1 Introduction

1.1 Purpose

This document summarises the requirements for producers and consumers of Health Check Schedule Views produced by the national PCEHR system.

It also lists the specific conformance requirements that apply, in addition to those discussed in the *Common Conformance Profile for Clinical Documents* [NEHTA2014a]. Together, these two documents represent the complete conformance requirements for producers and consumers of Health Check Schedule Views.

1.2 Scope

The scope of this conformance profile is the use of Health Check Schedule Views in the context of the national PCEHR system.

1.3 Intended audience

The intended audience includes the following organisations:

- healthcare providers;
- vendors and developers of connecting systems; and
- software test laboratories.

2 Conformance requirements

2.1 Conformance requirements for producers

024697 **Objects of conformance**

Health Check Schedule Views **SHALL** only be produced by the national PCEHR system.

Priority Mandatory

2.2 Conformance requirements for consumers

Health Check Schedule Views **MAY** be consumed by:

- clinical information systems;
- CSP systems;
- registered consumer portals; and
- registered provider portals.

Note: National infrastructure of the PCEHR system will also be a consumer of Health Check Schedule Views.

2.2.1 Rendering requirements

A Health Check Schedule View is a CDA document and the rendering requirements for CDA documents (also called clinical documents) apply to software that renders a Health Check Schedule View.

The following rendering requirements apply in addition to the clinical document rendering requirements in the *Common Conformance Profile for Clinical Documents* [NEHTA2014a].

024699 **Presentation of links**

When the software retrieves a Health Check Schedule View containing narratives with clinical document links then the software **SHALL** either present the clinical document link text as a selectable link, or display the link text as plain text (that is, without the appearance of a selectable link).

Priority Mandatory

Additional A link is included in the narrative using a linkHtml tag:

Notes

```
<linkHtml ID="_id" href="URI">link_text</linkHtml>
```

where `_id` is an internal identifier, `URI` is a uniform resource indicator and `link_text` is the link text.

024700 Selecting a link to a clinical document

If the software allows a user to select a link to a clinical document, the clinical document **SHALL** be retrieved from the repository, rendered and displayed according to the requirements for downloading and displaying that type of clinical document.

Priority Mandatory

Additional Notes The requirements for downloading and displaying a specific type of clinical document are listed in the relevant conformance profile. The process of retrieving the target of the link requires implementation of the *PCEHR B2B Gateway Services Document Exchange Specification* [NEHTA2014b].

Glossary

Term	Definition
clinical document	A digital file containing personal health information about an individual, containing unstructured (narrative) information and optionally structured (atomic) information.
Clinical Document Architecture (CDA)	An HL7 standard intended to specify the encoding, structure and semantics of clinical documents for exchange.
clinical information system (CIS)	A system that deals with the collection, storage, retrieval, communication, and use of health related data, information, and knowledge pertaining to subjects of care. The system may comprise one or more applications or components.
conformance	Conformance is a measurement (by testing) of the adherence of an implementation to a specification or standard.
consumer	In this document 'consumer' refers to a software system that has the role of being a consumer of Health Check Schedule Views.
contracted service provider (CSP)	An entity that may offer health software as a service, and support access to the PCEHR system on behalf of healthcare organisations. A CSP provides under a contract with the healthcare provider organisation: a) information technology services relating to the PCEHR system; or b) health information management services relating the PCEHR system. (Section 5 PCEHR Act [COM2012])
CSP system	A software system operated by a CSP that deals information and knowledge pertaining to subjects of care [AS5021]. The system may comprise one or more applications or components. A CSP system may perform some or all of the functions of a CIS.
healthcare consumer	A person who is the subject of care. (For the software system, see 'consumer'.)
HL7	Health Level 7
MAY	When appearing in a conformance requirement, the verb MAY indicates an optional requirement.
PAI-R	PCEHR assigned identifier for repositories
PCEHR	personally controlled electronic health record
producer	In this document 'producer' refers to a software system that creates Health Check Schedule Views.
registered consumer portal	A third-party ¹ portal used by healthcare recipients to access information on the PCEHR system.
registered provider portal	A third-party portal used by healthcare providers to access information on the PCEHR system.
registered repository	A third-party repository used to store clinical documents and other clinical data that connects to the PCEHR system. A repository may either store clinical documents in a proprietary format or a CDA format.
SHALL	When appearing in a conformance requirement, the verb SHALL indicates a mandatory requirement. Its negative form SHALL NOT indicates a prohibition.

¹ Third-party refers to a software system developed independently of the national PCEHR system and intended to connect to the national PCEHR system. The portals provided by the national PCEHR system are not registered consumer or registered provider portals.

SHOULD

When appearing in a conformance requirement, the verb **SHOULD** indicates a recommendation. Its negative form **SHOULD NOT** indicates an option that is not recommended.
