1 Introduction

This document describes the elements of the GS1 XML Despatch Advice message that will be used by Health Jurisdictions and is intended for technical staff who have the responsibility of implementing these messages in their local systems. This information will assist technical staff to correctly populate the Despatch Advice message.

It is presumed that readers have an understanding of XML and an overview of the messages defined in Australian Standard AS5023 and GS1 XML.

The GS1 XML data elements in this document are limited to those which have an equivalent in, or are related to, the AS5023 standard for Health Supply Chain Messaging.

The GS1 XML path root is "despatchAdvice" and all XML paths will assume this starting point unless otherwise stated.

The cardinality listed is the cardinality of the actual element or attribute at the lowest level. Higher level elements need to be taken into consideration in determining whether or not the element is required in a particular circumstance.

Note also that the constraints are based on technical rules. Business rules may impose additional constraints.

1.1 Format - Data Sections

In the following sections the table cells are colour coded as follows

AS5023 related information is yellow
Basic GS1 XML information is green
Constraint information is blue
Co-requisite and optional elements are unshaded

The table headings are:

- AS5023 Reference
 - This provides a link to the specific data element in the AS5023.2-2003 document.
 - Section: This will be one of "Header", "Detail", or "End of Message" as per the headings of the major tables for each data set in the AS5023 document.
 - Group: The title in the first column of the AS5023 table.
 - Element: The Element name as given in the third column of the AS5023 table.
- Description/Comment
 - This is a transcription of parts of the Description and Comments columns from the AS5023 table where they help clarify the intent of the data element.
- GS1 XML path
 - This is a pseudo XPath to the element that will assist in locating the element within the XML tree. Prefixes etc. are specifically excluded for the sake of simplification.
- Basic Type

One of "Attribute", "Element", or "Complex Type". If it is a Complex Type, then typically there will be a subsection following that identifies the Attributes and Elements of that Complex Type.

- Comments

Any other information that will assist in the population of the data element. (In some cases, the source of these comments come from NEHTA documents.)
- Schema Constraints

Any restrictions on the use of the data element. Sometimes these constraints are inherent within the schema. Sometimes they are external rules imposed by GS1 or NEHTA standards.

 - Mandatory An item can be mandatory based on external GS1 or NEHTA rules in addition to the schema rules.
 - Data Type Where possible, this is the simple XML data type. In some cases it is the Complex Type with further details of the component attributes and elements provided in other sections of the document.
 - Cardinality The cardinality of the specific element. Note that the cardinality of parent elements also influence how the element is used.
 - Other constraints are listed following the Cardinality restraint. For example, the allowable values of a list element.
- Co-requisites

Other elements and attributes which MUST be used if this element is used. The data type is listed after the name of the element/attribute.
- Optional Elements

