is represented by the id attribute of a specimenRole which is related to its containing Observation (SPECIMEN) class by a specimen participation. PHYSICAL PROPERTIES OF AN OBJECT is represented by a specimenPlayingEntity of the containing specimenRole. The code attribute of that specimenPlayingEntity represents Specimen Tissue Type, the quantity attribute represents Weight or Volume, and the desc attribute represents Object Description. Container Identifier is represented by the Container Australian Digital Health Agency CDA extension.

Anatomical Location Image and Image are both represented by a supporting ObservationMedia class related to the containing Observation (SPECIMEN) class by an entryRelationship.

There are four component Observation classes related to the containing Observation (SPECIMEN) class by entryRelationships: Sampling Preconditions, Collection Setting, DateTime Received, and Parent Specimen Identifier.

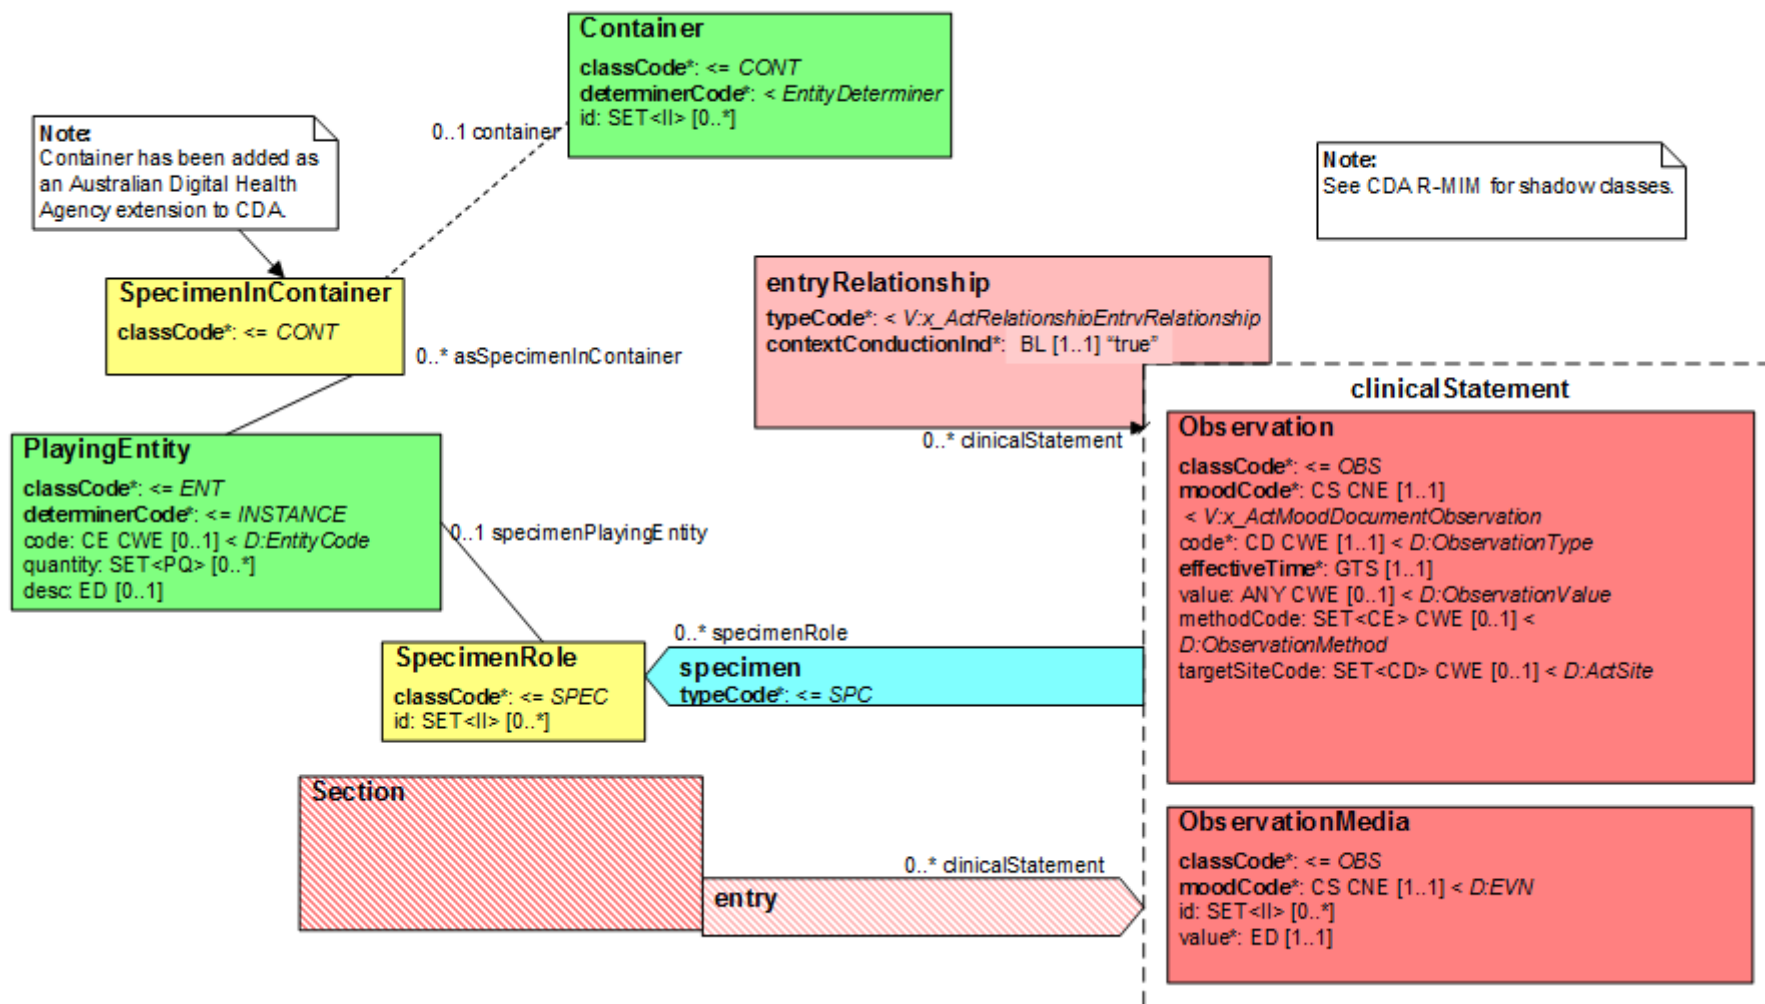

Figure 7.25. Test Specimen Detail (SPECIMEN)

CDA Mapping

**Note**

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>9</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

## Example 7.24. Test Specimen Detail (SPECIMEN) XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## CDA R-MIM Representation

[Figure 7.26 Result Group \(PATHOLOGY TEST RESULT GROUP\)](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

Result Group (PATHOLOGY TEST RESULT GROUP) is represented by an Organizer class related to its containing Observation class by an entryRelationship. The code attribute of that Organizer class represents Pathology Test Result Group Name.

Each INDIVIDUAL PATHOLOGY TEST RESULT data group is represented by an Observation class related to the containing Organizer class by a component. The code attribute of that Observation (INDIVIDUAL PATHOLOGY TEST RESULT) class represents Individual Pathology Test Result Name and the value attribute represents Individual Pathology Test Result Value.

There are two Act classes related to the containing Observation (INDIVIDUAL PATHOLOGY TEST RESULT) class by an entryRelationship: Individual Pathology Test Result Comment and Individual Pathology Test Result Reference Range Guidance. Individual Pathology Test Result Status is represented by an Observation class related to the containing Observation (INDIVIDUAL PATHOLOGY TEST RESULT) class by an entryRelationship.

**CDA R-MIM Representation**

Figure 7.27 Individual Pathology Test Result Value Reference Ranges (REFERENCE RANGE DETAILS) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The REFERENCE RANGE DETAILS data group is represented by an ObservationRange class that is related to its containing Observation class by a referenceRange relationship. Normal Status is represented by the interpretationCode attribute of the containing Observation class. The code attribute of the ObservationRange class represents Reference Range Meaning, and the value attribute represents Reference Range.

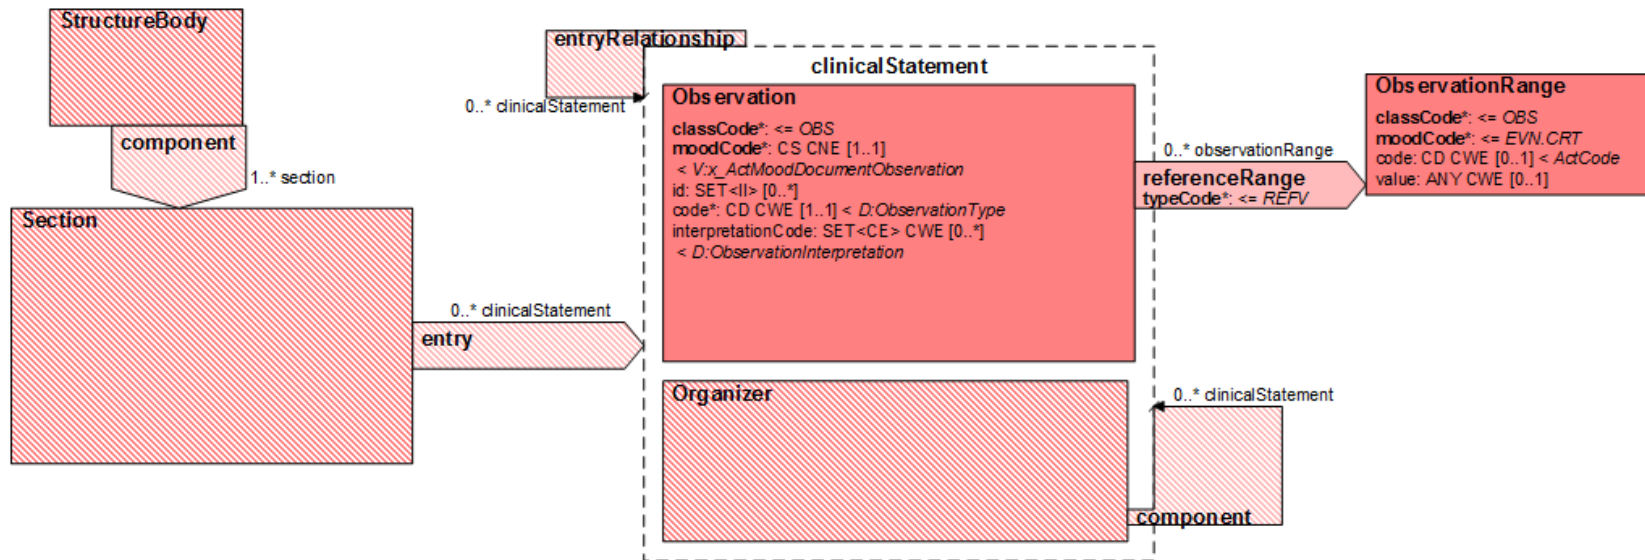

Figure 7.27. Individual Pathology Test Result Value Reference Ranges (REFERENCE RANGE DETAILS)

CDA Mapping

**Note**

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>10</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

## CDA R-MIM Representation

[Figure 7.28 Result Group Specimen Detail \(SPECIMEN\)](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Result Group Specimen Detail (SPECIMEN) data group is represented by an Observation class that is related to its containing Section class by a component. The methodCode attribute of that Observation (SPECIMEN) class represents Collection Procedure, the effectiveTime attribute represents Collection DateTime, and targetSiteCode represents the ANATOMICAL LOCATION data elements.

Specimen Identifier is represented by the id attribute of a specimenRole which is related to its containing Observation (Pathology Test Result Name) class by a specimen participation. PHYSICAL PROPERTIES OF AN OBJECT is represented by a specimenPlayingEntity of the containing specimenRole. The code attribute of that specimenPlayingEntity represents Specimen Tissue Type, the quantity attribute represents Weight or Volume, and the desc attribute represents Object Description. Container Identifier is represented by the Container Australian Digital Health Agency CDA extension.

Anatomical Location Image and Image are both represented by a supporting ObservationMedia class related to the containing Observation (SPECIMEN) class by an entryRelationship.

There are four component Observation classes related to the containing Observation (SPECIMEN) class by entryRelationships: Sampling Preconditions, Collection Setting, DateTime Received, and Parent Specimen Identifier.

