Release 12 – Vendor Release Notes

Software Vendor Test Environment

Version: 2.0.0

Date: 15/04/2021

Contents

1. Release 12 – SVT Deployment Schedule.....	3
2. Release 12 – Summary of Changes	3
2.1 Immunisation Enhancements Phase 2	3
2.2 [Optional] Vendor Testing in SVT	4
3. Issues in Release 12	4

1. Release 12 – SVT Deployment Schedule

My Health Record Release 12 will be deployed into the My Health Record Software Vendor Test (SVT) environment after **5:00 PM (AEST) on Thursday 15 April 2021**. All functionality of the SVT environment will remain available. Please note, the environment upgrade is outside of the advertised available hours for the SVT environment.

2. Release 12 – Summary of Changes

Release 12 of the My Health Record (MHR) system is focussed on delivering functional and security updates and includes new Immunisations Enhancements.

2.1 Immunisation Enhancements Phase 2

Immunisations Enhancements Phase 2 introduces some key functionality for users in relation to the information available in My Health Record from the Australian Immunisation Register.

Services Australia will now be sending new and critical information through to the My Health Record system via FHIR and via a new Immunisation History Statement on-demand service. The new information will be integrated within the existing Immunisations View in the NCP, NPP and via CIS B2B. The My Health Record mobile gateway will be enhanced to include the Immunisation History Statement at a later date. The Immunisations View will pull immunisations information from a consumer's AIR document and also from Shared Health Summaries and Event Summaries.

The Immunisations View will now present the following immunisations information:

- COVID Status information
- NIP (national immunisation program) Immunisation Status
- NIP Schedule
- Next Immunisations Due
- Overdue Immunisations information
- Notices information (medical contraindications, exemptions etc)
- The vaccine vial and batch number for providers via NPP

The NCP Record Home page and NPP Health Record Overview will display COVID Status, NIP Immunisation Status and alerts for when the user's second dose of the COVID vaccine is due and overdue.

Release 12 Immunisations Enhancements delivers a new CIS version of the Immunisations View. It will be a CDA-based view available via the getDocumentList webservice. **Vendors will not have to make any changes on their end to retrieve the view.**

For Immunisations View to be returned, a SHS, EVS or AIR document must be present within the MHR system. If none of these documents are present, then the Immunisations View will not be returned.

Immunisations View will return in the following `getDocumentList` scenarios:

1. When no filter is applied; or
2. When any of the following are provided within the request as the document type or class code:
 - a. '100.16659', (ACIR)
 - b. '100.17042', (AIR)
 - c. '60591-5', (Shared Health Summary)
 - d. '34133-9', (Event Summary)

2.2 [Optional] Vendor Testing in SVT

Vendors can begin testing the new functionality in the SVT environment on 19 April 2021. Please note that this testing is **optional** and that there are no changes required to CIS/CSP vendor products as part of this change.

As user-interfaces are specific to each product, it is not possible to provide a screenshot as to what the new Immunisations view should look like in a vendor's product. However, test data and descriptions of expected results will be provided post go-live to assist.

Vendors who choose to participate in testing between 19 April – 21 April should perform a `getDocumentList` call for Immunisations View with the test data that will be distributed.

If issues are encountered during testing, please email MyHealthRecord.SVT@accenture.com with the following details:

- Request/Response XML files
- Screenshot
- Date and time of testing performed
- Explanation of the issue encountered

Thank you in advance for your participation.

3. Issues in Release 12

As per the table below, there are currently 4 open defects impacting the new Immunisation views in the MHR portals and via B2B. These defects are planned to be resolved on 19 April after business hours. The status of these defects will be updated when the test data is distributed to vendors on 19 April.

Defect ID	Summary	Status	Impact on Vendors
HDM-3256	NCP/NPP - Immunisation status is not visible in the Immunisation page when Immunisation status code is "Y" in IHS stub file	Open	Will impact vendors attempting to view immunisations details via the portals.
HDM-3280	Mobile NCP-Immunisations view page: Focus order issue on Notices	Open	Will impact vendors attempting to view immunisations details via mobile apps.
HDM-3283	B2B Immunisations view- Immunisations status update and text change in the CDA narrative	Open	Will impact vendors attempting to view immunisations details via the B2B immunisation view.
HDM-3279	COVID Alerts are displayed on HRO page even there is no AIR document uploaded with COVID codes on NPP portal.	Open	Will impact vendors attempting to view immunisations details via the portals.