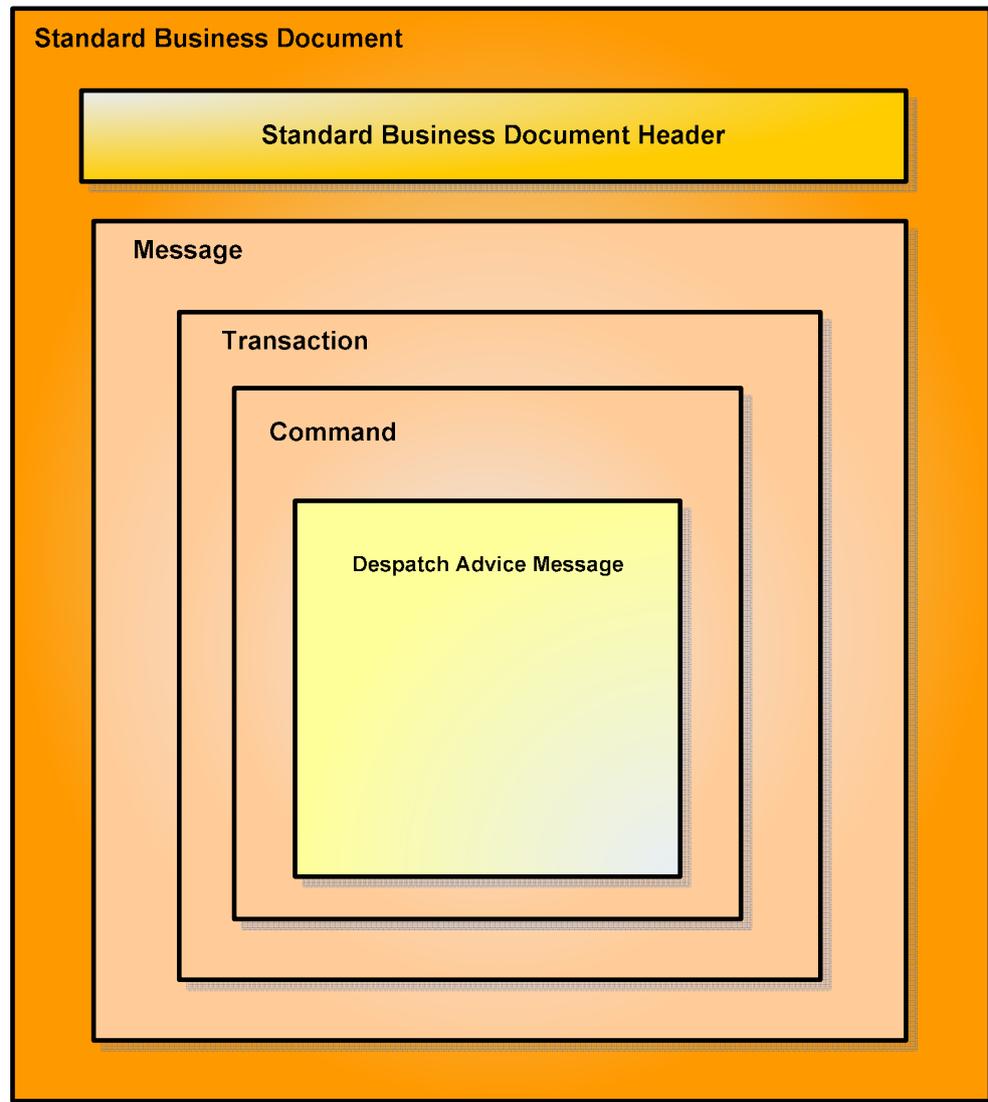

Other data elements and attributes which MAY be used if this element is used. The data type is listed after the name of the element/attribute.

When related elements are referred to, particularly in the Co-requisites and Optional Elements sections, a functional bias has been taken in deciding which elements to include or exclude. For example, the co-requisites for *documentStatus* included *contentVersion*, *orderHeaderIndicator*, etc. as they all define control information about the document. *multiShipmentOrderLineItem* was not included even though it is a mandatory element and is at the same XML level as it defined the contents of the document.

1.2 XML Document Structure and Layers

The Despatch Advice Message elements must be wrapped in the Message Layer element: *message*. In turn, the Message Layer elements must be wrapped in the UN/CEFACT Standard Business Document. Details of these elements are given Header Elements section. AS5023 information is not relevant to the Header or Message Layer elements.

The following diagram shows the relationship between the Header elements, Message Layer elements, and the Despatch Advice Message elements.

1.3 Global Trade Item Numbers - GTINs

Global Trade Item Numbers are used extensively to identify items. This field MUST contain a 14 digit number, so a 'filler 0' must be added to the front of the number if they are 8, 12, or 13 digit GTINs. For example, 9312345678901 becomes 09312345678901. This does not change the number at all, it is simply a non-significant digit added so this will pass schema validation.

1.4 Reference documents

The information in this document is based the documents identified in the Reference Section.

2 Header Elements

In this section, the GS1 XML path root is:

StandardBusinessDocument

(XPath: StandardBusinessDocument)

All XML paths will assume this starting point unless otherwise stated.

The Standard Business Document Header schema is specified by UN/CEFACT, and used by GS1 to envelope the business documents such as the Multi Shipment Order. GS1 has specified additional constraints to those in the UN/CEFACT schema when being used in the GS1 XML context. NEHTA has further specified additional constraints to both of these for use in Health Sector Supply Chain messaging.