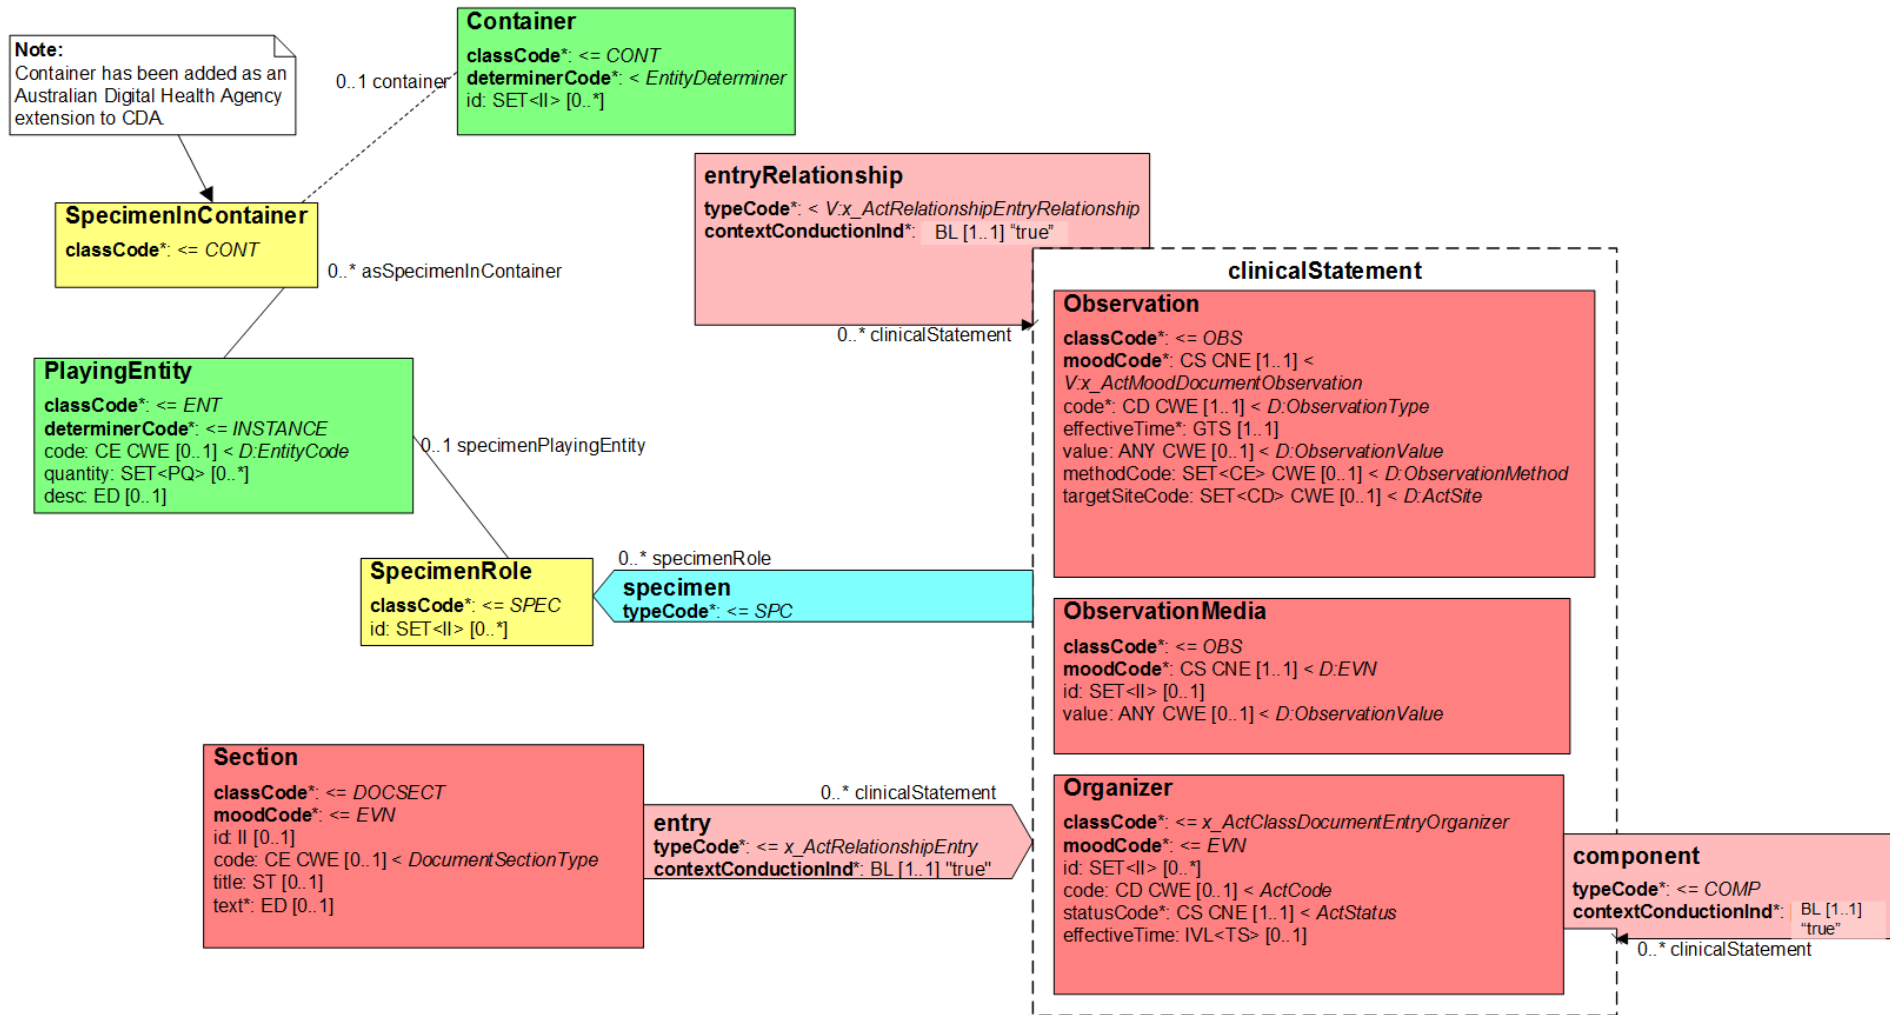

Figure 7.28. Result Group Specimen Detail (SPECIMEN)

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>11</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

**Example 7.27. Result Group Specimen Detail (SPECIMEN) XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## CDA R-MIM Representation

[Figure 7.29 IMAGING EXAMINATION RESULT](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The IMAGING EXAMINATION RESULT data group is represented by a Section class that is related to its containing Section class by a component. Imaging Examination Result Name is represented by an Observation class related to the Section (IMAGING EXAMINATION RESULT) class by an entry. The methodCode attribute of that Observation class represents Imaging Modality, the text attribute represents Examination Result Representation, and targetSiteCode represents the ANATOMICAL LOCATION data elements.

Anatomical Location Image and Image are both represented by a supporting ObservationMedia class related to the containing Observation (Imaging Examination Result Name) class by an entryRelationship.

There are three Observation classes related to the containing Observation (Imaging Examination Result Name) class: Observation DateTime, Findings, and Imaging Examination Result Status. Clinical Information Provided is represented by an Act class that is related to the containing Observation (Imaging Examination Result Name) class by an entryRelationship.

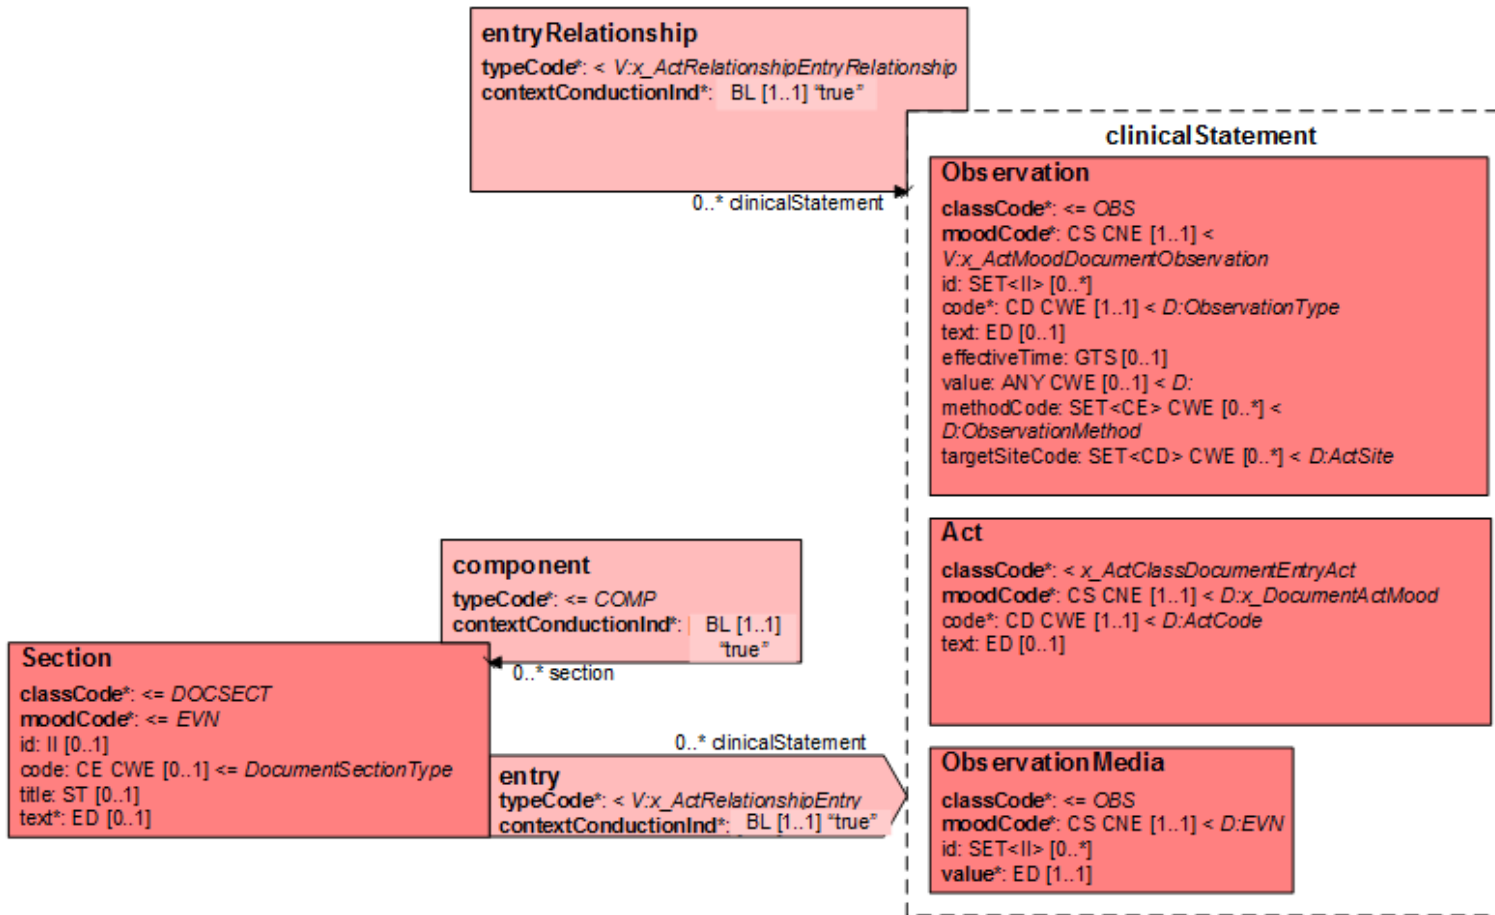

Figure 7.29. IMAGING EXAMINATION RESULT

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>12</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

## Example 7.28. IMAGING EXAMINATION RESULT XML Fragment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

### 7.1.6.2.1 Result Group (IMAGING EXAMINATION RESULT GROUP)

#### Identification

<b>Name</b>	Result Group (IMAGING EXAMINATION RESULT GROUP)
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-16504

#### Relationships

##### Parent

Data Type	Name	Occurrences (child within parent)
	<a href="#">IMAGING EXAMINATION RESULT</a>	0..*

##### Children

Data Type	Name	Occurrence
	<a href="#">Imaging Examination Result Value Reference Ranges (REFERENCE RANGE DETAILS)</a>	0..1

## CDA R-MIM Representation

[Figure 7.30 Result Group \(IMAGING EXAMINATION RESULT GROUP\)](#) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Result Group (IMAGING EXAMINATION RESULT GROUP) is represented by an Organizer class related to its containing Observation class by an entryRelationship. The code attribute of that Organizer class represents Imaging Examination Result Group Name.

Each INDIVIDUAL IMAGING EXAMINATION RESULT data group is represented by an Observation class related to the containing Organizer class by a component. The code attribute of that Observation (INDIVIDUAL IMAGING EXAMINATION RESULT) class represents Individual Imaging Examination Result Name, the value attribute represents Individual Imaging Examination Result Value, and targetSiteCode represents the ANATOMICAL LOCATION data elements. Result Comment is represented by an Act class that is related to the containing Observation (Imaging Examination Result Name) class by an entryRelationship.

Anatomical Location Image and Image are both represented by a supporting ObservationMedia class related to the containing Observation (Imaging Examination Result Name) class by an entryRelationship.

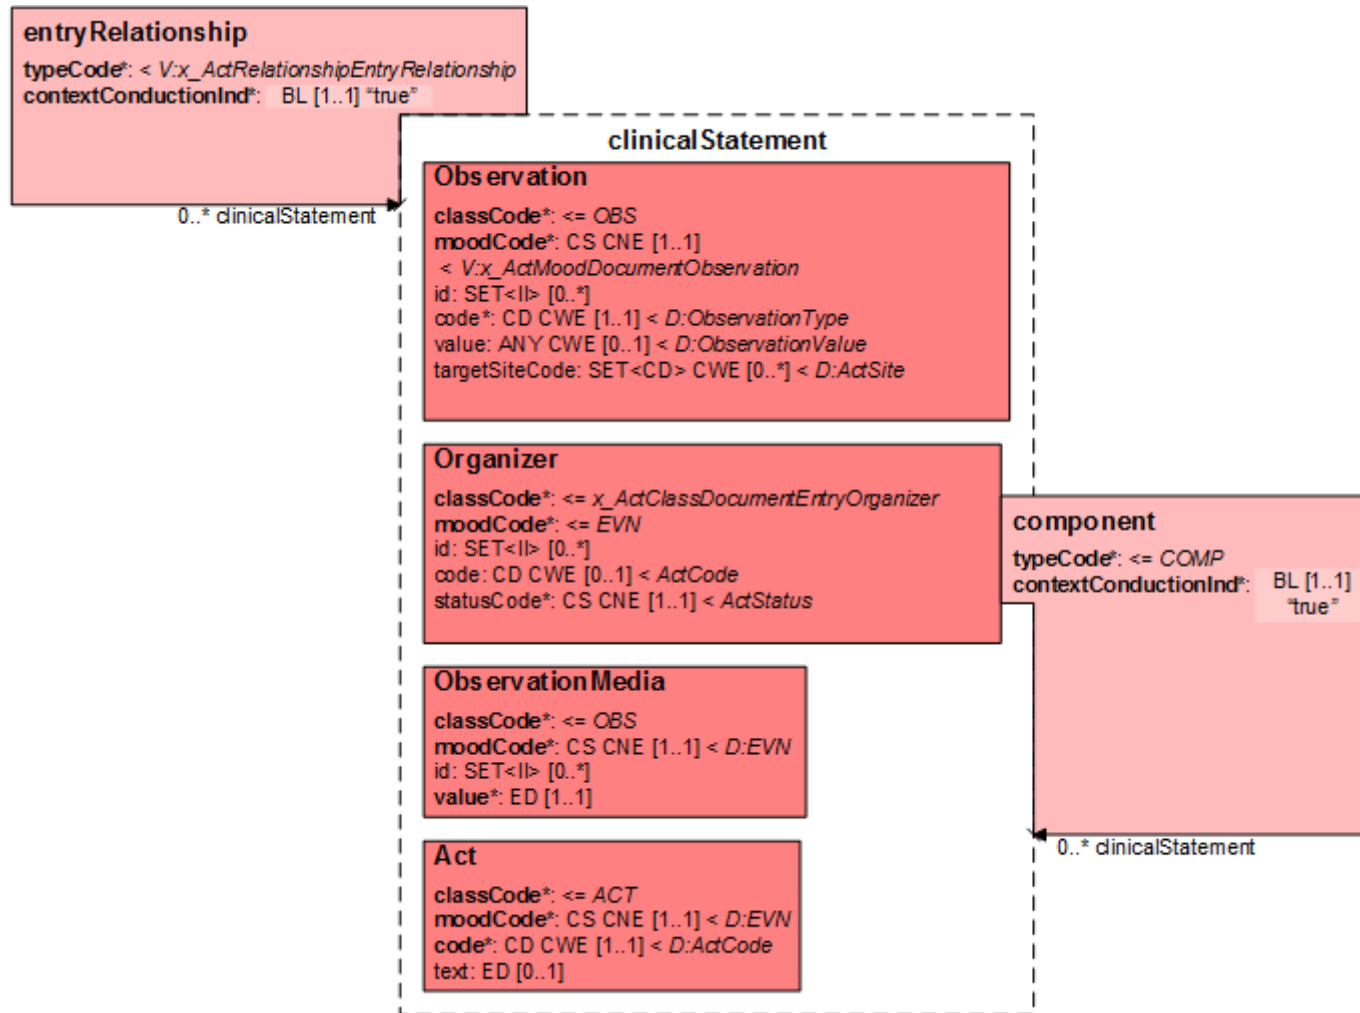

Figure 7.30. Result Group (IMAGING EXAMINATION RESULT GROUP)

CDA Mapping

**Note**

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>13</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

**Example 7.29. Result Group (IMAGING EXAMINATION RESULT GROUP) XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

**CDA R-MIM Representation**

Figure 7.31 Imaging Examination Result Value Reference Ranges (REFERENCE RANGE DETAILS) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The REFERENCE RANGE DETAILS data group is represented by an ObservationRange class that is related to its containing Observation class by a referenceRange relationship. Normal Status is represented by the interpretationCode attribute of the containing Observation class. The code attribute of the ObservationRange class represents Reference Range Meaning, and the value attribute represents Reference Range.

