2.3 Patches	4

1. Release 13.0.1 – Production Deployment Schedule

My Health Record Release 13.0.1 will be deployed into the My Health Record Production environment **on Thursday 27 January 2022**. All functionality of the Production environment will remain available. There is still a risk, that there may some impact with how vendors interact with the My Health Record system. **Therefore, it is recommended that vendors perform connectivity testing in Production on Thursday, 27 January 2022 once the Release is complete.**

2. Release 13.0.1 – Summary of Changes

Release 13.0.1 of the My Health Record system is focused on delivering functional and security updates. This includes:

- Updates to the National Consumer Portal (NCP), National Provider Portal (NPP) and Immunisation Consolidated View via B2B Gateway to display an on-screen alert a month before the recommended booster duration. Consumers who have set SMS/email notifications will also receive a notification a month before the recommended booster duration.
- Updates to the National Consumer Portal (NCP), National Provider Portal (NPP) and Immunisation Consolidated View via B2B Gateway to display an on-screen alert when the record owner is exempt from receiving COVID-19 vaccines due to medical contraindication.

This document outlines the functional updates and patches that vendors should be across in preparation for the deployment.

2.1 Booster Vaccine

A change will be made to the NCP in the COVID-19 Dashboard page to display the recommended due date for booster, a reminder for COVID-19 booster dose one month before the recommended due date (with link to make a booking), and administration information once the booster has been received. An alert will be presented to the consumer on the NCP Record Home page. Consumers will be able to view a booster dose alert under the Next immunisations due section on the Immunisations page and, once they've received the booster, the COVID-19 booster dose details will show in the Immunisation history section.

A change will be made to the NPP to display a patient's COVID-19 booster dose administration information on the Health Record Overview page (once the booster has been administered). A provider will be able to view when a patients COVID-19 booster dose is due on the NPP Immunisations page, one month prior to the due-date.

2.2 Recent Medicines and Medical Contraindications

A change will be made to the NCP COVID-19 Dashboard to display an alert in the Vaccination tiles when a consumer has a medical contraindication. The alert can also be

viewed on the Record Home page under the Alerts, Reminders & Notifications section and the Immunisations page under the Immunisations status section.

A change will be made to the NPP Health Record Overview page to display a warning alert when a patient has a medical contraindication. The NPP Immunisations page will also be changed to display the warning alert under the Immunisation status section

2.3 Patches

As part of Release 13.0.1, patches will be deployed to the Oracle HTTP Server to maintain the security posture of the MHR system. The patch release notes from Oracle do not suggest that there will be any impact to vendors, however there is still a risk that these patches may impact how vendors interact with the My Health Record system. Therefore, it is recommended that vendors perform connectivity testing in Production post go-live.