2.1 Header Version

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→HeaderVersion

	<i>Data Type:</i> string		
	<i>Cardinality:</i> 0..1		
	Email address of Department in the sending organisation who is able to address issues concerning message delivery, should not contain Personally identifiable information (PII).		
<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Sender→ContactInformation) →Contact (<i>string</i>) →FaxNumber (<i>string</i>) →TelephoneNumber (<i>string</i>)		
<i>Optional Elements</i>	→ContactTypeIdentifier (<i>string</i>)		

2.6 Sender Fax Number

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Sender→ContactInformation→ FaxNumber		
<i>Basic Type</i>	Element		
<i>Comments</i>	Optional in UN/CEFACT schema definition.		
<i>Schema Constraints</i>	<i>Mandatory:</i> No		
	<i>Data Type:</i> string		
	<i>Cardinality:</i> 0..1		
	Fax Number of the sending organisation who is able to address issues concerning message delivery.		
<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Sender→ContactInformation) →Contact (<i>string</i>) →EmailAddress (<i>string</i>) →TelephoneNumber (<i>string</i>)		
<i>Optional Elements</i>	→ContactTypeIdentifier (<i>string</i>)		

2.7 Sender Phone Number

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Sender→ContactInformation→ TelephoneNumber		
<i>Basic Type</i>	Element		
<i>Comments</i>	Optional in UN/CEFACT schema definition.		
<i>Schema Constraints</i>	<i>Mandatory:</i> No		
	<i>Data Type:</i> string		
	<i>Cardinality:</i> 0..1		

	Phone Number of the sending organisation who is able to address issues concerning message delivery.
<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Sender→ContactInformation) →Contact (<i>string</i>) →EmailAddress (<i>string</i>) →FaxNumber (<i>string</i>)
<i>Optional Elements</i>	→ContactTypeIdentifier (<i>string</i>)

2.8 Receiver

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Receiver→Identifier		
<i>Basic Type</i>	Element		
<i>Comments</i>	GS1 places additional constraints on the original UN/CEFACT schema definition.		
<i>Schema Constraints</i>	<i>Mandatory:</i> Yes		
	<i>Data Type:</i> Global Location Number		
	<i>Cardinality:</i> 1..*		
	Only <u>one</u> Receiver element can be used even though the schema allows for multiple elements. The Receiver Identifier <u>must</u> be the GLN of the sending organisation.		
<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Receiver) →Identifier→Authority (<i>Attribute - string</i>) →ContactInformation→Contact (<i>string</i>) →ContactInformation→EmailAddress (<i>string</i>) →ContactInformation→FaxNumber (<i>string</i>) →ContactInformation→TelephoneNumber (<i>string</i>)		
<i>Optional Elements</i>	(Relative to StandardBusinessDocumentHeader→Receiver) →ContactInformation→ContactTypeIdentifier (<i>string</i>)		

2.9 Authority

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Receiver→Identifier→Authority		
<i>Basic Type</i>	Attribute		
<i>Comments</i>	This attribute must be used according to GS1 standards.		
<i>Schema Constraints</i>	<i>Mandatory:</i> Yes		
	<i>Data Type:</i> string		
	<i>Cardinality:</i> 1..1		
	Must be set to “EAN.UCC”		
<i>Co-requisites</i>	None		
<i>Optional Elements</i>	None		

2.10 Receiver Name

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Receiver→ContactInformation→Contact		
<i>Basic Type</i>	Element		
<i>Comments</i>	This element is mandatory if ContactInformation is used as per UN/CEFACT schema definition.		
<i>Schema Constraints</i>	<i>Mandatory:</i> No		
	<i>Data Type:</i> string		
	<i>Cardinality:</i> 1..1		
	Department and or title of technical contact in the receiving organisation who is able to address issues concerning message delivery. Should not contain the name of an individual.		

<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Receiver→ContactInformation) →EmailAddress (<i>string</i>) →FaxNumber (<i>string</i>) →TelephoneNumber (<i>string</i>)
<i>Optional Elements</i>	→ContactTypeIdentifier (<i>string</i>)

2.11 Receiver Email Address

<i>AS5023 Reference</i>	<i>Section:</i>	<i>Group:</i>	<i>Element:</i>
<i>Description/Comments</i>			
<i>GS1 XML Path</i>	StandardBusinessDocumentHeader→Receiver→ContactInformation→ EmailAddress		
<i>Basic Type</i>	Element		
<i>Comments</i>	Optional in UN/CEFACT schema definition.		
<i>Schema Constraints</i>	<i>Mandatory:</i> No		
	<i>Data Type:</i> string		
	<i>Cardinality:</i> 0..1		
	Email address of Department in the receiving organisation who is able to address issues concerning message delivery, should not contain Personally identifiable information (PII).		
<i>Co-requisites</i>	(Relative to StandardBusinessDocumentHeader→Receiver→ContactInformation) →Contact (<i>string</i>) →FaxNumber (<i>string</i>) →TelephoneNumber (<i>string</i>)		
<i>Optional Elements</i>	→ContactTypeIdentifier (<i>string</i>)