**Figure 7.31. Imaging Examination Result Value Reference Ranges (REFERENCE RANGE DETAILS)**

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>14</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

Data Type	Name	Occurrences (child within parent)
	IMAGING EXAMINATION RESULT	0..*

## CDA R-MIM Representation

Figure 7.32 EXAMINATION REQUEST DETAILS shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The EXAMINATION REQUEST DETAILS data group is represented by an Act class related to its containing Observation class by an entryRelationship. Examination Requested Name is represented by a reference Observation class related to the containing Act class by an entryRelationship. DICOM Study Identifier is represented by a subject Act class related to the containing Act class by an entryRelationship. Report Identifier is represented by a component Observation class related to the containing Act class by an entryRelationship.

IMAGE DETAILS is represented by an Observation class related to its containing Act (DICOM Study Identifier) class by an entryRelationship. The id attribute of that Observation (IMAGE DETAILS) class represents Image Identifier, the value attribute represents Image View Name and the effectiveTime attribute represents Image DateTime. DICOM Series Identifier is represented by a reference Act class that is related to its containing Observation (IMAGE DETAILS) class by an entryRelationship. Subject Position is represented by a reference Act class that is related to its containing Observation (IMAGE DETAILS) class by an entryRelationship. Image is represented by an ObservationMedia class related to its containing Observation (IMAGE DETAILS) class by an entryRelationship.

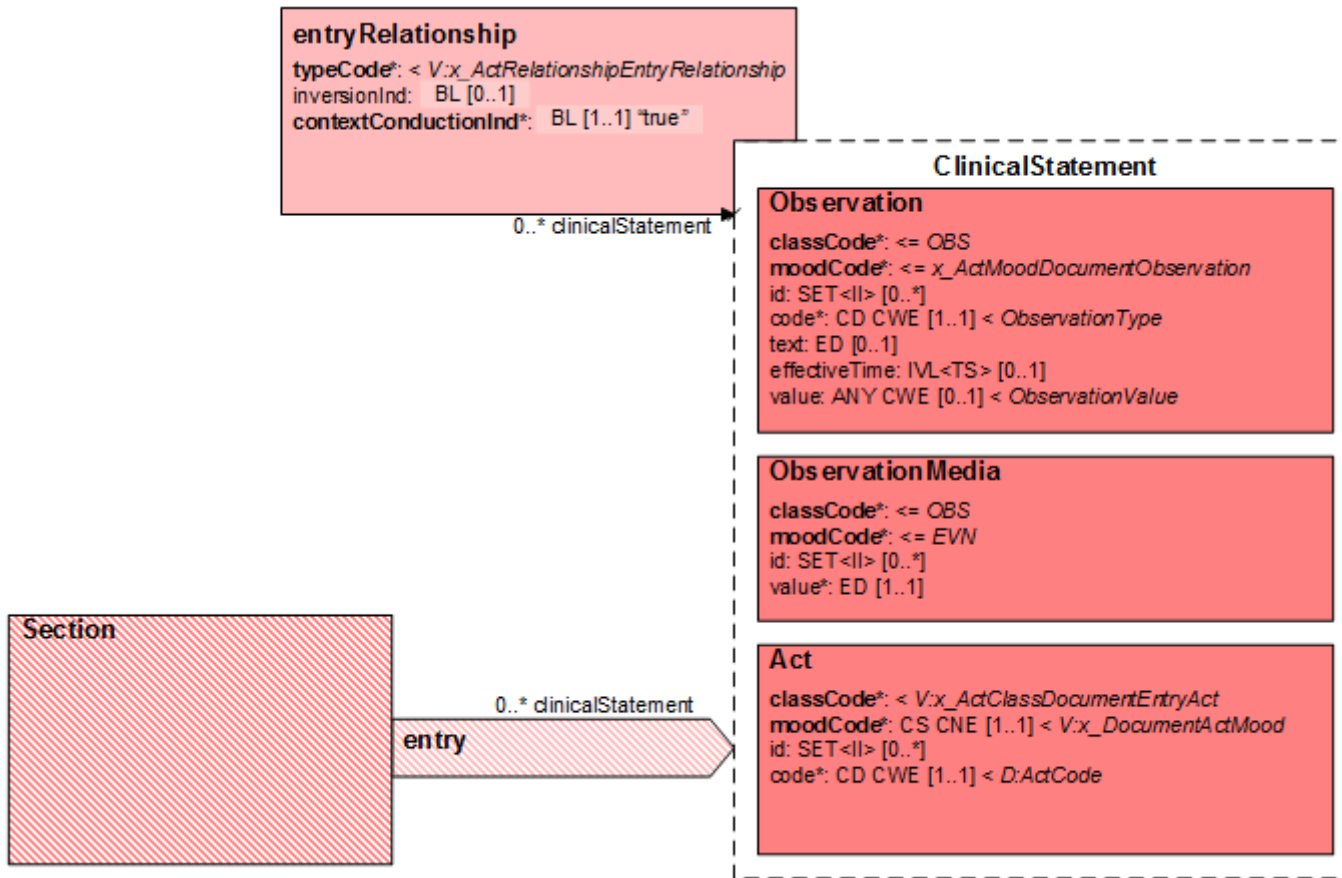

Figure 7.32. EXAMINATION REQUEST DETAILS

CDA Mapping

**Note**

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>15</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

**Example 7.31. EXAMINATION REQUEST DETAILS XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

### 7.1.6.3 Pending Diagnostic Investigation (REQUESTED SERVICE)

#### Identification

<b>Name</b>	Pending Diagnostic Investigation (REQUESTED SERVICE)
<b>Metadata Type</b>	Data Group
<b>Identifier</b>	DG-20158

#### Relationships

##### Parent

Data Type	Name	Occurrences (child within parent)
	DIAGNOSTIC INVESTIGATIONS	0..*

##### Children

Data Type	Name	Occurrence
	SERVICE PROVIDER	0..1

## CDA R-MIM Representation

Figure 7.33 Pending Diagnostic Investigation (REQUESTED SERVICE) shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The Pending Diagnostic Investigation (REQUESTED SERVICE) data group is represented by an Act class that is related to its containing Section class by an entry. The moodCode of that Act class represents the Service Booking Status, the code attribute represents Service Category, and the effectiveTime attribute represents Service Commencement Window.

There are three Act classes related to the containing Act (REQUESTED SERVICE) class by entryRelationships: Reason for Service, Subject of Care Instruction Description, and Requested Service DateTime. Reason for Service Description is represented by the text attribute of its containing Act (Reason for Service) class.

Service Description is represented by an Observation class that is related to its containing Act (REQUESTED SERVICE) class by an entry.

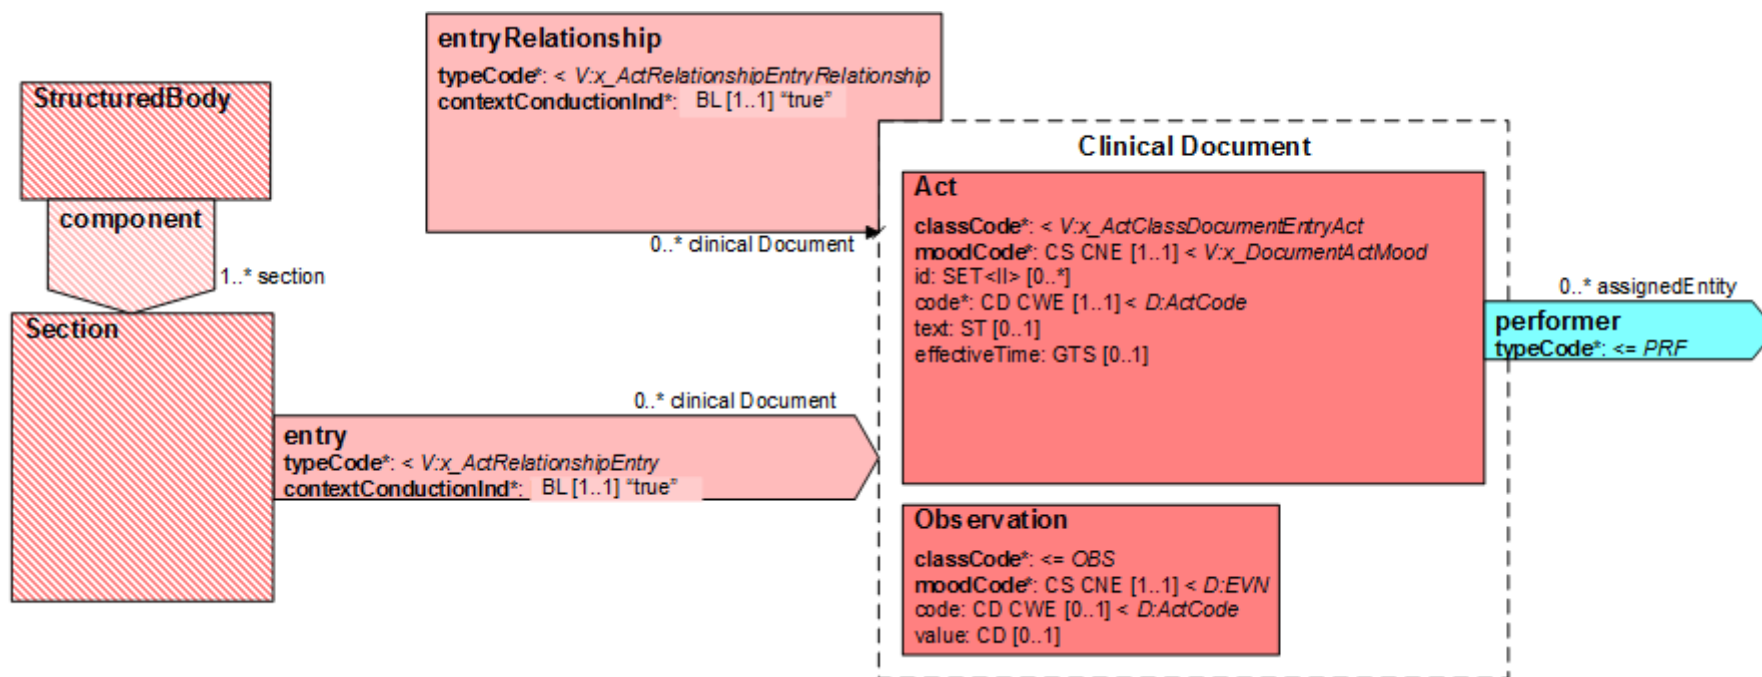

Figure 7.33. Pending Diagnostic Investigation (REQUESTED SERVICE)

## CDA Mapping

### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>16</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

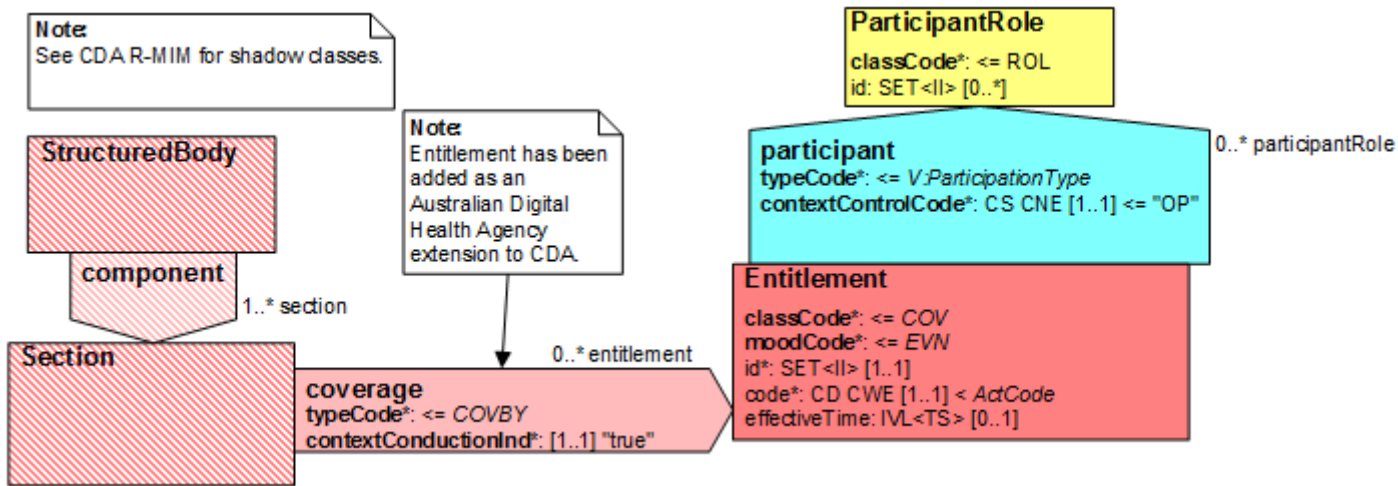

Figure 7.35. SERVICE PROVIDER as a PERSON - ENTITLEMENT

## CDA Mapping

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Body Level 3 Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[diag_inv]/section/entry[pend_serv]/act/		
<b>SERVICE PROVIDER</b>	Provider (individual or organisation) to whom the subject of care is being referred.	0..1	performer[serv_prov]		
SERVICE PROVIDER > <b>Participation Period</b>	The time interval during which the participation in the healthcare event occurred.	0..0	performer[serv_prov]/time		
SERVICE PROVIDER > <b>LOCATION OF PARTICIPATION</b>	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a> .		LOCATION OF PARTICIPATION is not currently mapped.
SERVICE PROVIDER > <b>Participation Type</b>	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	performer[serv_prov]/@typeCode="PRF"	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Referee".	
SERVICE PROVIDER > <b>Role</b>	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	performer[serv_prov]/assignedEntity/code	Role <b>SHOULD</b> have a value chosen from <a href="#">1220.0 - ANZSCO - Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1 [ABS2009]</a> .  However, if a suitable value in this set cannot be found, then any code set that is both registered with HL7 and publicly available <b>MAY</b> be used.	See <code> for available attributes.
n/a	n/a	1..1	performer[serv_prov]/assignedEntity/id		Required CDA element.  See <id> for available attributes.
SERVICE PROVIDER > <b>PARTICIPANT</b>	Details pertinent to the identification of an individual or organisation or device that has participated in a healthcare event/encounter/clinical interaction.	1..1	performer[serv_prov]/assignedEntity/assignedPerson		
SERVICE PROVIDER > PARTICIPANT > <b>Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	1..*	performer[serv_prov]/assignedEntity/assignedPerson/<Entity Identifier>		See common pattern: <a href="#">Entity Identifier</a> .

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
SERVICE PROVIDER > PARTICIPANT > <b>ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	0..*	performer[serv_prov]/assignedEntity/< <a href="#">Address</a> >	AUSTRALIAN OR INTERNATIONAL ADDRESS <b>SHALL</b> be instantiated as an AUSTRALIAN ADDRESS.  Address Purpose (addr/@use) <b>SHALL</b> be set to Business (see <a href="#">AS 5017-2006: Health Care Client Identifier Address Purpose</a> ).	See common pattern: <a href="#">Address</a> .
SERVICE PROVIDER > PARTICIPANT > <b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	0..*	performer[serv_prov]/assignedEntity/< <a href="#">Electronic Communication Detail</a> >	Electronic Communication Usage Code (telecom/@use) <b>SHALL</b> be set to Workplace (see <a href="#">HL7: TelecommunicationAddressUse</a> ).	See common pattern: <a href="#">Electronic Communication Detail</a> .
SERVICE PROVIDER > PARTICIPANT > <b>PERSON OR ORGANISATION OR DEVICE</b>	Represents a choice to be made at run-time between PERSON, ORGANISATION or DEVICE.	1..1	n/a	PERSON OR ORGANISATION OR DEVICE <b>SHALL</b> be instantiated as a PERSON.	This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > <b>PERSON</b>	An individual who is in the role of healthcare provider, who uses or is a potential user of a healthcare service, or is in some way related to, or a representative of, a subject of care (patient).	1..1	n/a		Not mapped directly, encompassed implicitly in performer[serv_prov]/assignedEntity/assignedPerson.
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>PERSON NAME</b>	The appellation by which an individual may be identified separately from any other within a social context.	1..*	performer[serv_prov]/assignedEntity/assignedPerson/< <a href="#">Person Name</a> >		See common pattern: <a href="#">Person Name</a> .
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>Relationship to Subject of Care</b>	The relationship of a participant to a subject of care (patient).	0..0	performer[serv_prov]/assignedEntity/assignedPerson/ <b>ext:personalRelationship</b>		
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>EMPLOYMENT DETAIL</b>	A person's occupation and employer.	1..1	performer[serv_prov]/assignedEntity/assignedPerson/< <a href="#">Employment</a> >		See common pattern: <a href="#">Employment</a> .

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > PERSON > <b>DEMOGRAPHIC DATA</b>	Additional characteristics of a person that may be useful for identification or other clinical purposes.	0..0	n/a		This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
			performer[serv_prov]/assignedEntity/assignedPerson/ext:administrativeGenderCode		
			performer[serv_prov]/assignedEntity/assignedPerson/ext:birthTime		
<b>CDA Body Level 3 Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[admin_obs]/section/ (See <a href="#">4 Administrative Observations</a> )		
SERVICE PROVIDER > PARTICIPANT > <b>ENTITLEMENT</b>	The entitlement or right of a participant to act in a given capacity (as defined by Entitlement Type) within a healthcare context.	0..*	ext:coverage2[serv_prov]/@typeCode="COVBY"		
			ext:coverage2[serv_prov]/ext:entitlement		
			ext:coverage2[serv_prov]/ext:entitlement/@classCode="COV"		
			ext:coverage2[serv_prov]/ext:entitlement/@moodCode="EVN"		
			ext:coverage2[serv_prov]/ext:entitlement/ext:participant/@typeCode="HLD"		
			ext:coverage2[serv_prov]/ext:entitlement/ext:participant/ext:participantRole/@classCode="ASSIGNED"		
			ext:coverage2[serv_prov]/ext:entitlement/ext:participant/ext:participantRole/ext:id		This <b>SHALL</b> hold the same value as performer[serv_prov]/assignedEntity/id.
SERVICE PROVIDER > PARTICIPANT > ENTITLEMENT > <b>Entitlement Number</b>	A number or code issued for the purpose of identifying the entitlement or right of a participant to act in a given capacity (as defined by Entitlement Type) within a healthcare context.	1..1	ext:coverage2[serv_prov]/ext:entitlement/ext:id		See <id> for available attributes.
SERVICE PROVIDER > PARTICIPANT > ENTITLEMENT > <b>Entitlement Type</b>	The description of the scope of an entitlement.	1..1	ext:coverage2[serv_prov]/ext:entitlement/ext:code	<a href="#">NCTIS: Admin Codes - Entitlement Type</a>	See <code> for available attributes.
SERVICE PROVIDER > PARTICIPANT > ENTITLEMENT > <b>Entitlement Validity Duration</b>	The time interval for which an entitlement is valid.	0..1	ext:coverage2[serv_prov]/ext:entitlement/ext:effectiveTime		See <time> for available attributes.
<b>CDA Body Level 3 Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[diag_inv]/section/entry[pend_serv]/act/		
SERVICE PROVIDER > PARTICIPANT > <b>Qualifications</b>	A list of professional certifications, and certificates recognising having passed a course.	0..1	performer[serv_prov]/assignedEntity/assignedPerson/ext:asQualifications		See Australian Digital Health Agency CDA extension: <a href="#">Qualifications</a> .  Qualifications is a text field, so the text list is entered in the original-Text field of the code element.
			performer[serv_prov]/assignedEntity/assignedPerson/ext:asQualifications/@classCode="QUAL"		
			performer[serv_prov]/assignedEntity/assignedPerson/ext:asQualifications/ext:code/originalText		

**Example 7.33. SERVICE PROVIDER as a PERSON XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

7.1.6.3.1.2 SERVICE PROVIDER as an ORGANISATION

CDA R-MIM Representation

Figure 7.36 SERVICE PROVIDER as an ORGANISATION shows a subset of the CDA R-MIM containing those classes being referred to in the CDA Mapping. This data component maps to CDA Body elements.

The SERVICE PROVIDER data group instantiated as 'ORGANISATION' is related to its containing Act class by the participant Performer class. A participant is an organisation in the role of assignedEntity (AssignedEntity class). The entity playing the role is representedOrganization (Organization class). The department/unit name is mapped to representedOrganization.name and the organisation name is mapped to the wholeOrganization (Organization class) which represents a whole-part relationship using the OrganizationPartOf role. The organisation entity identifier is represented by the EntityIdentifier class (Australian Digital Health Agency CDA extension) which is associated to the wholeOrganization.

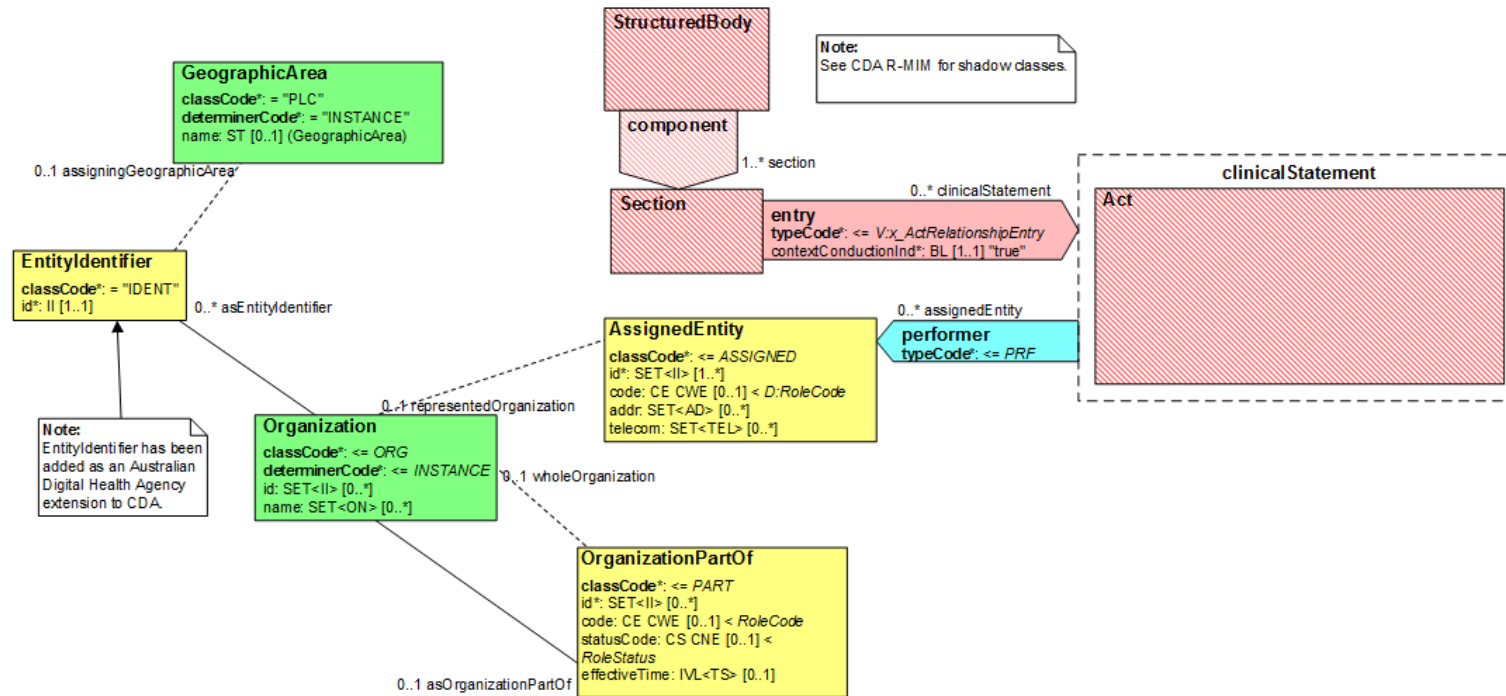

Figure 7.36. SERVICE PROVIDER as an ORGANISATION

## CDA Mapping

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Body Level 3 Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[diag_inv]/section/entry[pend_serv]/act/		
<b>SERVICE PROVIDER</b>	Provider (individual or organisation) to whom the subject of care is being referred.	0..1	performer[serv_prov_org]		
SERVICE PROVIDER > <b>Participation Period</b>	The time interval during which the participation in the healthcare event occurred.	0..0	performer[serv_prov_org]/time		See common pattern: <a href="#">time</a> .
SERVICE PROVIDER > <b>LOCATION OF PARTICIPATION</b>	Specifies the geographic site (building, room, etc) where the participation of a healthcare event occurs.	0..0	See <a href="#">Known Issues</a>		LOCATION OF PARTICIPATION is not currently mapped.
SERVICE PROVIDER > <b>Participation Type</b>	The categorisation of the nature of the participant's involvement in the healthcare event described by this participation.	1..1	performer[serv_prov_org]/@typeCode="PRF"	Participation Type <b>SHALL</b> have an implementation-specific value equivalent to "Referee".	
SERVICE PROVIDER > <b>Role</b>	The involvement or role of the participant in the related action from a healthcare perspective rather than the specific participation perspective.	1..1	performer[serv_prov_org]/assignedEntity/code	Role <b>SHOULD</b> have a value representing the type of Facility e.g. Hospital, Clinic, Community Service Centre, Home care/housekeeping assistance.	See <code> for available attributes.
n/a	n/a	1..1	performer[serv_prov_org]/assignedEntity/id		Required CDA element. See <id> for available attributes.
SERVICE PROVIDER > <b>PARTICIPANT</b>	Details pertinent to the identification of an individual or organisation or device that has participated in a healthcare event/encounter/clinical interaction.	1..1	performer[serv_prov_org]/assignedEntity/representedOrganization		
SERVICE PROVIDER > PARTICIPANT > <b>Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	1..*	performer[serv_prov_org]/assignedEntity/representedOrganization/asOrganizationPartOf/wholeOrganization/<Entity Identifier>		See common pattern: <a href="#">Entity Identifier</a> .
SERVICE PROVIDER > PARTICIPANT > <b>ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	0..*	performer[serv_prov_org]/assignedEntity/<Address>	AUSTRALIAN OR INTERNATIONAL ADDRESS <b>SHALL</b> be instantiated as an AUSTRALIAN ADDRESS.	See common pattern: <a href="#">Address</a> .
SERVICE PROVIDER > PARTICIPANT > <b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	1..*	performer[serv_prov_org]/assignedEntity/<Electronic Communication Detail>		See common pattern: <a href="#">Electronic Communication Detail</a> .