3 Message Layer Elements

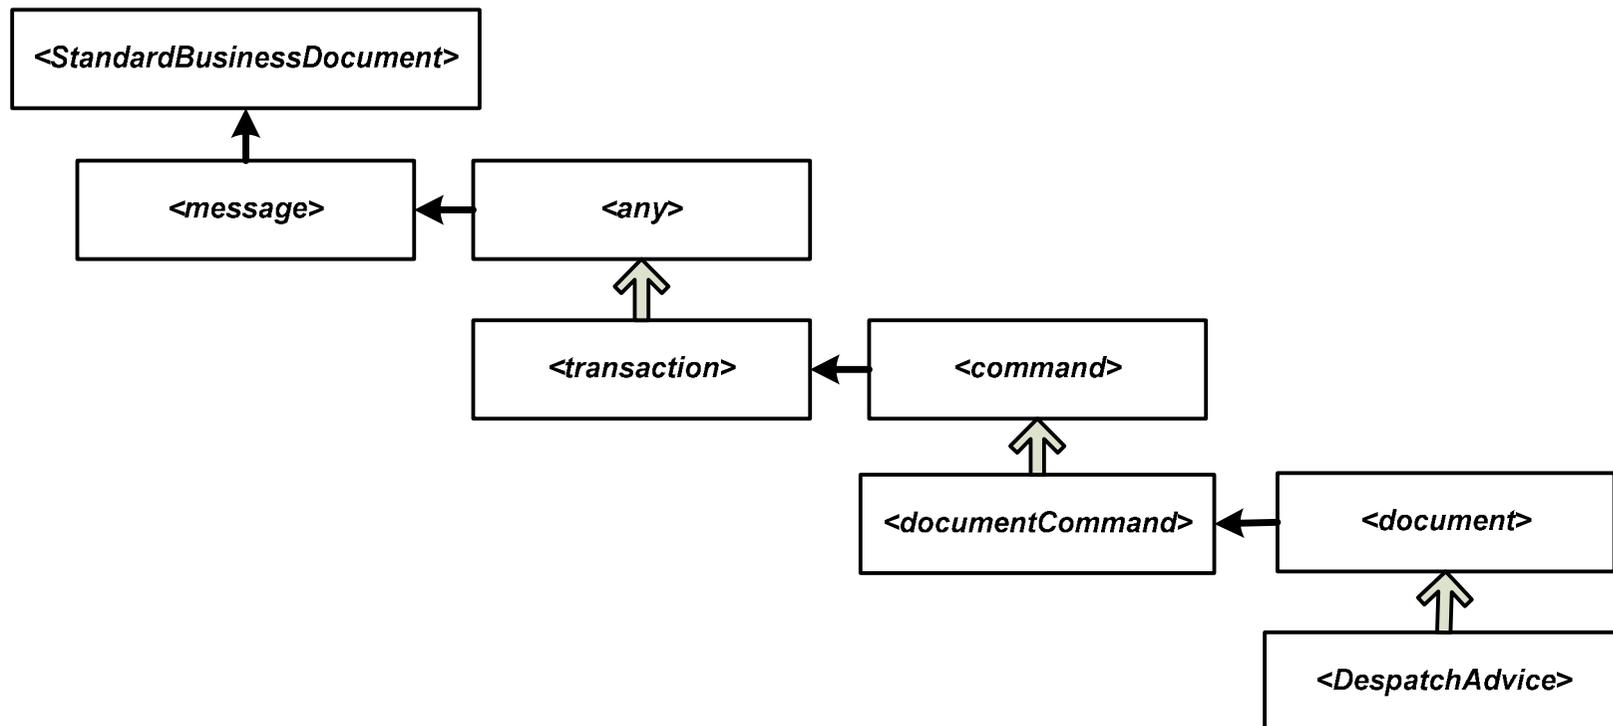

In this section, the GS1 XML path root is:

StandardBusinessDocument→message

(XPath: StandardBusinessDocument / eanucc:message)

All XML paths will assume this starting point unless otherwise stated.