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE	Represents a choice to be made at run-time between PERSON, ORGANISATION or DEVICE.	1..1	n/a	PERSON OR ORGANISATION OR DEVICE <b>SHALL</b> be instantiated as a ORGANISATION.	This logical data component has no mapping to CDA.  The cardinality of this component propagates to its children.
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > ORGANISATION	Any organisation of interest to, or involved in, the business of healthcare service provision.	1..1	n/a		Not mapped directly, encompassed implicitly in performer[serv_prov_org]/assignedEntity/representedOrganization.
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > ORGANISATION > Organisation Name	The name by which an organisation is known or called.	1..1	performer[serv_prov_org]/assignedEntity/representedOrganization/asOrganizationPartOf/wholeOrganization/ <b>name</b>		
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > ORGANISATION > Department/Unit	The name by which a department or unit within a larger organisation is known or called.	0..1	performer[serv_prov_org]/assignedEntity/representedOrganization/ <b>name</b>		
SERVICE PROVIDER > PARTICIPANT > PERSON OR ORGANISATION OR DEVICE > ORGANISATION > Organisation Name Usage	The classification that enables differentiation between recorded names for an organisation or service location.	0..1	performer[serv_prov_org]/assignedEntity/representedOrganization/asOrganizationPartOf/wholeOrganization/ <b>name/@use</b>	AS 4846-2006: Health Care Provider Organisation Name Usage	
<b>CDA Body Level 3 Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[admin_obs]/section/ (See <a href="#">4 Administrative Observations</a> )		
SERVICE PROVIDER > PARTICIPANT > ENTITLEMENT	The entitlement or right of a participant to act in a given capacity (as defined by Entitlement Type) within a healthcare context.	0..0	See <a href="#">Known Issues</a>		Prohibition of ENTITLEMENT is not currently mapped.
<b>CDA Header Data Elements</b>			Context: /ClinicalDocument/component/structuredBody/component[diag_inv]/section/entry[pend_serv]/act/		
SERVICE PROVIDER > PARTICIPANT > Qualifications	A list of professional certifications, and certificates recognising having passed a course.	0..0	n/a		This logical data component has no mapping to CDA.

**Example 7.34. SERVICE PROVIDER as an ORGANISATION XML Fragment**

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

# 8 Common Patterns

## 8.1 code

The <code> element pattern refines the kind of act being recorded. It is of data type CD CWE (Concept Descriptor, Coded With Extensibility). It may have:

- a null attribute (*nullFlavor*)
- *originalText*
- *code* and *codeSystem*
- *qualifier* (CD)
- *translation* (CD)
- any combination of the above.

A *displayName* is highly recommended.

Where used, the *code* attribute **SHALL** contain a code from the relevant vocabulary.

Where used, the *codeSystem* attribute **SHALL** contain the OID for the relevant vocabulary. Values for coding systems can be obtained from the HL7 OID registry accessible from the HL7 home web page at [www.hl7.org](http://www.hl7.org)<sup>1</sup>.

Where used, the *displayName* attribute **SHALL** contain a human-readable description of the code value that is provided by the code system; *displayName* is a case insensitive value except where explicitly stated otherwise by the code system. A preferred interface term for display that is not a member of the description set supplied by the code system **SHALL NOT** be used to populate the *displayName* attribute.

The *codeSystemName* **MAY** be present and, where used, **SHALL** contain a human-readable name for the coding system.

Where used, the *originalText* element **SHALL** be used to carry the full text associated with this code as selected by, typed by or displayed to the author of this statement including the contents of the *qualifier* if present.

---

<sup>1</sup> <http://www.hl7.org>

Where used, the *qualifier* element **SHALL** carry a code from the same code system as the code; for example if the main concept code is from SNOMED CT the *qualifier* also has to be taken from SNOMED CT as the use of a different code system for a *qualifier* is not allowed. The use of the *qualifier* element is governed by the code system used and cannot be used with code systems that do not provide for qualifiers (e.g. pre-coordinated systems).

Codes can be obtained from a variety of sources. Additional vocabularies are also available from the HL7 Version 3 Vocabulary tables, available to HL7 members through the HL7 web site. In some cases, the vocabularies have been specified; in others, a particular code has been fixed or there is no vocabulary specified. For guidance on coding common clinical concepts in CDA documents see [Representing Coding in CDA Documents Implementation Guidance \[NEHT2011bv\]](#).

Where a code is used from a different code system to that specified, or where the code lies outside the reference set specified, or where a code system or reference set is not specified, the code value **SHALL** be consistent with the meaning of the associated data component from the structured content specification.

If a vocabulary is specified in this implementation guide and no suitable code can be found, the *originalText* element **SHALL** be used to carry the full text as selected by, typed by or displayed to the author of this statement.

If a vocabulary is specified in this implementation guide and it is not possible to use this vocabulary, but an alternate vocabulary is in use, the *originalText* element **SHALL** be used to carry the full text as selected by, typed by or displayed to the author of this statement. The *code* element **SHALL** be used to carry the relevant information from the alternate vocabulary and the alternate vocabulary **SHALL** be registered with HL7 and allocated an appropriate OID.

If an alternate vocabulary is in use and a translation into the specified code system is available, the *originalText* element **SHALL** be used to carry the full text as selected by, typed by or displayed to the author of this statement. The *code* element **SHALL** be used to carry the relevant information from the alternate vocabulary and the alternate vocabulary **SHALL** be registered with HL7 and allocated an appropriate OID. The *translation* element **SHALL** be used to indicate the translation code from the specified vocabulary.

### Example 8.1. code

```
<!-- Specified code system in use -->
<code
  code="271807003"
  codeSystem="2.16.840.1.113883.6.96"
  codeSystemName="SNOMED CT"
  codeSystemVersion="20101130"
  displayName="Skin rash" />

<!-- Specified code system in use with a qualifier -->
<code
  code="23986001"
  codeSystem="2.16.840.1.113883.6.96"
  codeSystemName="SNOMED CT"
  displayName="Glaucoma" >
  <originalText>Glaucoma, left</originalText>
  <qualifier>
    <name
      code="272741003"
      codeSystem="2.16.840.1.113883.6.96"
      codeSystemName="SNOMED CT"
      displayName="Laterality" />
    <value
      code="7771000"
```

```
        codeSystem="2.16.840.1.113883.6.96"  
        codeSystemName="SNOMED CT"  
        displayName="Left"  
        xsi:type="CD" />  
    </qualifier>  
</code>  
  
<!-- Alternate code system in use and a translation into the specified code system is available -->  
<code  
    code="J45.9"  
    codeSystem="2.16.840.1.113883.6.135"  
    codeSystemName="icd10am"  
    displayName="Asthma, unspecified">  
    <originalText>Asthma</originalText>  
    <translation  
        code="195967001"  
        codeSystem="2.16.840.1.113883.6.96"  
        codeSystemName="SNOMED CT"  
        displayName="Asthma" />  
</code>  
  
<!-- Alternate code system in use and no translation into the specified code system is available -->  
<code  
    code="J45.9"  
    codeSystem="2.16.840.1.113883.6.135"  
    codeSystemName="icd10am"  
    displayName="Asthma, unspecified">  
    <originalText>Asthma</originalText>  
</code>  
  
<!-- No suitable code can be found or there is no code system in use -->  
<code  
    <originalText>Asthma</originalText>  
</code>
```

## 8.2 id

The <id> element pattern is of data type II (Instance Identifier). The II data type may have:

- a null attribute (*nullFlavor*)
- a *root*
- a *root* and an *extension*
- a *root* and an *extension* and an *assigningAuthorityName*
- a *root* and an *assigningAuthorityName*
- a *root* and an *assigningAuthorityName* and a *displayable*
- a *root* and an *extension* and a *displayable*
- a *root* and an *extension* and an *assigningAuthorityName* and a *displayable*
- a *root* and a *displayable*

The root attribute is **REQUIRED** and is a unique identifier that guarantees the global uniqueness of the instance identifier. The root alone **MAY** be the entire instance identifier. The root attribute **SHALL** be a UUID or OID.

The extension attribute **MAY** be present, and is a character string as a unique identifier within the scope of the identifier root.

In the case of Entity Identifier, assigningAuthorityName is **RECOMMENDED**.

Identifiers appear in this implementation guide for two different reasons. The first is that the identifier has been identified in the business requirements as relevant to the business process. These identifiers are documented in the SCSs, which make clear the meaning of this identifier.

In addition, the implementation makes clear that identifiers may also be found on many other parts of the CDA content model. These identifiers are allowed to facilitate record matching across multiple versions of related documents, so that the same record can consistently be identified, in spite of variations in the information as the record passes through time or between systems. These identifiers have no meaning in the business specification. If senders provide one of these identifiers, it **SHALL** always be the same identifier in all versions of the record, and it **SHALL** be globally unique per the rules of the II data type.

### Example 8.2. id

```
<id root="2.16.840.1.113883.19" extension="123A45" />
```

```
<ext:id assigningAuthorityName="HPI-O" root="1.2.36.1.2001.1003.0.8003621566684455" />
```

## 8.3 time

When a time value is supplied it **SHALL** include hours and minutes.

When a time value is supplied it **MAY** include seconds and fractions of seconds.

When a time value is supplied it **SHALL** include a time zone.

The <time> element pattern is of data type TS (Point in Time) and can also be an interval between two times (IVL\_TS), representing a period of time. Both forms can either have a nullFlavor attribute or child components following allowed patterns.

A simple timestamp (point in time) will only contain a value attribute containing the time value, expressed as a series of digits as long as required or as available.

### Example 8.3. Simple timestamp

```
<time value="20091030" />
```

This represents "October 30, 2009" to calendar day precision. In cases where the containing element is defined in the CDA schema as "ANY" data type, it is useful to provide an xsi:type attribute, set to the value "TS".

The period of time pattern is defined in terms of one or both of its lowest and highest values. The low and high elements are instances of the timestamp pattern described above. More complex time period concepts can be expressed by combining a high, low, or centre element with a width element.

### Example 8.4. Low time

```
<period>  
  <low value="20091030" />  
</period>
```

This represents "a period after October 30, 2009". In cases where the containing element is defined in the CDA schema as "ANY" data type, it is useful to provide an xsi:type attribute, set to the value "IVL\_TS", as in the next example.

### Example 8.5. Interval timestamp 1

```
<period xsi:type="IVL_TS">  
  <high value="200910301030+1000" />  
</period>
```

This represents "a period before 10:30 a.m. UTC+10, October 30, 2009". A discretionary xsi:type attribute has been provided to explicitly cast the pattern to "IVL\_TS".

#### Example 8.6. Interval timestamp 2

```
<period xsi:type="IVL_TS">  
  <low value="2007" />  
  <high value="2009" />  
</period>
```

This represents "the calendar years between 2007 and 2009". The low element **SHALL** precede the high element. As per the previous example, a discretionary xsi:type attribute has been provided to explicitly cast the pattern to "IVL\_TS".

#### Example 8.7. Width time

```
<period>  
  <high value="20091017" />  
  <width value="2" unit="wk" />  
</period>
```

This expresses "two weeks before October 17th, 2009". A low value can be derived from this.

## 8.4 Entity Identifier

### CDA Mapping

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Data Elements</b>					
<b>Entity Identifier</b>	A number or code issued for the purpose of identifying a participant within a healthcare context.	The cardinality of the group comes from the linking parent and the cardinality of the children data elements comes from the R-MIM diagram.	<b>ext:asEntityIdentifier</b>		See Australian Digital Health Agency CDA extension: <a href="#">EntityIdentifier</a> .
			ext:asEntityIdentifier/@classCode="IDENT"		
			ext:asEntityIdentifier/ext:id		
			ext:asEntityIdentifier/ext:id/@root	Attribute @root <b>SHALL</b> be used, <b>SHALL</b> be an OID and <b>SHALL NOT</b> be a UUID.  Attribute @root <b>SHALL</b> be a globally unique object identifier (i.e. OID) that identifies the combination of geographic area, issuer and type. If no such OID exists, it <b>SHALL</b> be defined before any identifiers can be created.	
			ext:asEntityIdentifier/ext:id/@extension	Attribute @extension <b>MAY</b> be used and, if it is used, <b>SHALL</b> be a unique identifier within the scope of the root that is populated directly from the designation.	
			ext:asEntityIdentifier/ext:id/@assigningAuthorityName	Attribute @assigningAuthorityName <b>SHOULD</b> be used and, if it is used, <b>SHALL</b> be a human-readable name for the namespace represented in the root that is populated with the issuer, or identifier type, or a concatenation of both as appropriate. This <b>SHOULD NOT</b> be used for machine readability purposes.	
			ext:asEntityIdentifier/ext:code		See <code> for available attributes.
			ext:asEntityIdentifier/ext:assigningGeographicArea		
			ext:asEntityIdentifier/ext:assigningGeographicArea/@classCode="PLC"		
ext:asEntityIdentifier/ext:assigningGeographicArea/ext:name	Element ext:name <b>MAY</b> be used and, if it is used, <b>SHALL</b> be the range and extent that the identifier applies to the object with which it is associated that is populated directly from the geographic area. This <b>SHOULD NOT</b> be used for machine readability purposes.  Element ext:name <b>SHALL</b> be populated with one of the following values sourced from <a href="#">AS 5017 (2006) – Health Care Client Identification [SA2006b]</a> : "Local Client (Unit Record) Identifier", "Area/Region/District Identifier", "State or Territory Identifier", "National Identifier".				