The Message Layer has three sub-layers. The lowest is the *documentCommand* element which wraps around the *despatchAdvice*. *despatchAdvice* replaces an abstract *document* element within the *documentCommand* element. The *documentCommand* element itself replaces an abstract *command* element in the *transaction* element. Finally, the *transaction* element replaces an *any* element in the *message* element. (Refer to [Standard Business Document Header \(SBDH\) Technical Implementation Guide](#) for further details on their usage.) In summary, the links between the layers are:

4 Business Document Layer Message Elements

This layer covers the Despatch Advice message.

In this section, the GS1 XML path root is:

StandardBusinessDocument→message→transaction→command→documentCommand→documentCommandOperand→despatchAdvice

(XPath: StandardBusinessDocument / eanucc:message / eanucc:transaction / command / eanucc:documentCommand / documentCommandOperand / deliver:despatchAdvice)

All XML paths will assume this starting point unless otherwise stated.

This section lists additional fields that are not explicitly mentioned in the AS5023 specification, but are related to those that are and do provide support for the AS5023 requirements, or are specified as mandatory by GS1.

4.1 Comments

This section contains comments on topics impact a number of data elements.

4.1.1 Item Perspective vs Packaging Perspective

The Despatch XML document may be viewed from either an item perspective (*despatchAdviceItemContainmentLineItem* element) or a packaging perspective (*despatchAdviceLogisticsUnitLineItem* element), but not both. The packaging perspective does contain *despatchAdviceItemContainmentLineItem* as a child element, but the data in this element is about the items contained inside the nominated package. A full data set is held by this structure, but for some common views on the Despatch Advice, the data has to be derived rather than extracted. For example, the packaging perspective gives the quantity of each item contained in a package. To get the total quantity of a particular item in the shipment, the quantities of that item in each individual package must be summed together. Similarly, there is no list attached to an item which identifies all the packages in which it is held. However it can be derived in a similar manner to the total shipped quantity of an item.

4.1.2 Expiry Dates, Lot Numbers etc.

The *despatchAdviceLogisticsUnitLineItem* element contains elements for Expiry Dates, Best Before Dates, Shelf Life, Lot Number, Batch Number, and Serial Number. These are all child data elements of a specific item. Consequently if there are multiple values for these elements for the items in the shipment, there must be multiple *despatchAdviceLogisticsUnitLineItem* elements which have the same item GTIN. For example, if in a shipment of 1,000 items, 600 had an Expiry date of 30 June and 400 expired on 31 July, there would be two *despatchAdviceLogisticsUnitLineItem* elements. Both would have the same GTIN, but one would have a quantity of 600 and an Expiry Date of 30 June, and the other a quantity of 400 and Expiry Date of 31 July.

All of these data elements are closely related in practice, so there should be a combined strategy for processing them all.

4.1.3 Original Purchase Order Reference

The AS5023 specification placed the Purchase Order number in the header and the Purchase Order Line in the details section. This has the effect of limiting a Despatch Advice/ASN to a single Purchase Order. The GS1 XML schema has complete Purchase Order reference data at both header and line level (*purchaseOrder* element). In both cases, the Purchase Order reference may be with or without a Purchase Order Line Number.

It is recommended that only the line level Purchase Order reference data be used as this allows a shipment to contain items from multiple Purchase Orders. This will cover all cases, and using only one mechanism will give consistency in processing.

4.1.4 Despatch Advice vs Advance Shipping Notice

This same document serves as both a Despatch Advice and an Advance Shipping Notice (ASN). For a Despatch Advice, the *despatchInformation* → *actualShipping* element is used. For an ASN, the *despatchInformation* → *estimatedDelivery* element is used.

4.1.5 Supporting Documents

The GS1 XML schema has elements for several supporting documents, but only Delivery Note and Consignment Note are included in this version of the NEHTA standard. Both the Delivery Note and the Consignment Note can occur at the header level, or at a detail level using either the item level *despatchAdviceItemContainmentLineItem* element, or the packaging level *despatchAdviceLogisticsUnitLineItem* element through the use of the *despatchAdviceItemContainmentLineItem* child element. (As per 4.1.1 Item Perspective vs Packaging Perspective, either the item level or packaging level will be used, but not both.) At the header level only the document number is recorded, but both the document and line number is recorded at the detail level to allow the specific item to be linked to the specific line on the Delivery or Consignment Note.

These elements are all optional based on the schema definition, but if used then both the header and detail level elements must be used.

4.12 Delivery and Despatch Dates

4.12.1 Comments

The delivery date is located within two elements which form a choice group: *estimatedDelivery* and *actualShipping*. Each holds the same information but from a different perspective. The *estimatedDelivery* element should be used unless there is a specific request by the buyer for Actual Shipping data. These two elements also hold the actual shipping date.

The following section describes the component elements just once for both parent elements: *estimatedDelivery* and *actualShipping*. Except as noted, the component elements behave identically in both parent elements. Element paths are stated as relative to either of the parent elements as the name of the parent element is the only difference.

In *estimatedDelivery*, *estimatedDeliveryDateTime* is mandatory and all other elements are optional.

In *actualShipping*, *actualShipDateTime* is mandatory and all other elements are optional.

4.33 Expiry Date

Note: AS5023 identifies an Estimated Delivery Date as a data element at the item level. Delivery Dates apply to the whole shipment and so are held at the header level.

<i>AS5023 Reference</i>	Section: Detail	Group: Item details	Element: Dates
<i>Description/Comments</i>	The dates identified in AS5023 are: estimated delivery date; expiry date; best before date.		
<i>GS1 XML Path</i>	(Relative to despatchAdviceItemContainmentLineItem or despatchAdviceLogisticUnitLineItem→despatchAdviceItemContainmentLineItem) →extendedAttributes→itemExpirationDate		

<i>Basic Type</i>	Element
<i>Comments</i>	If there are multiple Expiry Dates for the item being despatched, then multiple <i>despatchAdviceItemContainmentLineItem</i> elements must be used. The strategy for processing multiple Expiry Dates will be linked to the strategies for Best Before Dates (4.34), Batch Numbers(4.31), and Serial Numbers (4.32).