## Example 8.8. Entity Identifier

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

```
<!-- person -->

## 8.7 Electronic Communication Detail

### CDA Mapping

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Data Elements</b>					
<b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	Cardinality comes from linking parent.	<b>telecom</b>		
ELECTRONIC COMMUNICATION DETAIL > <b>Electronic Communication Medium</b>	A code representing a type of communication mechanism.	1..1	telecom/ <b>@value</b>	<a href="#">AS 5017-2006: Health Care Client Electronic Communication Medium</a> > HL7:URLScheme	Makes up part of the value attribute as ' <b>tel:phone number</b> ', ' <b>mailto:email address</b> ', ' <b>http:URL</b> ', etc.
ELECTRONIC COMMUNICATION DETAIL > <b>Electronic Communication Usage Code</b>	The manner of use that is applied to an electronic communication medium.	0..1	telecom/ <b>@use</b>	<a href="#">HL7: TelecommunicationAddressUse</a> > HL7:TelecommunicationAddressUse	Space separated list of codes.  The section <a href="#">AS 5017-2006: Health Care Client Electronic Communication Usage Code</a> explains how to map AS 5017-2006 to HL7 TelecommunicationAddressUse (HL7 TAU) code.
ELECTRONIC COMMUNICATION DETAIL > <b>Electronic Communication Address</b>	A unique combination of characters used as input to electronic telecommunication equipment for the purpose of contacting an entity.	1..1	telecom/ <b>@value</b>		Makes up part of the value attribute as ' <b>tel:phone number</b> ', ' <b>mailto:email address</b> ', ' <b>http:URL</b> ', etc.

**Example 8.11. Electronic Communication Detail**

```
<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only.
Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid.
While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and
may not be indicative of the expected values in a clinical document.
While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema,
the specification or schema will take precedence. -->

<telecom value="mailto:clincial@clinician.com" use="H" />
```

## 8.8 Employment

### CDA Mapping

#### Note

NS = In the absence of national standard code sets, the code sets used **SHALL** be registered code sets, i.e. registered through the [HL7 code set registration procedure](#)<sup>2</sup> with an appropriate object identifier (OID), and **SHALL** be publicly available.

When national standard code sets become available, they **SHALL** be used and the non-standard code sets **SHALL** be deprecated.

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
<b>CDA Data Elements</b>					
EMPLOYMENT DETAIL	A person's occupation and employer.	Cardinality comes from linking parent.	n/a		This logical data component has no mapping to CDA.
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION	The organisation that the individual is working for in respect to the role they are playing in the nominated participation.	1..*	<b>ext:asEmployment/ext:employerOrganization</b> ext:asEmployment/@classCode="EMP"		There is a known issue in the Participation Data Specification [DH2017a] for this logical data component's cardinality.  Furthermore the corresponding CDA elements ext:asEmployment and ext:employerOrganization do not allow the cardinality to be multiple. The cardinality range <b>SHALL</b> be interpreted as '1..1'.
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > Entity Identifier	A number or code issued for the purpose of identifying a participant within a healthcare context.	1..*	ext:asEmployment/ext:employerOrganization/asOrganizationPartOf/wholeOrganization/<Entity Identifier>		See common pattern: <a href="#">Entity Identifier</a> .

<sup>2</sup> <http://www.hl7.org/oid/index.cfm?ref=footer>

SCS Data Component	Data Component Definition	Card	CDA Schema Data Element	Vocab	Comments
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > <b>ADDRESS</b>	The description of a location where an entity is located or can be otherwise reached or found and a description of the purpose for which that address is primarily used by that entity.	0..*	ext:asEmployment/ext:employerOrganization/asOrganizationPartOf/wholeOrganization/<Address>	AUSTRALIAN OR INTERNATIONAL ADDRESS <b>SHALL</b> be instantiated as an AUSTRALIAN ADDRESS.  Address Purpose (addr/@use) <b>SHOULD</b> be set to Business (see <a href="#">AS 5017-2006: Health Care Client Identifier Address Purpose</a> ).	See common pattern: <a href="#">Address</a> .
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > <b>ELECTRONIC COMMUNICATION DETAIL</b>	The electronic communication details of entities.	1..*	ext:asEmployment/ext:employerOrganization/asOrganizationPartOf/wholeOrganization/<Electronic Communication Detail>	Electronic Communication Usage Code (telecom/@use) <b>SHOULD</b> be set to Workplace (see <a href="#">HL7: TelecommunicationAddressUse</a> ).	See common pattern: <a href="#">Electronic Communication Detail</a> .
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > <b>ORGANISATION</b>	Any organisation of interest to, or involved in, the business of healthcare service provision.	1..1	n/a		Not mapped directly, encompassed implicitly in assignedAuthor/ext:asEmployment/employerOrganization.
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > ORGANISATION > <b>Organisation Name</b>	The name by which an organisation is known or called.	1..1	ext:asEmployment/ext:employerOrganization/asOrganizationPartOf/wholeOrganization/name		
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > ORGANISATION > <b>Department/Unit</b>	The name by which a department or unit within a larger organisation is known or called.	0..1	ext:asEmployment/ext:employerOrganization/name		
EMPLOYMENT DETAIL > EMPLOYER ORGANISATION > ORGANISATION > <b>Organisation Name Usage</b>	The classification that enables differentiation between recorded names for an organisation or service location.	0..1	ext:asEmployment/ext:employerOrganization/asOrganizationPartOf/wholeOrganization/name/@use	<a href="#">AS 4846-2006: Health Care Provider Organisation Name Usage</a>	
EMPLOYMENT DETAIL > <b>Employment Type</b>	The basis on which the person is employed by the employer organisation.	0..1	ext:asEmployment/ext:jobClassCode	NS	
EMPLOYMENT DETAIL > <b>Occupation</b>	A descriptor of the class of job based on similarities in the tasks undertaken.	0..*	ext:asEmployment/ext:jobCode	<a href="#">1220.0 - ANZSCO - Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1 [ABS2009]</a>	The corresponding CDA element ext:jobCode does not allow the cardinality to be '0..*/multiple. The cardinality <b>SHALL</b> be interpreted as '0..1' instead of '0..*'.
EMPLOYMENT DETAIL > <b>Position In Organisation</b>	A descriptor of the job or the job role based on the management hierarchy of the organisation.	0..1	ext:asEmployment/ext:code	NS	

## Example 8.12. Employment

<!-- This XML fragment is provided to demonstrate an example instance of each structured element in the CDA Mapping table. It is illustrative only. Logical model constraints on allowed combinations of child components are ignored in order to provide coverage of structured elements. This fragment cannot be treated as clinically valid. While the values in the fragment are conformant with the CDA Mapping table they are typically exaggerated to highlight the semantic meaning of the structured elements and may not be indicative of the expected values in a clinical document. While every effort has been taken to ensure that the examples are consistent with the message specification, where there are conflicts with the written message specification or schema, the specification or schema will take precedence. -->

## 9 Australian Digital Health Agency CDA Extensions

As part of the CDA, standard extensions are allowed as follows:

Locally-defined markup may be used when local semantics have no corresponding representation in the CDA specification. CDA seeks to standardize the highest level of shared meaning while providing a clean and standard mechanism for tagging meaning that is not shared. In order to support local extensibility requirements, it is permitted to include additional XML elements and attributes that are not included in the CDA schema. These extensions should not change the meaning of any of the standard data items, and receivers must be able to safely ignore these elements. Document recipients must be able to faithfully render the CDA document while ignoring extensions.

Extensions may be included in the instance in a namespace other than the HL7v3 namespace, but must not be included within an element of type ED (e.g., <text> within <procedure>) since the contents of an ED datatype within the conformant document may be in a different namespace. Since all conformant content (outside of elements of type ED) is in the HL7 namespace, the sender can put any extension content into a foreign namespace (any namespace other than the HL7 namespace). Receiving systems must not report an error if such extensions are present. "HL7 Clinical Document Architecture, Release 2" [\[HL7CDAR2\]](#)

As such the following extensions have been defined where Australian concepts were not represented in CDA.

This section is provided for clarity only. Please see the relevant mappings section where these extensions have been used for actual mapping details.

### 9.1 ClinicalDocument.completionCode

Figure 9.1 [ClinicalDocument.completionCode](#) shows a subset of the CDA R-MIM containing those classes with the relevant Australian Digital Health Agency CDA extension represented.

Figure 9.1. ClinicalDocument.completionCode

## 9.2 Multiple Birth

Figure 9.2 Multiple Birth shows a subset of the CDA R-MIM containing those classes with the relevant Australian Digital Health Agency CDA extension represented.

## 10 Vocabularies and Code Sets

This product includes all or a portion of the HL7 Vocabulary, or is derived from the HL7 Vocabulary, subject to a license from Health Level Seven International. Your use of the HL7 Vocabulary also is subject to this license, a copy of which is accessible through the following link: <http://www.hl7.org/permalink/?VocabTables>. The current complete HL7 Vocabulary is also available through this link. The HL7 Vocabulary is copyright © 1989-2010, Health Level Seven International. All rights reserved. THE HL7 VOCABULARY IS PROVIDED "AS IS." ANY EXPRESS OR IMPLIED WARRANTIES ARE DISCLAIMED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

When using the following vocabulary tables, if one column in the code set table is bolded, use the code in that column, otherwise use the values in all columns.

### Example 10.1. One value