5 Cross Dock Extension Elements

5.1 Comments

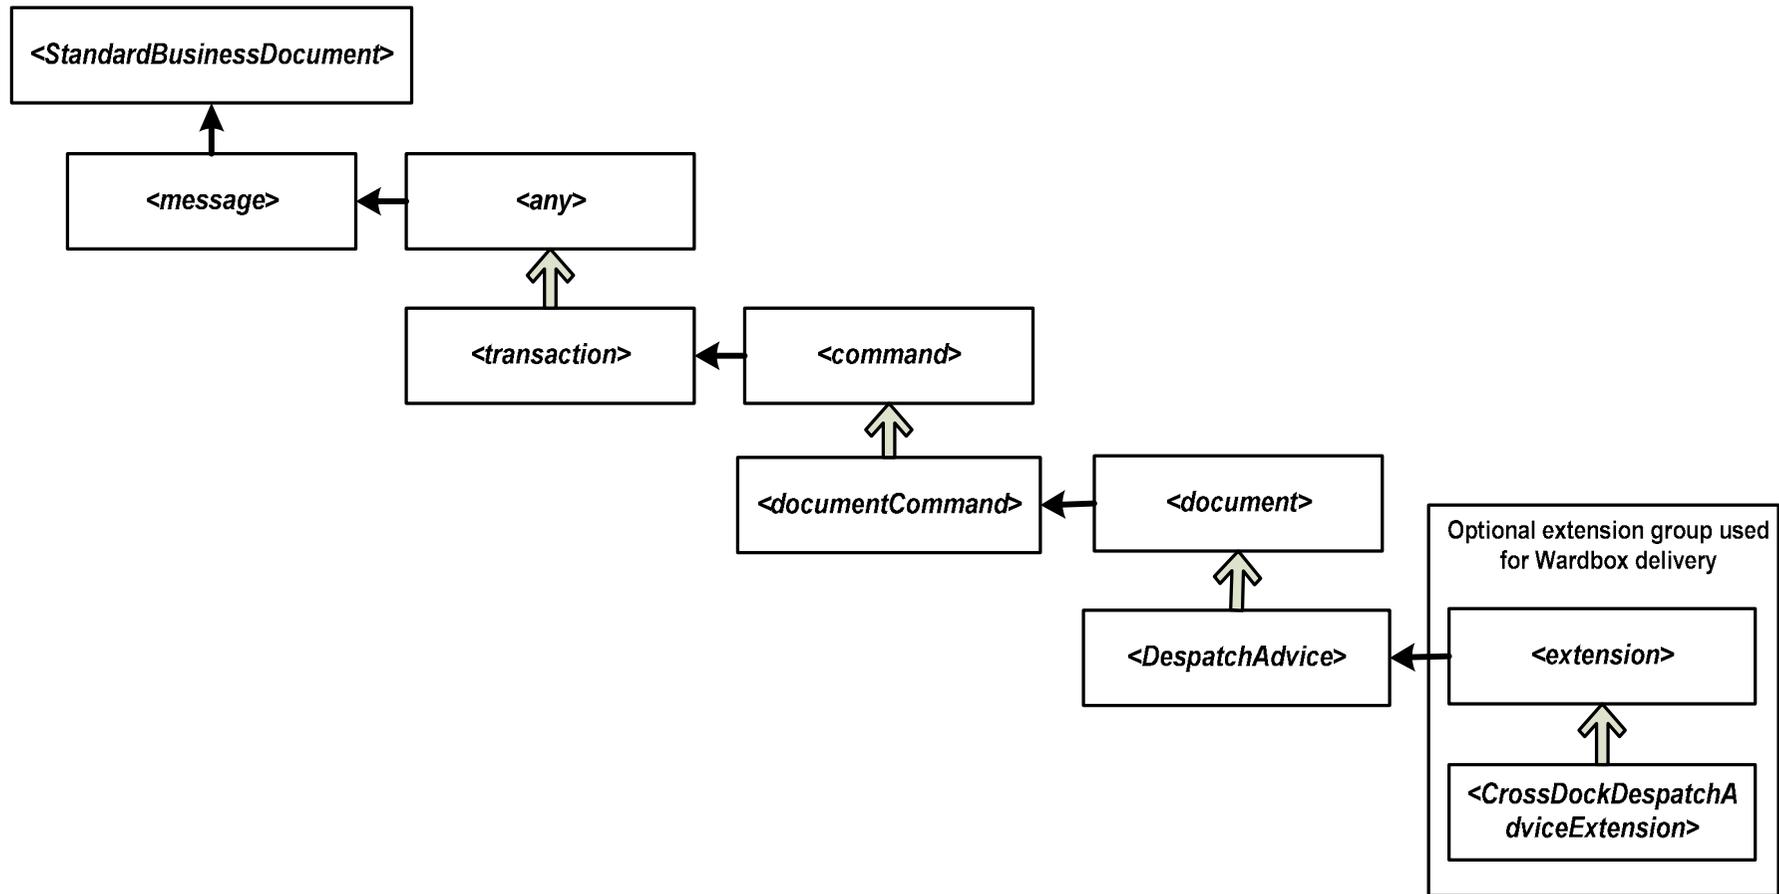

The 'extension<##any>' element at header level is optional and used for the business scenario where Ultimate Consignee or Wardbox delivery is required. The <##any> element cardinality is set to unbounded and can repeat either single or multiple times.

<##any> must be replaced by <deliver:crossDockDespatchAdviceExtension> element.

To populate the Cross Dock Extension the mandatory and conditional elements under 'despatchAdvice→despatchAdviceLogisticsUnitLineItem' must be populated.

The root Xpath for Cross dock extension is as follows:

despatchAdvice→despatchAdviceLogisticUnitLineitem→extension→ deliver:CrossDockDespatchAdviceExtension.

Comments	If multiple batches are contained within the package, then use one despatchAdviceItemContainmentLineItem element per batch.		
Schema Constraints	Mandatory: No		
	Data Type: float		
	Cardinality: 1..1		

	This element is mandatory if <i>despatchAdviceLogisticUnitLineItem</i> is used.
<i>Co-requisites</i>	(Relative to <i>crossDockDespatchAdviceExtension</i> → <i>shipmentPerUltimateConsignee</i> → <i>despatchAdviceLogisticUnitLineItem</i> → <i>despatchAdviceItemContainmentLineItem</i>) → <i>quantityContained</i> → <i>unitOfMeasure</i> → <i>measurementUnitCodeValue</i> (<i>string</i>) → <i>number</i> (<i>nonNegativeInteger</i>) → <i>containedItemIdentification</i> → <i>gtin</i> (<i>Global Trade Item Number</i> ⁹)

1.9 ⁹ This must be padded with 0's to the full 14 characters. See section 1.3 Global Trade Item Numbers - GTINs

Global Trade Item Numbers are used extensively to identify items. This field MUST contain a 14 digit number, so a 'filler 0' must be added to the front of the number if they are 8, 12, or 13 digit GTINs. For example, 9312345678901 becomes 09312345678901. This does not change the number at all, it is simply a non-significant digit added so this will pass schema validation.