```
<name use="L">
  {name}
</name>
```

### Example 10.2. All values

```
<code
  code="103.16044.4.1.1"
  codeSystem="1.2.36.1.2001.1001"
  codeSystemName="NCTIS Data Components"
  displayName="Additional Comments" />
```

## 10.1 HL7: TelecommunicationAddressUse

Code	Value
H	Home
HP	Primary Home
HV	Vacation Home
WP	Workplace
AS	Answering Service
EC	Emergency Contact

<b>Code</b>	<b>Value</b>
<b>MC</b>	Mobile Contact
<b>PG</b>	Pager

## 10.2 AS 5017-2006 Health Care Client Identifier Sex

displayName	code	codeSystemName	codeSystem
Male	M	AS 5017-2006 Health Care Client Identifier Sex	2.16.840.1.113883.13.68
Female	F	AS 5017-2006 Health Care Client Identifier Sex	2.16.840.1.113883.13.68
Intersex or Indeterminate	I	AS 5017-2006 Health Care Client Identifier Sex	2.16.840.1.113883.13.68
Not Stated/Inadequately Described	N	AS 5017-2006 Health Care Client Identifier Sex	2.16.840.1.113883.13.68

## 10.3 AS 5017-2006: Health Care Client Name Usage

Code Set AS 5017-2006 mapped to HL7 Entity Name Use Code

When referencing the following vocabulary tables, if one column in the code set table is bolded, use the code in that column; otherwise use the values in all columns.

### Note

CDA Release 2 uses HL7 Data Types Release 1. For some of the AS 5017-2006 values, there are no satisfactory equivalents in the HL7 Entity Name Use R1 code set. In these cases (marked R2), an HL7 Entity Name Use R2 code has been used.

### Note

In cases (marked EXT) where there are no suitable HL7 codes, extension codes have been created.

AS 5017-2006 Code	AS 5017-2006 Alternative Code	AS 5017-2006 Descriptor	HL7 Entity Name Use Code	HL7 Entity Name Use Name	HL7 Name Use Definition
1	L	Registered Name (Legal Name)	<b>L</b>	(R1) Legal	(R1) Known as/conventional/the one you use.
2	R	Reporting Name	<b>C</b>	(R1) License	(R1) As recorded on a license, record, certificate, etc. (only if different from legal name).
3	N	Newborn Name	<b>NB</b>	(EXT)	(EXT)
4	B	Professional or Business Name	<b>A</b>	(R1) Artist/Stage	(R1) Includes writer's pseudonym, stage name, etc.
5	M	Maiden Name (Name at birth)	<b>M</b>	(R2) Maiden Name	A name used prior to marriage.
8	O	Other Name (Alias)	<b>P</b>	(R1) Pseudonym	(R1) A self-asserted name that the person is using or has used.

## 10.4 AS 4846-2006: Health Care Provider Organisation Name Usage

Code Set AS 5017-2006 Organisation Name Usage mapped to HL7 Name Use Code

When referencing the following vocabulary tables, if one column in the code set table is bolded, use the code in that column; otherwise use the values in all columns.

### Note

There are no suitable HL7 codes, so extension codes have been created.

AS 4846-2006 Code	AS 4846-2006 Alternative Code	AS 4846-2006 Descriptor	HL7 Name Use Code	HL7 Name Use Name	HL7 Name Use Definition
1	U	Organizational unit/section/division name	<b>ORGU</b>	(EXT)	(EXT)
2	S	Service location name	<b>ORGS</b>	(EXT)	(EXT)
3	B	Business name	<b>ORGB</b>	(EXT)	(EXT)
4	L	Locally used name	<b>ORGL</b>	(EXT)	(EXT)
5	A	Abbreviated name	<b>ORGA</b>	(EXT)	(EXT)
6	E	Enterprise name	<b>ORGE</b>	(EXT)	(EXT)
8	X	Other	<b>ORGX</b>	(EXT)	(EXT)
9	Y	Unknown	<b>ORGY</b>	(EXT)	(EXT)

## 10.5 AS 5017-2006: Health Care Client Source of Death Notification

<b>displayName</b>	<b>code</b>	<b>codeSystemName</b>	<b>codeSystem</b>
Official death certificate or death register	D	AS 5017-2006 Health Care Client Source of Death Notification	2.16.840.1.113883.13.64
Health Care Provider	H	AS 5017-2006 Health Care Client Source of Death Notification	2.16.840.1.113883.13.64
Relative	R	AS 5017-2006 Health Care Client Source of Death Notification	2.16.840.1.113883.13.64
Other	O	AS 5017-2006 Health Care Client Source of Death Notification	2.16.840.1.113883.13.64
Unknown	U	AS 5017-2006 Health Care Client Source of Death Notification	2.16.840.1.113883.13.64

## 10.6 AS 5017-2006: Health Care Client Identifier Address Purpose

AS 5017-2006 mapped to HL7 AddressUse Code

When referencing the following vocabulary tables, if one column in the code set table is bolded, use the code in that column; otherwise use the values in all columns.

AS 5017-2006 Code	AS 5017-2006 Alternative Code	AS 5017-2006 Descriptor	HL7 AddressUse Code	HL7 AddressUse Name	HL7 AddressUse Definition
1	B	Business	<b>WP</b>	Work Place	An office address. First choice for business related contacts during business hours.
2	M	Mailing or Postal	<b>PST</b>	Postal Address	Used to send mail.
3	T	Temporary Accommodation (individual provider only)	<b>TMP</b>	Temporary Address	A temporary address, may be good for visit or mailing.
4	R	Residential (permanent) (individual provider only)	<b>H</b>	Home Address	A communication address at a home.
9	U	Not Stated/Unknown/Inadequately Described	<b>In this case simply omit the Address Use Code</b>		

## 10.7 AS 5017-2006: Health Care Client Electronic Communication Medium

When referencing the following vocabulary tables, if one column in the code set table is bolded, use the code in that column; otherwise use the values in all columns.

AS 5017-2006 Code	AS 5017-2006 Descriptor	AS 5017-2006 Alternative Code	HL7 URLScheme Code	HL7 URLScheme Name	HL7 URLScheme Definition
1	Telephone (excluding mobile telephone)	T	<b>tel</b>	Telephone	A voice telephone number.
2	Mobile (cellular) telephone  NOTE: Mobile will also need a TelecommunicationAddress Use code of MC (Mobile Contact) (see <a href="#">HL7: TelecommunicationAddressUse</a> )	M	<b>tel</b>	Telephone	A voice telephone number.
3	Facsimile machine	F	<b>fax</b>	Fax	A telephone number served by a fax device.
4	Pager  NOTE: Pager will also need a TelecommunicationAddress Use code of PG (Pager) (see <a href="#">HL7: TelecommunicationAddressUse</a> )	P	<b>tel</b>	Telephone	A voice telephone number.
5	Email	E	<b>mailto</b>	Mailto	Electronic mail address.

AS 5017-2006 Code	AS 5017-2006 Descriptor	AS 5017-2006 Alternative Code	HL7 URLScheme Code	HL7 URLScheme Name	HL7 URLScheme Definition
6	URL	U	Use the most appropriate code from the list below:		
			<b>file</b>	File	Host-specific local file names. Note that the file scheme works only for local files. There is little use for exchanging local file names between systems, since the receiving system likely will not be able to access the file.
			<b>ftp</b>	FTP	The File Transfer Protocol (FTP).
			<b>http</b>	HTTP	Hypertext Transfer Protocol.
			<b>mlp</b>	MLLP	The traditional HL7 Minimal Lower Layer Protocol. The URL has the form of a common IP URL e.g., mlp://<host>:<port>/ with <host> being the IP address or DNS host-name and <port> being a port number on which the MLLP protocol is served.
			<b>modem</b>	Modem	A telephone number served by a modem device.
			<b>nfs</b>	NFS	Network File System protocol. Some sites use NFS servers to share data files.
			<b>telnet</b>	Telnet	Reference to interactive sessions. Some sites, (e.g., laboratories) have TTY based remote query sessions that can be accessed through telnet.

## 10.8 AS 5017-2006: Health Care Client Electronic Communication Usage Code

AS 5017-2006 mapped to HL7 TelecommunicationAddressUse (HL7 TAU) Code

When referencing the following vocabulary tables, if one column in the code set table is bolded, use the code in that column; otherwise use the values in all columns.

Code	Descriptor	Alternative Code	HL7 TAU Code	HL7 TAU Name	HL7 TAU Description
1	Business	B	<b>WP</b>	Work place	An office address. First choice for business related contacts during business hours.
2	Personal	P	<b>H</b>	Home address	A communication address at a home, attempted contacts for business purposes might intrude privacy and chances are one will contact family or other household members instead of the person one wishes to call. Typically used with urgent cases, or if no other contacts are available.
3	Both business and personal use	A	<b>WP H</b>	Both Work place and Home address	

## 10.9 AS 5017-2006 Australian State/Territory Identifier - Postal

Code	Descriptor
NSW	New South Wales
VIC	Victoria
QLD	Queensland
SA	South Australia
WA	Western Australia
TAS	Tasmania
NT	Northern Territory
ACT	Australian Capital Territory
U	Unknown

## 10.10 AS 5017-2006 Health Care Client Identifier Date Accuracy Indicator

The data elements that use this value set consist of a combination of three codes, each of which denotes the accuracy of one date component:

A – The referred date component is accurately known.

E – The referred date component is an estimate.

U – The referred date component is unknown.

The data elements that use this value set contain positional fields (DMY).

Field 1 (D) – refers to the accuracy of the day component.

Field 2 (M) – refers to the accuracy of the month component.

Field 3 (Y) – refers to the accuracy of the year component.

### Note

The order of the date components in the HL7 date and time datatypes (YYYYMMDD) is the reverse of that specified above.

The possible combinations are as follows:

code	descriptor
AAA	Accurate date
AAE	Accurate day and month, estimated year
AEA	Accurate day, estimated month, accurate year
AAU	Accurate day and month, unknown year
AUA	Accurate day, unknown month, accurate year
AEE	Accurate day, estimated month and year
AUU	Accurate day, unknown month and year
AEU	Accurate day, estimated month, unknown year
AUE	Accurate day, unknown month

<b>code</b>	<b>descriptor</b>
EEE	Estimated date
EEA	Estimated day and month, accurate year
EAE	Estimated day, accurate month
EEU	Estimated day and month, unknown year
EUE	Estimated day, unknown month, estimated year
EAA	Estimated day, accurate month and year
EUU	Estimated day, unknown month and year
EAU	Estimated day, accurate month, unknown year
EUA	Estimated day, unknown month, accurate year
UUU	Unknown date
UUA	Unknown day and month, accurate year
UAU	Unknown day, accurate month, unknown year
UUE	Unknown day and month, estimated year
UEU	Unknown day, estimated month, unknown year
UAA	Unknown day, accurate month and year
UEE	Unknown day, estimated month and year
UAE	Unknown day, accurate month, estimated year
UEA	Unknown day, estimated month, accurate year

## 10.11 NCTIS: Admin Codes - Document Status

displayName	code	codeSystemName	codeSystem
Interim	I	NCTIS Document Status Values	1.2.36.1.2001.1001.101.104.20104
Final	F	NCTIS Document Status Values	1.2.36.1.2001.1001.101.104.20104
Withdrawn	W	NCTIS Document Status Values	1.2.36.1.2001.1001.101.104.20104

## 10.12 NCTIS: Admin Codes - Global Statement Values

<b>displayName</b>	<b>code</b>	<b>codeSystemName</b>	<b>codeSystem</b>
None known	01	NCTIS Global Statement Values	1.2.36.1.2001.1001.101.104.16299
Not asked	02	NCTIS Global Statement Values	1.2.36.1.2001.1001.101.104.16299
None supplied	03	NCTIS Global Statement Values	1.2.36.1.2001.1001.101.104.16299

## 10.13 NCTIS: Admin Codes - Entitlement Type

displayName	code	codeSystemName	codeSystem
Medicare Benefits	1	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Pensioner Concession	2	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Commonwealth Seniors Health Concession	3	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Health Care Concession	4	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Repatriation Health Gold Benefits	5	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Repatriation Health White Benefits	6	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Repatriation Health Orange Benefits	7	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Safety Net Concession	8	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Safety Net Entitlement	9	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Medicare Prescriber Number	10	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047
Medicare Pharmacy Approval Number	11	NCTIS Entitlement Type Values	1.2.36.1.2001.1001.101.104.16047

## 10.14 HL7 v3 CDA: Act.moodCode

Code	Value	Definition
EVN	Event	The entry defines an actual occurrence of an event.
INT	Intent	The entry is intended or planned.
APT	Appointment	The entry is planned for a specific time and place.
ARQ	Appointment Request	The entry is a request for the booking of an appointment.
PRMS	Promise	A commitment to perform the stated entry.
PRP	Proposal	A proposal that the stated entry be performed.
RQO	Request	A request or order to perform the stated entry.
DEF	Definition	The entry defines a service (master).

## 10.15 METeOR 291036: Indigenous Status

<b>displayName</b>	<b>code</b>	<b>codeSystemName</b>	<b>codeSystem</b>

## 10.18 CodeSystem OIDs

### Note

This table is provided as a quick look up table; it is not an exhaustive identification of all code systems referenced in this implementation guide. The entries in the codeSystem (Name) column enable identification of the codeSystem OID to be used, but may not be the proper name of that codeSystem, i.e. the value of the codeSystemName attribute. The value of codeSystemName **SHOULD** be the name associated with the OID in the [HL7 OID Registry](http://www.hl7.org/oid/index.cfm?ref=footer)<sup>1</sup>.

codeSystem (OID)	codeSystem (Name)
1.2.36.1.2001.1001.101	NCTIS Data Components
1.2.36.1.2001.1001.101.104.16047	NCTIS Entitlement Type Values

No record of this patient. (Used only on queries)	Z	HL7 Result Status	2.16.840.1.113883.12.123

## Appendix A. CDA Narratives

CDA requires that each section in its body include a narrative block, containing a clinically complete version of the section's encoded content using custom hypertext markup defined by HL7. The narrative is the human-readable and attestable part of a CDA document, and **SHALL** stand alone as an accurate representation of the content of the document without any need to consult entries in the body.

There is no canonical markup for specific CDA components, but some conformance points apply:

- The narrative block **SHALL** be encapsulated within the text component of the CDA section.
- The narrative contents **SHALL** conform to the requirements specified in the CDA Rendering Specification.
  - In accordance with the requirement to completely represent section contents, values of codedText or codeableText data elements defined in the SCS **SHALL** include an originalText or a displayName component (or both). Where available, the originalText **SHOULD** be found in the narrative, otherwise the displayName **SHOULD** be found in the narrative.
- The narrative contents **SHALL** completely and accurately represent the clinical information encoded in the section. Content **SHALL NOT** be omitted from the narrative.
- The narrative **SHALL** conform to the content requirements of the CDA specification [[HL7CDAR2](#)] and the XML Schema.

Clinical judgement is required to determine the appropriate presentation for narrative. We may release additional guidance in this regard. The examples provided in sections of this document offer some guidance for narrative block markup and may be easily adapted as boilerplate markup.

*This page is intentionally left blank.*

# Appendix B. Log of Changes

This appendix lists the major changes and fixes applied to this CDA Implementation Guide. A single change is likely to be listed multiple times, as changes are listed in order of appearance and categorised by location in the document. For example, a cardinality change may appear in both the Data Hierarchy and CDA Mapping table.

Changes from Version 1.1 dv014 2017-05-08 to Version 1.1 dv022 2018-07-09

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed
	Section	Section Name					
1	3	Service Referral Data Hierarchy	Normative Impact	SERVICE REFERRAL DETAIL > REQUESTED SERVICE > SERVICE PROVIDER: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.	Agency	Information requirements change.	26 Feb 2018
2	5.1	ClinicalDocument	Normative Impact	ClinicalDocument/templateId/@root corrected to "1.2.36.1.2001.1001.100.1002.231".	Agency	Defect correction - retired OID arc of ".101." was erroneously included.	16 Aug 2017
3	5.1.2	InformationRecipient	Normative Impact	informationRecipient: cardinality changed from 1..1 to 0..1 in line with requirement to record the referee as an information recipient.	Agency	Information requirements change.	26 Feb 2018
4	6.1.4.1	PRIMARY CARE PROVIDER as a PERSON	Normative Impact	EMPLOYER ORGANISATION > ADDRESS: added missing constraint AUSTRALIAN OR INTERNATIONAL ADDRESS SHALL be instantiated as an AUSTRALIAN ADDRESS" and "Address Purpose (addr/@use) SHALL be set to Business".	Agency	Defect correction.	08 Oct 2017
				EMPLOYER ORGANISATION > ELECTRONIC COMMUNICATION DETAIL: added missing constraint "Electronic Communication Usage Code (telecom/@use) SHALL be set to Workplace".			
5	7.1.1.1.1	SERVICE PROVIDER	Normative Impact	SERVICE PROVIDER: cardinality changed from 1..1 to 0..1 in line with requirement to optionally record the referee.	Agency	Information requirements change.	26 Feb 2018
6	7.1.1.1.1.1	SERVICE PROVIDER as a PERSON	Normative Impact	SERVICE PROVIDER: cardinality changed from 1..1 to 0..1 in line with requirement to optionally record the referee.	Agency	Information requirements change.	26 Feb 2018
7	7.1.1.1.1.1	SERVICE PROVIDER as an ORGANISATION	Normative Impact	SERVICE PROVIDER: cardinality changed from 1..1 to 0..1 in line with requirement to optionally record the referee.	Agency	Information requirements change.	26 Feb 2018
8	7.1.4.2	Known Medication (MEDICATION INSTRUCTION)	Normative Impact	Medication Instruction Comment: corrected displayName for code 103.16044 from "Medication Instruction Comment" to "Additional Comments".	Agency	Defect correction	11 Nov 2017
9	8.4	Entity Identifier	No Normative Impact	ext:asEntityIdentifier/ext:assigningGeographicArea/ext:name: corrected rule on permissible values to be expressed as a constraint instead of a linked value set.	Agency	Defect correction	04 May 2018
10	8.6	Address	No Normative Impact	ADDRESS: Clarified scope of guidance on nullFlavor use; it applies to all participants that make use of the common pattern.	Agency	Improved guidance	15 Nov 2017

Changes from Version 1.0 2016-06-27 to Version 1.1 2017-05-08

## Note

This specification includes typographical, stylistic, and editorial corrections to rebrand the document from the National E-Health Transition Authority (NEHTA) to the Australian Digital Health Agency (the Agency).

All XML fragments have been reviewed and updated to align with the semantic changes defined in the CDA Mapping tables.

All CDA R-MIM representations have been reviewed and updated to align with the semantic changes defined in the CDA Mapping tables.

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed
	Section	Section Name					
1	1.5	Document Map	No Normative Impact	Replaced reference to superseded Participation Data Specification v3.2 with Participation Data Specification v3.3.	Agency	Update of superseded specification.	15 Feb 2017

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed
	Section	Section Name					
2	3	Service Referral Data Hierarchy	Normative Impact	REQUESTED SERVICE > Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	15 Sept 2016
				Communication Alert Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Alert Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Current Service (REQUESTED SERVICE) > Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Adverse Reaction Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Medication Instruction Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Problem/Diagnosis Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Procedure Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Uncategorised Medical History Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Pathology Test Result Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Examination Comment not included in the data hierarchy to align to SCS data hierarchy which no longer includes this data element.			
				Imaging Examination Result Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Pending Diagnostic Investigation (REQUESTED SERVICE) > Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
3	4	Administrative Observations	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
4	5.1	ClinicalDocument	Normative Impact	ClinicalDocument/templated/@extension updated to "1.1".	Agency	Change for a new version of the CDA-IG.	16 Oct 2016
				ClinicalDocument/code: identified codeSystemName attribute as optional.			
5	5.1	ClinicalDocument	No Normative Impact	Context: added label "CDA Header Data Element".	Agency	Defect correction.	17 Oct 2016
6	5.1.1	LegalAuthenticator	Normative Impact	legalAuthenticator/assignedEntity/assignedPerson: changed cardinality from 0..1 to 1..1.	Agency	Alignment to Agency conformance requirements	24 Feb 2017
7	5.1.1	LegalAuthenticator	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
8	5.1.2	InformationRecipient	Normative Impact	informationRecipient: cardinality changed from 0..* to 1..1 in line with requirement to record the referee as an information recipient.	Agency	Defect correction: correctly represent the referee as an information recipient.	20 Jan 2017
				informationRecipient/@typeCode: added missing value typeCode="PRCP" and removed Vocab column entry.			
				InformationRecipient/intendedRecipient/@classCode: added missing value classCode="ASSIGNED".			
				informationRecipient/intendedRecipient/id: added missing constraint to set the value of id to be the same as the referee (SERVICE REFERRAL DETAIL > REQUESTED SERVICE > SERVICE PROVIDER).			
				informationRecipient/intendedRecipient/informationRecipient/<Entity Identifier>: added missing constraint to set the value of one entity identifier to be the same as the entity identifier of the referee (SERVICE REFERRAL DETAIL > REQUESTED SERVICE > SERVICE PROVIDER).			
				informationRecipient/intendedRecipient/receivedOrganization/<Entity Identifier>: added missing constraint to set the value of one entity identifier to be the same as the entity identifier of the referee (SERVICE REFERRAL DETAIL > REQUESTED SERVICE > SERVICE PROVIDER).			

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed
	Section	Section Name					
9	5.1.2	InformationRecipient	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
10	5.1.3	Custodian	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
11	6.1	SERVICE REFERRAL	Normative Impact	Removed REFEREE (6.1.5.1 REFEREE as a PERSON, and 6.1.5.2 REFEREE as an ORGANISATION). REFEREE incorrectly duplicated 5.1.2 InformationRecipient.	Agency	Defect correction.	20 Dec 2016
12	6.1	SERVICE REFERRAL	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
				RELATED DOCUMENT: added row in mapping table for missing SCS Data Component.			
				DateTime Attested: removed comment "Required CDA element" as it is not relevant in this context.			
13	6.1.1	SUBJECT OF CARE	Normative Impact	Sex (administrativeGenderCode): added prohibition of @nullFlavor.	Agency	Defect correction.	10 Sept 2016
				Indigenous Status (ethnicGroupCode): added prohibition of @nullFlavor.			
14	6.1.1	SUBJECT OF CARE	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
				Added prohibition of Relationship to Subject of Care - n/a no mapping to CDA.			
15	6.1.2	DOCUMENT AUTHOR	Normative Impact	Relationship to Subject of Care: corrected invalid Xpath.	Agency	Defect correction.	08 Oct 2016
16	6.1.2	DOCUMENT AUTHOR	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
17	6.1.3.1	PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider	Normative Impact	Relationship to Subject of Care: corrected invalid Xpath.	Agency	Defect correction.	16 Sept 2016
18	6.1.3.1	PATIENT NOMINATED CONTACT as a PERSON - Healthcare or Human Services Provider	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016
				EMPLOYER ORGANISATION > ADDRESS: added missing row for ADDRESS 0..*.			
				EMPLOYER ORGANISATION > ELECTRONIC COMMUNICATION DETAIL: added missing row for ELECTRONIC COMMUNICATION DETAIL 0..*.			
19	6.1.3.2	PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider	Normative Impact	Relationship to Subject of Care: added missing design rows for Relationship to Subject of Care and fixed invalid Xpath.	Agency	Defect correction.	16 Sept 2016
20	6.1.3.2	PATIENT NOMINATED CONTACT as a PERSON - Not a Healthcare or Human Services Provider	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	17 Oct 2016

29	7.1.1	SERVICE REFERRAL DETAIL	Normative Impact	SERVICE REFERRAL DETAIL: corrected invalid Xpaths for title by removing erroneous "/".	Agency	Defect correction.	28 Feb 2017
				SERVICE REFERRAL DETAIL: corrected invalid Xpaths for text by removing erroneous "/".			
				Section Type: corrected invalid Xpaths which include the attributes of the code element but miss inclusion of the code element itself.			
30	7.1.1	SERVICE REFERRAL DETAIL	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
31	7.1.1.1	REQUESTED SERVICE	Normative Impact	REQUESTED SERVICE: removed erroneous constraint enforcing default typeCode on the entry.	Agency	Defect correction.	27 Oct 2016
				Service Description: added constraint "NS" to the Vocab column.			
				Request Validity Period: identified codeSystemName attribute as optional. A link to a table of code system names and OIDs is provided.			
				Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
32	7.1.1.1	REQUESTED SERVICE	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
33	7.1.1.1.1	SERVICE PROVIDER as a PERSON	Normative Impact	Context: removed additional incorrect classes from Xpath "component[req_serv]/section/" and corrected label from [ref] to [ref_det].	Agency	Defect correction.	02 Sept 2016
				SERVICE PROVIDER: corrected cardinality from 0..1 to 1..1.			
				SERVICE PROVIDER: Amended constraint to correctly reference informationRecipient "SERVICE PROVIDER as an ORGANISATION SHALL be recorded as SERVICE PROVIDER as an ORGANISATION (performer) and as InformationRecipient."			
				Relationship to Subject of Care: corrected invalid Xpath.			
34	7.1.1.1.1.1	SERVICE PROVIDER as a PERSON	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
				Participation Type: corrected wording of SCS constraint from "Service Provider" to "Referee".			
35	7.1.1.1.1.2	SERVICE PROVIDER as an ORGANISATION	Normative Impact	Context: removed additional incorrect classes from Xpath "component[req_serv]/section/" and corrected label from [ref] to [ref_det].	Agency	Defect correction.	02 Sept 2016
				SERVICE PROVIDER: Amended constraint to correctly reference informationRecipient "SERVICE PROVIDER as an ORGANISATION SHALL be recorded as SERVICE PROVIDER as an ORGANISATION (performer) and as InformationRecipient."			
				Organisation Name: corrected invalid Xpath case "asOrganizationPartof" to "asOrganizationPartOf".			
36	7.1.1.1.1.2	SERVICE PROVIDER as an ORGANISATION	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
				Participation Type: corrected wording of SCS constraint from "Service Provider" to "Referee".			
				Organisation Name Usage: removed erroneous data component "Organisation Name Detail" from the SCS Data Component entry.			
37	7.1.1.2	RELATED DOCUMENT	Normative Impact	RELATED DOCUMENT: removed erroneous constraint enforcing default typeCode on the entry.	Agency	Defect correction.	27 Oct 2016
				RELATED DOCUMENT: identified act/id attribute as optional.			
				Document Title: identified codeSystemName attribute as optional. A link to a table of code system names and OIDs is provided.			
38	7.1.1.2	RELATED DOCUMENT	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016

	Section	Section Name					
39	7.1.1.3	Interpreter Required Alert (COMMUNICATION ALERT)	Normative Impact	Alert Description: identified codeSystemName attribute as optional. A link to a table of code system names and OIDs is provided.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	27 Oct 2016
				Alert Description: moved mapping rows from Detailed Clinical Model Identifier to Alert Description.			
				Detailed Clinical Model Identifier: moved mapping rows to Alert Description and declared n/a.			
				Communication Alert Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
40	7.1.1.3	Interpreter Required Alert (COMMUNICATION ALERT)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
41	7.1.1.4	Other Alerts (ALERT)	Normative Impact	Other Alerts (ALERT): removed erroneous constraint enforcing default typeCode on the entry.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	27 Oct 2016
				Other Alerts (ALERT): removed constraint "observation/@nullFlavor SHALL NOT be present."			
				Alert Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
42	7.1.1.4	Other Alerts (ALERT)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	21 Oct 2016
43	7.1.2	CURRENT SERVICES	Normative Impact	CURRENT SERVICES: corrected invalid Xpaths for title by removing erroneous "/".	Agency	Defect correction.	28 Feb 2017
				CURRENT SERVICES: corrected invalid Xpaths for text by removing erroneous "/".			
				Section Type: corrected invalid Xpaths which include the attributes of the code element but miss inclusion of the code element itself.			
44	7.1.2	CURRENT SERVICES	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
45	7.1.2.1	Current Service (REQUESTED SERVICE)	Normative Impact	Current Service (REQUESTED SERVICE): removed erroneous constraint enforcing default typeCode on the entry.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	24 Jan 2017
				Service Category: added constraint "NS" to the Vocab column.			
				Service Description: added constraint "NS" to the Vocab column.			
				Current Service (REQUESTED SERVICE): removed constraint "act/@nullFlavor SHALL NOT be present."			
				Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
46	7.1.2.1	Current Service (REQUESTED SERVICE)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
47	7.1.2.1.1	SERVICE PROVIDER	Normative Impact	Organisation Name: corrected invalid Xpath case "asOrganizationPartof" to "asOrganizationPartOf".	Agency	Defect correction.	18 Sept 2016
48	7.1.2.1.1	SERVICE PROVIDER	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
				Organisation Name Usage: removed erroneous data component "Organisation Name Detail" from the SCS Data Component entry.			
49	7.1.3	ADVERSE REACTIONS	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
50	7.1.3.1	EXCLUSION STATEMENT - ADVERSE REACTIONS	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
51	7.1.3.2	ADVERSE REACTION	Normative Impact	Adverse Reaction Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	04 Mar 2017
				Manifestation: identified observation/id attribute as optional.			
				Reaction Type: included constraint on value set to prohibit Drun interaction and its children.			
52	7.1.3.2	ADVERSE REACTION	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
53	7.1.4	Medications (MEDICATION ORDERS)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
54	7.1.4.1	EXCLUSION STATEMENT - MEDICATIONS	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed

	Section	Section Name					
67	7.1.6.1	PATHOLOGY TEST RESULT	Normative Impact	PATHOLOGY TEST RESULT: relaxed constraint section to "title SHALL be present where narrative (section/text) is present."	Agency	Defect correction.	24 Jan 2017
				Test Result Name (Pathology Test Result Name): Amended the constraint in the Vocab column from SHOULD to SHALL.			
				Diagnostic Service: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
				Overall Pathology Test Result Status: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
				Overall Pathology Test Result Status: identified observation/id attribute as optional.			
				Pathological Diagnosis: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
				Conclusion (Pathology Test Conclusion): corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
				Conclusion (Pathology Test Conclusion): identified observation/id attribute as optional.			
				Test Requested Name: Amended the constraint in the Vocab column from SHOULD to SHALL.			
				Observation DateTime: identified observation/id attribute as optional.			
Pathology Test Result Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.							
68	7.1.6.1	PATHOLOGY TEST RESULT	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
69	7.1.6.1.1	Test Specimen Detail (SPECIMEN)	Normative Impact	Side: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".	Agency	Defect correction.	07 Oct 2016
				Anatomical Location Image: identified observationMedia/id attribute as optional.			
				Image: identified observationMedia/id attribute as optional.			
70	7.1.6.1.1	Test Specimen Detail (SPECIMEN)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
71	7.1.6.1.2	Result Group (PATHOLOGY TEST RESULT GROUP)	Normative Impact	Result Group (PATHOLOGY TEST RESULT GROUP): identified organizer/id attribute as optional.	Agency	Defect correction.	15 Sept 2016
				Pathology Test Result Group Name: Amended the constraint in the Vocab column from SHOULD to SHALL.			
				Result (INDIVIDUAL PATHOLOGY TEST RESULT): identified observation/id attribute as optional.			
				Individual Pathology Test Result Name: Amended the constraint in the Vocab column from SHOULD to SHALL.			
				Individual Pathology Test Result Comment: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
				Individual Pathology Test Result Reference Range Guidance: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".			
Individual Pathology Test Result Status: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".							
72	7.1.6.1.2	Result Group (PATHOLOGY TEST RESULT GROUP)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
73	7.1.6.1.2.1	Individual Pathology Test Result Value Reference Ranges (REFERENCE RANGE DETAILS)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
74	7.1.6.1.2.2	Result Group Specimen Detail (SPECIMEN)	Normative Impact	Side: corrected the value for the SNOMED CT code system name in the constraint to "SNOMED CT".	Agency	Defect correction.	07 Oct 2016
				Anatomical Location Image: identified observationMedia/id attribute as optional.			
				Image: identified observationMedia/id attribute as optional.

83	7.1.6.2.2	EXAMINATION REQUEST DETAILS	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
84	7.1.6.3	Pending Diagnostic Investigation (REQUESTED SERVICE)	Normative Impact	Pending Diagnostic Investigation (REQUESTED SERVICE): removed erroneous constraint enforcing default typeCode on the entry.	Agency	Alignment with updates to the cardinality of technical identifiers & changes to the logical model (SCS).	07 Mar 2017
				Requested Service Instance Identifier: cardinality changed from 1..1 to 0..1 in line with changes in the SCS.			
				Detailed Clinical Model Identifier: corrected Xpath from component[pend_service] to entry[pend_service].			
				Detailed Clinical Model Identifier: identified codeSystemName attribute as optional. A link to a table of code system names and OIDs is provided.			
85	7.1.6.3	Pending Diagnostic Investigation (REQUESTED SERVICE)	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
86	7.1.6.3.1.1	SERVICE PROVIDER as a PERSON	Normative Impact	Context: removed additional incorrect classes from Xpath "component[req_serv]/section/" and corrected identification of the entry to entry[pend_serv].	Agency	Defect correction.	20 July 2016
87	7.1.6.3.1.1	SERVICE PROVIDER as a PERSON	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
				Participation Type: corrected wording of SCS constraint from "Service Provider" to "Referee".			

ID	Document Ref		Change Type	Change Detail	Change Initiated By	Rationale For Change	Date Changed
	Section	Section Name					
88	7.1.6.3.1.2	SERVICE PROVIDER as an ORGANISATION	Normative Impact	Context: corrected Xpath to "/ClinicalDocument/component/structuredBody/component[diag_inv]/section/entry[pend_serv]/act/".	Agency	Defect correction.	15 Sept 2016
				SERVICE PROVIDER: corrected cardinality from 1..1 to 0..1.			
				Organisation Name: corrected invalid Xpath case "asOrganizationPartof" to "asOrganizationPartOf".			
89	7.1.6.3.1.2	SERVICE PROVIDER as an ORGANISATION	No Normative Impact	Context: added leading "/" to beginning of Context Xpath.	Agency	Defect correction.	07 Oct 2016
				Participation Type: corrected wording of SCS constraint from "Service Provider" to "Referee".			
				Organisation Name Usage: removed erroneous data component "Organisation Name Detail" from the SCS Data Component entry.			
90	8.1	code	No Normative Impact	Added statement on the use of the qualifier CDA element.	Agency	Improved guidance.	31 Oct 2016
91	8.6	Address	Normative Impact	Australian Lot Number: added constraint "The word 'Lot' SHOULD precede the lot number and be separated by a space.	Agency	Alignment with Participation Data Specification v3.3.	25 Jan 2016
				Australian Suburb/Town/Locality: corrected Vocab constraint "should" to be bold and uppercase.			
				Australian Postcode: corrected Vocab constraint "should" to be bold and uppercase.			
92	9	Australian Digital Health Agency CDA Extensions	No Normative Impact	Added missing section 9.7 PersonalRelationship.	Agency	Defect correction.	10 Oct 2016
				Removed unneeded section 9.5 Administrative Gender Code.			
				Removed unneeded section 9.6 Birth Time.			
93	Reference List		Normative Impact	Participation Data Specification: replaced reference to superseded v3.2 with v3.3.	Agency	Alignment to Participation Data Specification v3.3.	27 Jan 2017
				Conformance Profile: Replace v1.6 with v1.7.		Use latest version of specification.	05 May 2017
